1422. latest revs. of Ice-T and FlickerTerm80?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-15 00:00:00 UTC
From: Bill Somrak <cooncat@ncweb.com>
Message-ID: <3149D7EE.3B6B@ncweb.com>
Source record: 85296

Hi all,

Someone I know is looking for an 80 character term program for the Atari 8bit. I have some older version of Ice-T and Flickerterm, but wonder where the latest revs are on the 'net. I'm actually a registered Ice-T user ... but I believe that the newest versions of either Ice-T or Flickerterm will only run on 130XE's and not 800XLs, which is what this friend is running. Any info will be appreciated.

To All Customers and anyone reading this. My E-Mail is screwed up. I am not receiving my E-Mail and others I send E-Mail to are not receiving E-Mail from me. I know this for sure because, I have called several of my Customers and they confirmed this. Until this passes, the best way to reach me is by phone. If you send E-Mail to Bravo Sierra Computers and don't receive a reply in a week, call me (here in Oregon.) at (503)256-9974 Best time to reach me is 3 PM - Midnight, Monday - Thursday and Friday from 3 PM - 6 PM Pacific Standard Time. If I'm away from the phone, leave a message with your Home Number and the Best time to reach you. If your calling from outside the United States, I can't call you back, so Please, Try Again. Hopefully, my E-Mail clears up soon. I wanted you to know so you didn't think I was snubbing you.

==Thanx==

1424. Re: Lifetime of Floppies?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-15 00:00:00 UTC
From: bmarcum@iglou.iglou.com
Message-ID: <DoBxBF.L31@iglou.com>
Source record: 85298

Most cartridges are mask-programmed ROMs, not EPROMs or EEPROMS. They should last as long as any other chip in the Atari, probably longer unless you leave the same cart plugged in constantly. On the other hand, if you are constantly plugging and unplugging them, the connector could wear out.

Mask ROM=1's and 0's are etched in the chip when it is made.
EPROM=erasable programmable ROM; programmed electrically, erased by ultraviolet light.
EEPROM=electrically eraseable programmable read only memory; sometimes called "read mostly memory".

I'm not sure how complete it is, but I got my copies of
the nzt from
#ftp.funet.fi, in the if-archive.

I haven't looked there so I don't know what they have, but I have
several issues that I could loan to someone if they wanted to scan
them and load them somewhere. Right now I don't have a home
page (that will change soon) nor do I have a way to scan them in.
Color wouldn't matter since there aren't any colors in the issues
I have anyway. I don't know if any came with color or not.

1427. sol. for Mercenary

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-15 00:00:00 UTC
From: Nir_Dary <nirdary@pacificnet.net>
Message-ID: <3149D8EF.2C5D@pacificnet.net>
Source record: 85301

Solution to Escape to Targ: Mercenary 1

A: Buy Dominion Dart after you crash on Targ.
B: Fly to 09-06, get the SIGH, ENERGY CRYSTAL, MEDICAL SUPPIES, CATERING PROVISIONS. (N.B go through transporter in the room with the MEDICAL supplies to get the PHOTON EMITTER)
C: Fly to 81-35, get GOLD and KEY (for COLONY CRAFT HANGER)
D: Fly to **_**, get WINCHESTER, and board the CONCORD craft
E: Fly to COLONY CRAFT (08-08). Sell WINCHESTER in LABORATORY, CATERING PROVISIONS in KITCHENS, MEDICAL SUPPLIES in INFIRMARY, GOLD in EXCHEQUER, ENERGY CRYSTAL in POWER ROOM. Get KITCHEN SINK
F: Fly to 09-06. Get COBWEB (with KITCHEN SINK, it will open all doors.)
G: Fly to 09-05. Get ANTENNA, NEUTRON FUEL
H: Fly to 03-00. Get ESSENTIAL 12939 SUPPLY, MECHNOID.(if wished, fly to **_** to get the DOMINION DART)
I: Fly to 11-13. Get USEFUL ARMAMENT
J: Fly to COLONY CRAFT. sell MECHANOID in INTERVIEW ROOM, NEUTRON FUEL in ENGINE ROOM, 12939 SUPPLY in CONFRENCE ROOM, USEFUL ARMAMENT in ARMOURY
K: Fly to 09-06. Go to COMMUNICATIONS ROOM. Rent a spaceship. Fly to 08-08. Board ship and leave TARG! if you dont have any maps of the locatons, do take the time to wander around TARG, if not for the sake of completing the game, then just look about and enjoy the scenery and Poul Woakes' humor.

This solution was done by Roy Griffith and was posted at the New Atari Magazine Issue 58

#It's comp.binaries.atari, and there's no one using it.
#It's definitely here on CRL's server, so quite possibly it's on other
#servers.
#Let's start using it :)

The only official binaries group is comp.binaries.atari.st and it
is supposed to be just for ST software. At least that is what the
charter says. This has all been discussed before and it is always
determined that that is not the right place to post binaries even
if we put 8BIT in the subject line. Now that it seems that no one is
posting ST binaries there either, I say lets go ahead and use it.
To hell with the charter. The worst that can happen is that the
messages will get cancelled and we'll get some nasty email.
Just another ordinary day. Who goes first?

Source record: 85209

In a message dated 3-14-95 maffia@fox.CS.Berkeley.EDU (ANTHONY_WAYNE_PETER MAFFIA) posted the following from a post reposted from another newsgroup:

> "5) If you don't defend your copyright you lose it.
>
> False. Copyright is effectively never lost these
> days, unless explicitly given away. You may be
> thinking of trade marks, which can be weakened or
> lost if not defended."
>
>

I wonder what the author of this article made of the Xerox vs. Apple suit, which occurred soon after Apple's "look & feel" suit against Microsoft several years ago? As I recall, the main reason cited by the judge in the case for the decision going against Xerox was the time they waited to claim any infringement on their Xerox Star interface. Of course, this all took place before the 1989 changes to the copyright law.

In another case, Intel lost a suit against NEC over their 8088 & 8086 compatible V-20 and V-30 chips due mostly to the fact that a large number of Intel 8086 chips were sold at one time with no copyright marking (an item that was changed in 1989, as the article you reposted noted).

The problem is flow of the media over time. The data is distorted and
eventually would not be readable. I have heard the life of a worm disk is 10
years and 5 years for rewriteable optical. I would expect CD's to be along the
line of a worm. I also expect they will last 20 years or better, but not
forever.

Not a bad idea. Personally, I'd like to see alt.binaries.comp.atari8bit
become a well supported group (I guess it's my baby... =)), but
since that may take a while to happen, why not crosspost to
both groups?

As each of the issues of the "new" 'Atari Classics' have come out, I have reviewed them. Each has gotten a very poor review (and from emails I have recieved, as well as posts made here, I was not alone in finding the magazine content lacking). I began to wonder whether I should renew my subscription, when it is time for that.

Now that the new issue is here, however, I am feeling better about renewing my subscription. What follows is a summary review of the issue.

Correspondence: The "E-Mail Yes" letter was informative, but the rest of this section was useless to me. But, that's just me and my needs. There are probably others out there who could use the "Head Parking" information, among others, and I'm glad those letters were printed.

Report From England: Richard Gore's article was informative and enjoyable. It gave me an insight into the A8 community of England, and I'm glad I read it.

Turbo BASIC XL: I skipped this article, because I have tried TBXL in the past, found it worthwhile, but also found that I prefer BASIC XE.

A-T-A-R-I: The alternate uses for Atari computers presented in this article were neat, but it left me wanting more. Maybe a full-length article could be done in the future?

Basic Skills - Soldering: WOW! Thanks, Bob Wooley, for writing this article. While I was able to get through the Super Video 2.1 upgrade using my bare soldering skills, this article will help me in future projects. I was pretty much shooting in the dark in the past, when I soldered. I did things that I had heard were "the right way," but I didn't know why they were "right." Now I do. Not only that, but I picked up more than a few tips in the article. Finally, the parenthetical note on wood-burning sets was an excellent aside. Indeed, in these days of blaming TV for kids setting things on fire with parents' lighters, who would consider providing a child with a red hot woodburning iron? Yet, many of us grew up with these, and even more potentially dangerous toys and craft items - without ill effect! It makes you wonder . . .
I'd like to see an article along these lines in each issue, until all the fundamentals of hardware hacking have been covered.

GENie At 9600 Baud: Decker McAllister, Jr. does a good job of explaining the use of a 14.4Kbaud modem with the 850 interface. I went through this with my Practical Peripherals 14.4 FXMT modem about a year ago, and I know it's not simple to figure the proper init string out by oneself.

Perhaps a catalogue of proper init strings for each modem could be kept by AC, or some nice user with a website?

Secrets of PaperClip: I enjoyed this article, even though I do not have and never plan to purchase PaperClip. Even though I favor AtariWriter+, knowing the features of other available word processors is never a bad thing. If I need a feature that is only available in another product, I'll be glad I know of it. I'd like to see an article like this in each issue.

Hole In One...: Uh...ok. Jack Lea spins a tale (true story?) of Atari fantaticism, but it lacks punch. It was enjoyable to read...to a point. At the end of the page, I expected it to continue, but it did not. I can definitely see a place for this sort of material in AC, but next time perhaps the author will give his or her work more of the qualities of a story - conflicts, resolution, etc. There were conflicts,and there was a resolution of a sort. But it was unsatisfying, to me. It started out as a story of engrossment in a videogame, turned into a story of conflict with an obsessive gamer, then turned into a story of the conflict between Atari-obsessed husband with an unsympathetic and derisive wife. Perhaps if Mr. Lea had been given a couple more pages, he could have put together a more coherent story. Again, I'd like to see more of this sort of material (one three- or four-page story per issue, perhaps), but with more "oomph."

PoolDisk Review: Bob Wooley one again writes a masterful article, detailing enough about the PoolDisk CD-ROM for the reader to make an educated decision on whether to make the purchase. Excellent use of column-inches. :)

Controlling Servos: Bob Wooley does it again! Wow! This is just the sort of article I used to love reading in ANALOG. This is an excellent example of an article that provides the reader with something he can use - something new to do with his favorite electronic device. One article of this type should be an absolute must in every issue.

Adieu Atari?: Would have liked to see some commentary on this, but I am glad it was included as every Atari fan should have the chance to see the actual WSJ article that broke the story.

General Comments: The cover was great - so many things to look at! And the title page finally has the email addresses of Bob Wolley and Jim Hood, thankfully. This will allow prospective authors to easily contact them. I had the Devil's own time contacting Bob Wooley about writing an article for AC, as the only email address for him I could get was an account which he apparently only checks once in a blue moon.
This issue was worth the cover price - which is all I ask from any magazine I subscribe to.
Thanks for the great work on this issue, guys. Keep it up!

-Joe

I'm seeking info on a company that purchased all of Wes Newells Memory
& other upgrade boards for both 8 bits & Atari ST computers. These
boards I assume were going to be continued to be sold by this 8 bit
retailer I believe. If anyone here has any info on weather or not
this company still exists, I'd appreciate some info on them. I'm
trying to locate one of Wes's TOS 2.06 board to upgrade me Mega ST to
TOS 2.06 since my Codehead board is broken and Wes's board we extremly
cheap compared to the others. ($29.95 I think) vs $100+..

E-mail to m.harvey@ix.netcom.com
Thanks

With a CD, the edges of the reflective substrate begin to oxidize first, breaking down the outer area. After that, oxidization begins to penetrate deeper into the CD.

It's a pity, that all modern archiving material is putting information at risk. The only way this information will survive is through massive proliferation of media, which we are seeing now.

>If someone is really interested in, I can also write an article for
>a publication or so about it. But, well, 8 bit times are gone...

Dear Andre,

no, this is not true. Small microcomputers based upon an 8 bit data bus are
still a good catch for a lot of purposes. I built a 6502 system with 32 kB RAM
to control my self developed digital audio codec. The system has only a
bootstrap EPROM, a serial port based upon an 6551 ACIA and some PIA and VIA
chips to connect a SP/DIF-transceiver, several ADC's and a DAC with my
microcomputer. The EPROM contains only a very small amount of code. After
reset, the code reads from the ACIA the program which will be run immediately
after loading. Since I'm still developing new features, I wrote a simple
debugger which can be used as a system monitor as well as a core of an
operating system. As a system monitor my debugger is very similar to popular
debugging tools like debug (for DOS) and SID (for CPM). As a core of an
operating system, my debugger is not quite advanced. It has no disk I/O. All
inputs and outputs must be done with the serial port. But it has some
procedures which can be invoked from the IRQ signal. The IRQ serves the
serial I/O and the PIA and VIA chips - like many other 6502 microcomputers.

I have the idea to expand my code to a realtime system with multitasking
properties, because several operations must be controlled simultanously. I
shall use a clock signal, which will be generated by one the timers, which are
themself a part of the VIA chip. Each clock tic generates a time slot. This
mechanism can easily be used as a base for a multitasking system.

An operating system for the 6502 should have some of the properties of CPM.
Parameters could be passed into registers and some zeropage locations.
The operating system should be invoked with the BRK instruction. This was my
latest idea. But it seems so far, I am to late. I do not know, if your system
works in this way, Andre. I have not seen your code until now. But you have
done the job. My congratulations.

Regards,
Holger Bruns

PS: If anyone wants to get more information about my homebrew 6502 system:
Please send me a mail. But be warned. The comments of my debugger are written
in German. I could write an English version, but this would take some time.

Message-ID: <4igema$66k@news.rain.org>
Source record: 85225
Cross-posted to: comp.sys.atari.8bit,misc.forsale.computers.other.software

I am posting this message for a friend without Internet access.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. I will guarantee
all disks and cartridges work or I will refund your money.

Atari ST 3.5" software - $3 each
E-Z Track MIDI Sequencer - new, unopened (2 of them)
Personal Pascal *
ST Key *

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk -- will trade

The above prices do not include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how
heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or
priority US mail. I don't have time to deal with lots of small transactions,
so I need to ask a minimum of $12 worth of items. I'll pay all shipping if
you buy (almost) everything.

I will only ship within the continental UNITED STATES. No exceptions.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the
message or in the subject header: "Forward to Randall". Because these
messages will be hand-carried on floppy disk once per week, it may take
me a little while to respond.

All well & good BUT the 6502 does not have a relocatable stack pointer
so your kinda left with a bit of a problem when it commes to
multitasking, ie you cant give each process it's own stack without
copying the whole stack (maybe just to the current sp value?)during
each context switch.

After I received some mail, I thought I should give some more info.
Besides that I'm going to port the kernel startup and the video
device to the C64 to actually show how to do some porting.
It should be working within a week (I have many other things on
my schedule...)

so long
Andre

The MMU, which I used in my homemade system is non of the ususal
68xxx or something, it's a 74ls610, a 'standard' TTL chip.
Because of this it has no resemblence with the C128 or C64 so
called MMU. It has 16 registers with 12 bit each (only 8 are used)
that expand the upper 4 address bits to 8. I.e. the contents of the
appropriate register is used as the upper 8 address bits, while the
upper 4 CPU address bits are used to select the register.
So the computer can - indirectly - access 1 MByte of memory.

I have no idea of how this resembles the Atari or 65816 memory management.
The idea of the MMU is to switch between different memory environments
for the different tasks. Other page sizes or even other mechanisms should be
working too after some development.

With a MMU, the computer can run the same program multiple times,
without any change. Each task has its own memory.
But then, it's slow: for each timing critical task the multitasking
has to be switched off by a SEI statement.
This slows the system down. Sending infrared commands for the
audio equipment needs to shut down irq handling all the time
during the send - characters may get lost on a serial line, for
example.

Without a MMU, only programs that use different memory locations
can be executed. The stack is divided into several areas, thus

shortening the stack for each task but allowing several tasks
to coexist. This version is a bit faster, as no MMU handling has to be
done, but this doesn't do much. Without MMU, in contrast to the version
with MMU, an NMI routine is available, that might be able to handle
very time critical stuff.

The memory needs depend on what you do with the system.
The kernel itself needs 4kByte of ROM to run in, not more. The total ROM
size depends on which programs you put in the ROM. I have a 32kByte
EPROM with kernel, fsiec, fsibm, fsdev, shell and monitor, stdlib,
and many devices.
With MMU you have to have 4kByte RAM for the system, and at least 4kByte
for each task. Devices need 4kByte only of they don't use the
kernel page.
A system without MMU can pack the used memory locations much better,
so it should be running fine in 8kByte (which I haven't tested, though).
32kByte are almost always enough.

To port the system to, e.g. the C64, you have to take the version
without MMU, of course. The kernel is hardware independent, there just
have to be some irq sources (handled by devices) to allow task switching
when a task is interrupted (in my homebuilt computer there is a 50Hz irq
line). The startup code has to be modified for the CPU registers.

Then the video device has to be modified to handle the VIC interface
and the C64 keyboard, may be also allowing several consoles.
The fsiec filesystem has to be modified to handle the C64 serial bus
interface.

Then a first test version should actually be ready to go, with
fsiec, fsdev, null device, spooler device and video devices.

Hm, that sounds to simple to me that I wonder why I haven't done it
before...

I do not sell any hardware, nor do I build them for free ;-)
The boards I have are completely handwired and I will never
give them away.

Some conners, like 200Meggers, will not let you disable parity & useless
unless you get the parity chip from puff, mine must be busted since it
doesn't work anyway, (on the ST, PC it works)
Other conners like 1060S (fast 1 Gigger) lets you disable parity &
may work!
I use a Quantum LPS52S or something like that, and it works like a charm
with the XE.

The files appear to be corrupt. You are loading dos without basic right? They should boot up and give you a menu to select from on the screen.

I also have found that files Diskcomed with the older versions of Diskcom will not undo on the latest version so you may have to hunt down earlier versions to get files up and running properly.

On the Commodore 128, one of the few useful things their MMU actually does
is to allow the user to relocate addresses $0000-$00FF and $0100-$01FF to
any page in memory. With such an MMU a full multi-tasking operating system
can become a practical option since tasks can freely use zero page and stack
without needing to allocate them; they can then access the rest of memory
using indirect indexed or indexed indirect addressing (which if they have all
of zero page to play with should be quite adequate).

>works in this way, Andre. I have not seen your code until now. But you have
>done the job. My congratulations.
>

There are two problems with the above:

1) Passing parameters via registers is not such a great idea on the 6502 because,
as you know, there are only three of them. It's very difficult to convery
any amount of information in 24 total bits of data. At best you get on address
and one byte of data. Not enough really.

2) Passing parameters via zero page has problems with the fact that your code will
NOT be reentrant. If you propose to do ANY multitasking whatsoever, you must
write reentrant code. If you don't, the following will happen:

1. parameters are installed and program jumps to routine

2. timer interrupt comes in and invokes the dispatcher which then
decides to give time to another task

3. other task determines that the same work needs to be done calls the
routine of step 1

4. the routine completes and the processor returns to the original task

5. the original task pulls its parameters out of ram only to find that
they were corrupted by the last task who stored its parameters in the
some block of RAM.

The way to get around this is to pass all parameters on the stack, and use separate
stacks for the separate tasks.

Hope this helps...

Michael Ellis

>ANYTHING, even Happy, but was consistent for use in copy protection.

Interesting.
So can you answer this question?
In the Happy Backup program, there is a "Special Recovery Menu"
which allows you to change a variety of things _including_ the
number of sectors needed in a track. That, along with increasing
the number of scan retries makes it virtually impossible to
"outwit" Happy.

Well...short of zapping a sector with a laser beam, that is.
And it's my understanding that it was never done on any
software for the Atari 8bit platform.
Anyway, you can go all the way up to $FF (ludicrous, to be sure)
but what was the point of including the capability to do such a
thing in the Happy software/hardware if it wasn't ever needed?
Not $FF - but your example of 23 is only 5 more than the standard
18. (Happy's default)

Why should 23 sectors be uncopyable?

In article <4i7p40$1pu@nyx.cs.du.edu>,
Uncle Fester <thester@nyx.cs.du.edu> wrote:
> All the talk of alt.binaries.comp.atari8bit and the
> other alt.binaries.warez.atari8bit seems to have
> disappeared.

;The talk died down because I think most people agreed
;it would be a good idea. Alt.binaries.comp.atari8bit is
^^^^
Oscar Oscar Oscar (done in my best Felix)
I counted maybe 12 or so people that responded to the thread
with at least 6 of them saying it was not a good idea for
one reason or another. The only reason why no one is responding
any longer IMO is you lost the argument on any moral, legal,
plurality, or common sense grounds, but decided to proceed
anyway. As for me, I'm only comming off the wall to let you
know that silence from here on out is not a vote in favor of
violating copyright laws.
;a valid newsgroup on most news servers. If yours
;doesn't carry it, ask your admin to do so. There have
;only been a couple of posts to the group, and the distribution
;is kind of spotty (that is, some news servers saw the
;messages, some didn't). I suggest posting some tests
;to see if anyone else can see your messages.

;Alt.binaries.warez.atari8bit is a dead group. It
;wasn't created through the semi-proper channels and
;was removed on most news servers. Don't bother posting
;to it.
Suprise!

>And is anyone setting up a site for Classic Atari Software?
>(meaning - old, unavailable anywhere for sale, copyrighted stuff)
Ones man meat is another mans poison. I get sick of the constant
post here with classic software forsale. Ralph Maddox, Bob Klass,
& a few others completely excepted. But I have to admit, at least
Ben Smith isn't making what seemed to be daily updates of his sale
list anymore.
I just picked up carts, Hardball, Rescue on Fractalus, and
Donkey Kong Junior last week, all new in box for $5 each: Not that
hard to find.
;A couple of people have shown interest in providing a site
;for this stuff. I'll post an update as soon as things are
;more ironed-out. If you (or anyone else) has the resources
;for this kind of thing, please let me know.

Not me, combination of indifference & laziness, but I'd bet dimes
to dollars if these sites come up in the USA, there will be
someone *somewhere* that will complain & shut her down.
This'll happen as soon as someone like Philip Price sees the AR
series go up for instance. Ditto for stuff like Temple of Apshi
where the original author is still active, even if the software
house like Epyx isn't.
One more piece of advice that, likely to be ignored <but what
the hey!>: If there is a site that goes up, tell people via email
vs a public post. Just as a common courtesy for people who don't
want to see the group's collective reputation lowered.

> The thread titled "The Undieing Copyright Issue" was
> ironic. We're talking of a dieing (dead) platform here.
> Adhering to copyright law at this stage is a little
> like suffering from anal retention. What's the point?
> It all has to come out eventually.
;The platform is commercially dead, but the copyrights issue
;is alive and well in many aspects of our society.
Matter of semantics, but if it is truly dead, then why are you
bothering with copyrighted software? "Abandoned by commercial
software developers" & "No longer manufactured" are a little
more accurate. I own a 4WD '83 Ranger & while it hasn't been
manufactured in years, Ford wishes I would just by a new truck,
& it runs terrible, but it is not quite dead yet. Truth be known, I
am more fond of my 8 bit then that truck! But it ain't dead.
Further, your talk about taking over/sharing the .bin.st group
has already been tried W/O sucess. Those guys are just the kind
of weenies that will get you chastised by your sysadmin for posting
copyrighted material to an 'inappropriate' news group. They will be
able to generate that power/authority with your sysadmin due to the
nature of what you are doing. Once again, ask your local sysadmin
first before you do something that is likely to embarrass them. Then
again, just get an AOL account & it will seem average for the
species<sic>.

;Thanks for your comments,
;Oscar
You <two>too. I don't need to know the site name, but if it
survives 3 months, you can let me have it with a "I told you so!"

I have a boxfull of 800XL bits and pieces. Is it possible to hook this
up to the 'Net or should I pension it off and sell it all ?

I'm not that bothered about web-sites. I'm more interested in e-mail
and newsgroups.

I have a couple of 1050's, an 850 I/Face, an XEP80 (80 column display
thing)and loads of other odds and sods.

What else do I need ?
Are there any modems with a decent baud rate which can be used with an
850 ?
What software do I use ?

I supoose this sort of thing gets asked several times a month so
apologies for being boring :-)
I found this group by accident and hadn't really thought of using an
8-bit Atari on the 'Net.....This groups here, so I suppose it must be
possible.....??

Message-ID: <314E04D2.9A4@ncweb.com>
Source record: 85245

Hi all you old time hardware hackers!

I was chatting with the author of Ice-T (comm. program), and we got into discussing the Axlon Ramdisk handler that my old 288k Atari 800 is using. His question was: "what type of memory banking scheme does it use, and what is the starting address for the banks"? I wasn't sure, since I had no info on this .. I only know that it works, and that it works DIFFERENTLY than the 16k banking format of the 130xe (and its clones).

Can anyone help, and either post the info here, or send it to me, so that I can forward it to Itay??

TIA

I've noticed a reverse problem with the thrift I frequent:

They seem to think that *any* joystick works with *any* system
and that each system needs at least twice as many joysticks as
it has ports. I didn't really mind this too much (hey I've got
2 ataris and seven joysticks :) except for the fact that I'm
looking for just *one* 7800 joystick. Unfortunately all the
7800 joysticks (4 of them) were stuck in a package with a 2600jr
and the price was raised just above what I'm willing to pay.
And, of course, it's against store policy to break up packages..
no matter how high up the food chain the person is you're talking
to.

Argh,

Jay

1476. MULE wanted

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-18 00:00:00 UTC
From: lwright@wintermute.awinc.com
Message-ID: <4ijdac$o9v@kryten.awinc.com>
Source record: 85251

I'm looking for a copy of MULE I can give to my father as a birthday present.

I know it's a long shot, but if you've got one you'd like to trade or
sell, please email me. Send replies to lwright@awinc.com, replies to
this post will most likely bounce.

L.

1477. NULL modem cable

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-19 00:00:00 UTC
From: areeve@avana.net
Message-ID: <4il62r$a96@tiger.avana.net>
Source record: 85252

I'm trying to transfer various files from my old Atari 130XE over to my PC via a null modem cable. With my hookup using the Express cartridge and ProComm Plus for Windows I can send data from the Atari to the PC, but can't send from the PC to the Atari (i.e. it's a one way transfer). I'm using 8N1 and half duplex as I suspect I should and have hardware handshaking disabled. If anyone has any clues that could lead me to getting this to work properly they would be much appreciated as I've spend many hours pondering over this.

I seem to recall getting this to work on my ST and even tried that with the same results as above.

- Thanks, Alan

1478. Atari 8bit BBS List: UPDATE 96-03-18

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-19 00:00:00 UTC
From: oscar@primenet.com
Message-ID: <4iloci$13@nnrp1.news.primenet.com>
Source record: 85253

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

The format of the individual entries is below. Note that each entry uses
four lines. "Type" indicates the type of hardware used to run
the board. "Status" is whether the board was up or not the
last time it was checked, which was on the "status date". I assume
the remaining fields are self-explanitory.

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.
```

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, public domain software/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine, published by Robert Boardman and Howard E. Carson; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

To use an Atari 8-bit with the Internet, you need a shell account. As
far as I know, no one has written software for an 8-bit to work with a
SLIP/PPP connection (yet). An 80-column terminal program like
FlickerTerm or Ice-T also helps.

If you are using a standard IBM-compatible cable, Atari's 9-pin serial ports
have a different pinout. You can get a cable from B&C or Toad Computers,
or someone could post the information to make a cable.

Presently, the only thing you can really do is
connect to some terminal server or Unix shell via
a modem. I (and others before me) have been playing
around with ways of directly hooking an Atari into
the internet (ie TCP/IP), but the machine's limited
memory capacity make this very difficult if not impossible.

>Are there any modems with a decent baud rate which can be used with an
>850 ?

You can connect most any 'standard' modem to an 850, and baud
rate is hardly an issue considering you won't be
Web surfing or making large file transfers.

>I found this group by accident and hadn't really thought of using an

If only it were that simple - there's a Nintendo newsgroup, but they
don't have much net capability either... =)

There is much more needed that to simply save the registers! He
doesn't explain what he is doing, the only way I can see that he is
doing it is using his mmu to swap the bottom 4kb during each context
switch. This would give each process it's own stack and zeropage
space. You can then pass parameters on the stack or in the zeropage -
it's up to you. I would lean toward the stack though because you
could not have rentrant routines or share code between processes.

>should read his description, it's quite ineresting.

Yes, but Joshua is right. Each process will need some amount of stackspace
(how much alterable on a task-by-task basis) to be able to call
subroutines. When one task is interrupted the next task despatched will
need it's own stack back, which means that 1) stack space for each
process is limited by the number of tasks running or 2) stack will need
to be saved along with the task's registers on a task switch.
2 is obviously very slow, while 1 may limit stack space severely
(perhaps to 16 bytes each for a dozen tasks+OS).

Things could be worse than a 256-byte stack, though. The 8008 only had
16 bytes (internal to the CPU). Most others will allow up to 64k
for stack.

Atari 8-bit Magazines for Sale

Shipping is extra!

Antic - $1 each. Complete set for $75. (have disks for many)
April '82 (vol 1, no 1) through Jun/Jul '90 (vol 9, no 2) (every issue)

Atari Classics - $3 each.
Dec '92 (vol 1, no 1) to present

Atari Connection - $0.50 each
Summer '82 (vol 2, no 2) through Summer '84 (nine consecutive issues)

Atari Explorer - $0.50 each
Feb '85 through Feb '92 (27 issues, real difficult to tell if any are missing)

Atari Interface Magazine - $0.50 each
Jan '90 (vol 2, no 1) through Mar '90 (vol 2, no 3)
Jun/Jul '90 (vol 2, no 6) through Apr '91 (vol 3, no 4)
Jun '91 (stopped having meaningful volume/issue numbers)
Aug '91 through Jul '92
Mar/Apr 94

AtariUser - $0.10 each
Jun '91 through Nov '91
Jan '92 through Mar '92

Compute! - $0.25 each
Dec '81 (Issue 31) through Dec '87 (Issue 91)

Current Notes - $0.75 each Make offer for complete set.
Nov '83 (vol 3, no 11) through Sep '84 (vol 4, no 7)
Nov '84 (vol 4, no 9)
Feb '85 (vol 5, no 1) through May/Jun '95 (vol 15, no 3)

New Atari User - $0.75 each
Dec/Jan '89 (Issue 41) through Oct/Nov '92 (Issue 58)
Feb/Mar '93 (Issue 60) through Aug/Sep '93 (Issue 63)

Tyne and Wear Atari User Group Newsletter - $0.50 each (includes disk)
May/Jun '93 (Issue 3) through Jul/Aug '93 (Issue 4)
Nov/Dec '93 (Issue 6) through May/Jun '95 (Issue 15)
Nov/Dec '95 (Issue 17)

SOFTLINE - $0.25 each
Jul '82 (vol 1, no 6) through Jan/Feb '84 (vol 3, no 2)
(turned into St. Game, then died)

SoftSide - $0.25 each
Nov '81 (vol 5, no 2) through Jan '82 (vol 5, no 4)
Issue 32 through 42
Issue 48 (Mar 84)

STart - $0.50 each (contained 8-bit section)
Oct '90 (vol 5, no 2)
Dec '90 (vol 5, no 4)
Jan '91 (vol 5, no 5)
Apr/May '91(vol 5, no 7)

St. Game - $0.25
Mar/Apr 84

No, the two systems are not compatible. Even though the cartridges are of
similar size, the innards of the two machines are completely different.
You'd have about as much luck trying to play a 7800 Colecovision cart on an
Odyssey2, for example.

Ralph Mason (ralph.mason@liffe.com) wrote:
: There is much more needed that to simply save the registers! He
: doesn't explain what he is doing, the only way I can see that he is
: doing it is using his mmu to swap the bottom 4kb during each context
: switch. This would give each process it's own stack and zeropage
: space. You can then pass parameters on the stack or in the zeropage -
: it's up to you. I would lean toward the stack though because you
: could not have rentrant routines or share code between processes.

Well, I should have gone further into this.
The thing is that I have two versions of the OS, one for a computer with MMU,
and another one for a 6502 without.

With an MMU, each task gets its real own memory space, i.e.
zeropage and stack are remapped with the bottom 4kByte at each context
switch. This way every task sees its own stack and has its own
view of the memory - it doesn't see anything of other tasks, or the
system. The kernel entry/exit gates provide a way to change from
system memory mapping (which is just the botton 4kByte RAM with the
system stuff and the top 4kByte ROM with the kernel) and the
task environment. This is a complete mapping of the bottom 60kByte
(well, with I/O, the bottom 58kByte) of CPU address space. The task
environment can be mapped to RAM, ROM, special addresses that have
different features (like video RAM) and the like.
Normal tasks will have 4 or 8 kByte RAM, the system ROM for the
stdlib at $e***, the kernel at $f*** and the rest filled with nothing...
(mirroring the kernel)

Without an MMU, there is the problem with the non-relocatable stack the
6502 has. So, to avoid swapping stack contents around, I divided the
stack into 7 parts, i.e. 6 possible tasks with 32 Byte stack each and
the system with 64 byte. Because there is no boundary testing, this
is a 'dirty trick' (tm) to get it running even without MMU.
But even then only programs that cooperate, i.e. use different memory
locations can run at the same time - otherwise bad things happen, when
one tasks writes over important data for another one.

Most kernel routines are called with the parameters in the CPU registers.
And most kernel routines do not need morei (see the kernel interface
description). But a few of them need,
and for them there is a special area - not the zeropage but $02** -
reserved to which the parameter are written.

To share code between processes, you need not put the parameter on the
stack. The shell, e.g. is in the ROM. The same program can run several
times in different tasks without any problem. This works because
the used RAM is mapped to different pages for different tasks.
You can also load an executable into some RAM and let two tasks share this
RAM. As long as they don't write to it, there's no problem. For writing
they use the task specific RAM.

reentrant routines - well, the kernel is in some respect reentrant.
internal kernel routines call other kernel routines via the same
interface as other 'user' routines as well. The kernel entry/exit gates
detect this and do not change the memory mapping.
Devices, that have their own memory mapping and that are called via
the DEVCMD interface call kernel routines.
But then only some routines are a kind of reentrant, esp. the STREAM routines.
They disable Multitasking during their critical sections. The problem
with the C64 is, that is doesn't have atomic test&set operations. So all
task switches have to be disabled to test a semaphore, or when you enter
a critical region.
The memory routines, for example, cannot be called from an
interrupt. They are not protected against reentrance and therefore
a call from an interrupt can corrupt the stuff. Though the video device
for example calls ENMEM to enable the RAM on the video board at startup.
But this startup is not called from an interrupt.

The kernel as well as the video device are interruptable. But then, if a task
is calling a kernel function during the interrupt, the task is not
set waiting but is kept running after the interrupt. This is needed
to avoid an interrupted system call - and then another task calling
the same routine - to corrupt internal data.
The video device interrupt routine is interruptible, but it has its own
reentrance check to avoid confusion

hope it helps and so long
Andre

You have sorta missed what I was meaning here. Sure you can map code
around here and there - but if many processes are going to use the
same routines the routienes better not use any global data. These
routine should use the stack for any working data. I guess you use no
absolute jumps :-)

what about a eor ?

you pass in the critial section as the adress and eor that adress with
say 1

if

```
wait:
cmp addr,0
beq get
call scheduler yeild function
jmp wait
get:
eor addr,1
jz wait
```

..you should have the critical section here

>a critical region.

Sure the 6502 has an atomic test-and-set style operation; my preferred
implementation [for example, to ensure that MyRoutine can only be called
once] is...

```
MyFlag:
.db $FF

MyRoutine:
inc MyFlag
bne MyRtnEnd
.. do my routine
MyRtnEnd:
dec MyFlag
rts
```

If MyFlag is $FF when I start MyRoutine, then either the inc will happen
before another instance of MyRoutine is started [in which case, I'll be
able to enter] or else it won't [in which case, the second instance will
get in]. Other variations include shift or rotate instructions but I
don't remember the flag semantics for those; if ROR set the overflow flag
with the old value of bit 7, that would be nice but I don't think it does.

There was this great little game called SNOWFIGHT quite some time back. It was incredible fun for two people, especially for those who typically didn't like computer games (my computer-phobic girlfriend loved it!)

I could never get it to run for more than about 5 minutes before it would lock-up my 800XL, though. Did anyone else have similar experiences with it, or better yet, did anyone get it to run without a problem?

Curious,
Oscar

After a rethink (and a quick brushup on 6502 asm :))......

I think you can implement critical sections using the set & test that
the 6502 provides. I think sal (or sar) are the best for this
purpose because no matter how many threads try concurrently to get the
cs only one will succeed.

The Idea is that in the non-entered state the cs memory contains the
lsb set. One (and only one) process can then roll the bit off to
the carry flag.

to release it all you need to do is set that bit again. I written a
couple of routines that do just that. They also allow the same
process to get the same cs again (otherwise you can deadlock).

```
get_cs:

jsr get_current_process ;make sure it's the righe process
cmp cs_page+2,x
beq inc_exit

sal cs_page,x ; try to get it
bcc loop:

inc_exit:
inc cs_page+1,x ; keep a count
jsr get_current_process ; asumes that process is returned in A
sta cs_page+2,x

ret

release_cs:
jsr get_current_process ;make sure it's the righe process
cmp cs_page+2,x
bnz exit

dec cs_page+1,x ; dec the count of who is using it
bnz exit

lda #0
sta cs_page+2,x ; cleanup owner
inc cs_page,x; ; clear cs

exit:
ret
```

To use these functions you set X with the cs number you want and call
the function.

Of course you'll need some setup code to set all the sections to 1,
and process Id's & counts to zero during the OS startup.

```
setup_cs

lda #1
ldx #0
loop:
sta cs_page,x
inx
bnz loop:

loop_2:
lda #0
sta cs_page+1,x
sta cs_page+2,x
inx
bnz loop_2:
```

If you find any instructions that are not exactly the right 6502
please excuse me.. it's been a while.

have fun
Ralph Mason

I am shure, that the 6502 processor was not designed for multitasking purposes. As far as I see, each task needs it's own little world: A stack of course; and space for code and data. Because there is only one stack available, each stack related operation (JSR, TXS, ...) would only be allowed for the dispatcher. It seems to be indeed a possible solution to transfer the stack content for each task to reserved memory spaces. But copying the stack for each task slows the system down. To get around this, I consider the use of a p-machine like the UCSD system for the apple 2. The p code is machine independent and relocable. It's not quite fast, but it works.

I've done a BIT of testing with atari800 under Linux. It seems to be very
similar to Xformer 2.5 under DOS (no sound, no collision detection), but it
works pretty well and is reasonably quick (faster, but less stable, in the
svgalib version than the X11 version).

One ADVANTAGE that it has over XF25 (for ME anyway), is that it will read
a double-density diskfile created by SIO2PC. Maybe I'm doing something wrong
(or stupid), but I can't get XF25 to read anything other than a single-density
disk file.

BTW, What's AR?

Xformer has been having serious problems with emulating certain disk operations from the very beginning, I suppose. As long as most boot disks don't work Xformer is pretty worthless (well, at least in my case!). Currently my only hope is that other, newer emulators such as Rainbow or ATARI800 won't have similar difficulties, better sound emulation and a MUCH better customer support. ATARI800 sounds quite promising.

Don't tell me that it cannot be done. IT CAN BE DONE! Compared to various C64 emulators, Xformer is still at the very beginning as far as sound is concerned :(. Sad, but true!

Of course, the SP is only an 8-bit register so it HAS to be at a fixed RAM address.
I would consider copying the stack (only the bytes that are actually used) during
a task switch becase no matter what you do you're going to end up copying context-
related data at some point.

Consider the case in which zero-page is used to pass parameters. When you switch tasks
you will HAVE to preserve the context-sensistive parameters by copying them to
some area of RAM. This is not unlike copying the stack and, using this approach,
you can't take advantage of the capabilities that the stack provides (i.e. recusion,
parameter passing, etc.).

Please feel free to experiment, though -- I was just trying to save a few headaches.

>>using indirect indexed or indexed indirect addressing (which if they have all
>>of zero page to play with should be quite adequate).

An Apple //e with a 1MB Aux slot ram card has 17 page zeros to play with.
One for the OS and up to 16 other processes would make a nice small multitasking
environment.

Still looking for s/w for an 8 bit archive site. It looks at this point that rather than releasing the cd's, it might just be a dedicated bbs run on a pc. Also still need info on hd's to atari's. Or some method to connect a cheap pc w/cd rom to an 8 bit.

With the number of web pages up that are distributing Apple 2 software, commodore 64 software, I think the copyright holders are just saying ah what the hell. I realize it's still not legal, BUT IT WAS NEVER LEGAL!! Did you people complain then? In 1984?

DID YOU KNOW THAT FRANK TETRO jr. wrote an editorial for "Electronic Games" Magazine about "The harm of software piracy" all while running a mega pirate BBS in his dorm room?????

I hate hypocrites!!

Ralph Mason (ralph.mason@liffe.com) wrote:
: You have sorta missed what I was meaning here. Sure you can map code
: around here and there - but if many processes are going to use the
: same routines the routienes better not use any global data. These
: routine should use the stack for any working data. I guess you use no
: absolute jumps :-)

I do use absolute jumps. With an MMU, each task has its own kind of
virtual machine. you can jump anywhere you want.
Without MMU, only tasks that use different memory locations -
in the zeropage, other RAM and program address space - can coexist.

: what about a eor ?

: you pass in the critial section as the adress and eor that adress with
: say 1

: if

: wait:
: cmp addr,0
: beq get
: call scheduler yeild function
: jmp wait
: get:
: eor addr,1
: jz wait

: ..you should have the critical section here

This version doesn't work. If the task gets interrupted between the
cmp and the eor, another task can eor the address and enter the critical
region. After the first task gets back, it eor's the address again,
making it zero again and then having free entry to the critical region.
Boom.

But then, as many have pointed out, the 6502 has some test&set like
operations, i.e. the 'shift' and the 'inc/dec' operations. One
can surely build semaphores with them too.

But in my OS, all possible blocks are done with the scheduler that
puts the task to sleep instead of letting it spinlock, wasting CPU time.
And interrupt routines should never block - so they can only call
save - i.e. with SEI protected - routines.

Andre

APE will let your PC act as a server for your Atari. You can
make any drive/directory on your PC available to the Atari.
Hooking-up a CDROM to the Atari would be trivial as far
as hardware goes (we already have the equipment for it),
but software would have to be written to understand the
data on the disk.

-ATR 8000 Interface from SWP
64K, Z80 CPU, SIO support.
- Parallel printer interface
use ATR800 Ram as a pronter spool Buffer.
use any IBM printer with your Atari.
- Floppy drive support
support 3.5, 5.25 and 8" drives up to 4 DS/DD 80 track
drives.
use drives as Atari, CP/M or MSDOS format.
- RS232 Interface.
excellent replacement for 850 interface.
- Co-POWER 88 interace installed
128k, 8088 16bit CPU.
Runs IBM Xt and CP/M 86 software on the Atari.
Expandable up to 1 Meg with additional memory board (XR88)
use Co-Power memory as a ramdisk under CP/M.
- Hard Drive host adapter installed
use Hard Drive with CP/M, MYDOS, and MS-DOS.

The system includes:
1. ATR-8000 in metal case with Co-Power 88 and HD adapter
installed.
2. Floppy drive cables.
3. (2) ATR-8000 Owner's manual, MS-DOS 2.11 Manual, CP/M
supplement
4. ATR-8000 Schematics
5. Co-Power 88 and Hard Drive Instellation and Supplement
6. (46) disks of software (source code, Dbase 3, Perfect
writer...)
7. Spare ATR-8000 motherboard.

I bought this packedge 6 months ago for $200.
i will sell it for $150
and will add:
1. Extra ATR-8000 in metal case aith HD adapter installed.
2. (3)_ 5.25 360k disk drives.
3. 8" disk drive with bunch of 8" disks
4. Extra manuals

all for the same price.

i also have for sale,

Antic magazines,

Hi there!

Is anybody out there by chance working on a gcc port to the 6502?
I have found an _lcc_ port, but that seems to produce rather poor assembly
for certain C code sequences.
I would maybe try to port gcc myself, but only if there are volunteers
to assist me ;-)

BTW: In my opinion it _should_ be possible to do such a port, because
there is a similar project already (namely Coactive's 68hc11-gcc).
Clear enough, one would have to define some pseudo-register scheme
and assembly macros to handle this, but this can certainly be done.

Greetings,
-Gerhard

Wayne, this is what I'm trying to accomplish. But I have to collect
the images first!! I will let everyone know how APE works out, it is a
program so you can use your PC as a server to the 8-bit, all you would
need is an 8 bit (which are about $50 or less now) you wouldnt even
need a disk drive. If you hear of anyone with sites, let me know...

1531. Questions about ED disk format

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-21 00:00:00 UTC
From: gold@aros.net
Message-ID: <4ir0j5$837@news.aros.net>
Source record: 85110

I've looked through chapter 2 of Bob DuHamel's 'Atari System Reference Manual,' which can be found on the British Underground Atari 8bit homepage. It gives a good description of the standard DOS disk formats.

My question regards DOS 2.5 and enhanced-density disks. The description of sector 360 says that the Volume Bit Map starts at byte 10. With 128 bytes per sector, this makes the VBM 119 bytes in size. Since each byte gives the status of 8 sectors, the VBM can refer to 119 * 8 = 952 sectors.

The ED disks are supposed to have 1024 sectors, of which 1012 should be free. The VBM as such is not big enough to handle this many sectors.

I assume the description given in the reference manual is either erroneous, or more likely applies only to single-density disks. Could someone clear this up for me? Thanks very much.

1532. Re: Q: Best Hard Drive Setup?

From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <4iqg6b$c5h@news.tcd.net>
Source record: 85111

Best hard drive setup would be Scsi, possibly a little more
expensive but definately better performance.

As to the modem Intel 14400 EX, my server recommends
InitString=AT&F&C1&D3/JO/N3/Q2/V2%C1"H3S7=60

Hope this helps??

Also are you loading PRC.SYS instead of RS232.COM?

Have a couple other init strings for other Intel modems..

: concerned :(. Sad, but true!

: Ulf

Yes the problem with disk operations is the way usual emulators
handle them.
The Atari 8bit OS has a jump adress for the SIO routine and it is equal
for all OS (400/800/800XL/800XE/130XE/...) so many emulators patch the
OS with an special instruction at these location and do something equal
but do not emulate the SIO in the OS.

This should work for all programs which do not use a own SIO or install
the own SIO at the jump adress of the original SIO (on the XL/XE series
in the RAM under the ROM).

Quite a few programs (some Bootloaders, memory hungry programs, ...) use
a own (usually optimized for high speed drives) SIO which is located
somewhere else in the memory.

So the perfect solution would be to fully emulate the custom chips used in
the SIO in the original OS.

A not so perfect solution but not the worst would be to set the above
mentioned special instruction somewhere else in memory (depending of the
program) and use the emulator SIO like in standard case.

Adolf

>so your kinda left with a bit of a problem when it commes to
>multitasking, ie you cant give each process it's own stack without
>copying the whole stack (maybe just to the current sp value?)during
>each context switch.

Here's one way around the problem: it depends on assuming
that the standard stack entry is a 16 bit word, and that the size
of each individual stack times the number of stacks is less than 256
entries. Then the high byte and the low byte of each stack entry can
be maintained in dedicated stack pages (anywhere in the memory space,
but not relocatable for this specific approach), and accessed via
absolute X-indexed address, as in:

```
lda STLO,x
sta W
lda STHI,x
sta W+1
...
```

Advantages: A single register is used for stack reference, so context
switch overhead is reduced; reference uses a 4-clock rather than a 5 or 6
clock address mode, so it's a little bit faster, and reference works in
such a way that Y is free to be used as an auxilliary register to index
from the top of stack: and the split stack pages implies that only two
increments are required to index by 2 16-bit words. Assuming the stack
grows down, to reach the third entry, simply

```
txa
tay
iny
iny
lda STLO,y
```

```
sta ADR1
lda STHI,y
sta ADR1+1
...
```
Disadvantages: while the 256 byte hardware stack has been expanded, a hard limit remains.

The other approach is to dedicate a pair of bytes in the 0-page to a vector, in which case, if you rely on y-indexed addressing, you have slightly slower access, but to index up into the stack frame you can simply load the value; and the location can be anywhere the memory management routines can find for it.

Virtually,

Bruce R. McFarling, Newcastle, NSW

DOS 2.5 uses a second bit map at sector 1024. Mydos uses sector 359 (one
reason why Mydos can read but not write DOS 2.5 disks).

I bought a 5200 with a power supply, and they told me that they did not go together, the power supply was an extra $5! Who would buy one without the other???
Then there's times when they'll ONLY sell things as a set, like a CED player and a bunch of discs, so I have to buy the whole thing just to get some discs I want, and get stuck with extra copies of ones I've already got!

AlenSmithe@aol.com

There's nothing we wanna watch on TV tonight, but we're still gonna watch something great- with our RCA VideoDisc player and VideoDiscs! Just flip a switch, and on OUR TV we see Airplane or The Pink Panther, The Godfather or Grease, Muppets, monsters, Mickey, MASH and 100 more, starting as low as $15! And the player costs less than 500! Put it this way; we're watching a GREAT MOVIE! And you're watching- us.
BRING THE MAGIC HOME ON RCA!

PLEASE don't go over about 75 columns!!! i have to edit the
paragraphs by hand if they don't fit. it's what has to be done in
vi...

thus spake Michael Ellis in comp.os.misc...

. 2) Passing parameters via zero page has problems with the fact that
. your code will NOT be reentrant. If you propose to do ANY multitasking
. whatsoever, you must write reentrant code. If you don't, the following
. will happen:

i dispute this. it is possible to multitask with non-re-entrant bits
- that's what shared-memory synchronisation is all about. but you
have to make sure that no more than one thread is using any one bit of
memory at a time. which is easy enough if you have fixed desched
points - look at forth's classical tasking model.

. 1. parameters are installed and program jumps to routine

. 2. timer interrupt comes in and invokes the dispatcher which then
. decides to give time to another task

solution: dispatcher says "ok, i'll do that when this task's got out
of the kernel code". yes, it's messy, but it would work for that
purpose. (think of it as a semaphore on the parameter area.)

[]
. The way to get around this is to pass all parameters on the stack,
. and use separate stacks for the separate tasks.

and this option is even less usable on the 6502 because you only get
256 bytes of stack space, unless you use a couple of zp locations to
define your own.

I suspect you're confusing a port with a cross-compiler. The 6502 can only address 64K of RAM and the Ataris don't have an MMU, while the GCC compiler is over a MEGAbyte in size.

You might be able to do 6502 cross-compiling on a PC (or whatever else gcc DOES run on), but I SINCERELY doubt you'll ever see even a stripped down gcc on a 6502.

But one can always dream...

I connect with the internet every morning with my 256k Atari 800XL,
14.4k baud USR modem, connected to a Black Box. I use my un*x bash
shell to ftp to all kinds of interesting places. I use ftp to
download to my server, then use the sb command to download into my XL.
I can also use telnet to log in as a guest onto the various bbs' on
the internet. And irc, and muds. My server also offers me news,
which I read with the trn program. I can do my mail online, using the
mail or elm program. About the ONLY thing you cannot do is to surf
the net with a web browser. But then, you could always get web pages
sent to you via email, from one of the automated servers.

I'm not sure about your maximum baud rate with your 850. Probably
around 9600. But still very much worth using. I would suggest that
you try it. You just might like it as much as I do.

One word of caution. Ask your prospective ISP if they can provide you
with a "shell account". More and more providers are exclusively
tcp/ip, which our 8bits cannot currently handle.

Don't know about Atari800, but have heard many say that AR locks up under
the current version of XFormer. On the other hand, AR works 95% fine under
Rainbow. I say 95% because I have found one glitch - it crashes if you
enter a Smithy. Everything else is fine, but Smithy's are a no-go. But
since all the best weapons are found during encounters, it's not such a
huge problem.

1544. Ice-T 2.7 released!

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-21 00:00:00 UTC
From: BRUCKA@eruvin.jct.ac.il
Message-ID: <960322013413.ab9@eruvin.jct.ac.il>
Source record: 85123

Before I take a break from programming so I can concentrate my efforts on studying, here is the list of additions for the latest (and last, for a few months) version of Ice-T XE.

Added ZMODEM downloading! Including crash recovery.
CRC-16 table-driven error checking.. No more speed limits for X/Y/Zmodem.
Added boldface and blinking characters support to the terminal emulation.
R: handler loaded automatically - no more prepending.
Menu controls enhanced - flip from menu to menu with left/right arrows.
MAny other bug fixes and user suggestions!

This SHAREWARE product is currently available by requesting it directly from me via email. The address is: brucka@eruvin.jct.ac.il (or just reply to this message). Any volunteers to put it on the FTP site? I have no access to those things.

Tha mailed package will be a uuencoded, arced, diskcommed image of an enhanced-density (1050) disk.

The software is not free, and a registration fee of $25 is required if you wish to regularly use it.

Thanks for listening,

-itay chamiel

P.S. - Bob Wooley, if you're reading this, I'll send you a "press release" for AC seperately! Don't use this message.

Source record: 85126

Hi there!

Few weeks ago, a guy gave me his Atari 800XL, because he didn't use it for years and he knew, that I like old Computers (btw: does anyone else have an Amstrad CPC?).
Unfortunately a friend of mine, who transported the computer to me, had an accident on the way to me and the computer wasn't belted. (Er..the friend is fine, btw... :))
So I feared the worst, when I connected my new old Atari to my TV an switched it on.
First, the screen stays black, but after the third or fourths time, the I see a white cursor on a blue background. But there's no "Ready" and nothing happens, when I press any key (except the reset-key, hehe.. ;)).
Consulting the manual (I did read it before i switched the thing on.. :)), I learned that you can enter the Setup-menu by pressing "option" during booting, but it didn't work, also...
When I press the "Start"-key during booting, the computer beeps.

I don't know what to do, so perhaps you can help me.
I hope the good old computer didn't take any damage through the accident.

btw: the Atari was kept on the loft, AFAIK, perhaps that's the reason?

greetings from Germany

If you change a player's horizontal position register in the middle of a scanline, a player can appear more than once per line. Think of it like a comparison--when the beam position matches the hardware register, the player gets drawn. So you can feed the register the smallest coordinates first and as long as you can update the register before the beam reaches the next comparison point, it will get drawn again. Of course, you will have to do this on every scan line that the player is used, and this chews up lots of time.

Doesn't gcc take quite a bit more than 64K? It might be possible to
write a cross-compiler that produces 6502 code on some other system.

"Thrifts... Just What're They Thinking About ?"

Here in Madison, Goodwill operates four stores around town. On Tuesday I found a bare XEGs Console ($2.99)... no PS, keyboard, games.

Today, at a different store I find the keyboard ($4.99)!. Smelling a light gun, I looked around but didn't find it... at first. I'm into cameras also, and having checked out the electronics area I moved along to the showcase for their cameras and guess what's sitting on top of the showcase? Light Gun! ($2.99)

So here's the question... What gives with these guys? This outfit was undoubtably donated as one piece. Who's idea is it to split up equipment
like this anyway?

Well, tommorrow I'm headed to store #4 - What're the odds I may find some carts or a power supply?

Scott

Oh Yeah, I hit Milwaukee esterday for the first time, not much luck unless I was willing to part with $25-$35 for a 2600 and Colecovision console.. carts additional!

(Mini-Brag) I *did* score a heavy-case 2600 boxed! ($6)

: free. The VBM as such is not big enough to handle this many sectors.
:
: I assume the description given in the reference manual is either
: erroneous, or more likely applies only to single-density disks. Could
: someone clear this up for me? Thanks very much.

The description in the reference manual applies to single-denisty
disks. On the 'Enhanced-Density' disks they use an 'extended table of
contents' as well as an 'extended vbm'. I think some of the location
used are sectors 1021-1024. This is all from memory, so the exact location
might be elsewhere.

This is just an announcement to let everyone know that the exact location
of The Classic Atari Commercials has changed. I have noticed continued
attempts to access them directly. They have been moved to a newer machine,
which should be more responsive and should not have any problems with
overloaded requests. Please, access them via my main 8bit page --
http://nimitz.mcs.kent.edu/~clisowsk/8bit.html, and if you must,
http://www.wtf.com/~lisowski.

Another one I think you forgot to mention is just how hard it would be
to make and return from function calls.

You also seem to lose a register & considering you only have three I
don't think it's that workable for use in a multitasking OS.

The MMU and switching out the zero page and stack would seem to be the
cleanest and best solution. It also makes the context switch VERY
easy. In the interrupt handler all you do is the normal style of 6502
interrupt code pushing all registers on the stack. swap the pages in
the mmu, pop all the registers back (standard 6502 int exit) and do
a iret - job done.

>parameters by copying them to some area of RAM. This is not unlike
>copying the stack and, using this approach, you can't take advantage of the capabilities
that the stack provides (i.e. recusion,
>parameter passing, etc.).

Here's my reasoning for the two approaches I suggested, that is,
software stacks relying on absolute X-indexed addressing or post-indexed
indirect addressing.

It's a given that in a time-sliced or other non-cooperative task
switch, the register will be saved. So it makes sense that when the
parameters for a procedure can be held in the registers, simply pass them
in that manner. However, that may not suffice for all procedures.
Use of stacks was suggested as a way to get around this, and
stacks indeed have all the advantages listed above. There may be problems
using the hardware stack: the limitation in size (256 byte hard limit) is
behind many of them. However, there are other ways to implement stacks
on the 6502: direct indexing with the index registers permit software
stacks to be implemented that total 256 x the word width in bytes, so for
2 byte stack entries, 512 bytes of software stack space is possible; for
4 byte stack entries, 1024 bytes of software stack space is possible. No
matter how wide the cells in the stack, by storing each byte of the cell
in its own binary page, 256 cells can be stacked.
Advantage: a discussed, the index registers will be saved and
restored in any task switch, so after setting a task up with the
appropriate X-value for its segment of the software stack, there is no
additional task-switching overhead. Compared to PHA PLA, there is a loss
of one clock in accessing the stack, but in return it is easier to index

into the stack, to access independent parts of a stack frame.
Limitations: Fixed 256 cell limit. And, because of the peculaiarities of X-indexed addressing, to ensure that X and Y are equally useful as indexes, the stacks must be located within page boundaries.

To avoid the fixed limit (other than RAM limits), the only general indirect addressing modes are (AA,x) and (AA),y, and for handy access into the stack, (AA),y is superior (though (AA,x) would give the faster task switch).
Advantage: 16-bit stack pointer with up to 256 bytes per stack frame.
Disadavantage: in addition to the registers, the location providing the stack address would have to be saved and restored in a task switch. The accessing is 3 to 5 clocks slower than PHA PLA, depending on whether a page address boundary is crossed. And the ability to independently point at two stack entries is lost.

Virtually,

Well, even if 8-bit code took only one tenth the size of 32-bit code,
which way too optimistic :-), it would still be too large by a large
amount (current cc1.exe size / 10 is about 100 Kb!). So: probably no
way for gcc on a C=64, not in this universe.

I agree about the 6502 group.
However I want to clarify what you said about the 65816. I have read
the WWW page about the 20Mhz accelerator for C-64, and it's very
impressive. I just want to clarify the fact that although that accelerator
is new, the 65816 chip has been around for quite a while. It is the
CPU in the Apple IIgs.

Ask your ISP to install Lynx! It's a textual web browser, and since
it doesn't download the graphics, it's often a lot faster than the
graphical browsers anyway.

Then bug all the web page authors to put ALT tags in for their
graphics, and not to use imagemaps....

The next SwapMeet is Monday, April 1st, 1996.

WANTED: Dealers to sell at Upcoming Swap Meets. Dealerships sought fall into such Categories as Computer Dealers, all kinds. All kinds of Computer HardWare, SoftWare, Peripherals & Accessories for ALL Computer Makes and Types.

Also Sought are Dealers in Video Gaming Equipment, such as Video Game Consoles, Cartidges, Video Game CD Players and Video Game CDs. ALL Video Game Makes and Types. ALL Video Game Consoles, Cartridges, CDs, Peripherals & Accessories.

On the April 1st SwapMeet, we will be Raffling off a Panasonic Printer! Anyone showing up can win. Just be their for the Drawing. The first Ticket is ***FREE***! Additional Tickets are 2 for a Dollar. This is One of Many good reasons to come to Our SwapMeets. Don't miss this SwapMeet and be an April Fool!

Recruiting New Dealers with Membership for Dealer Value. You could setup at a full year of swapmeets, 12 Monthly swapmeets at $10 a Meet, for $120 a year, or join our group and setup ***FREE*** for a year for ONLY $50! Greater than a 50% Savings!

Also Wanted are Dealers in ALL Types of Electronics.

WANTED are Dealers in Ham Radio, CB Radio, Music CDs and other Recorded Music. Stereo Equipment also Wanted.

Also Wanted are VCR's, Video Tapes, TVs and Satelite Gear.

This is an ALL Computers, Game Machine and Electronics Swap Meet!!

Small Businesses, and Dealers Welcome and Wanted!!

NO ADMISSION CHARGE!!! PLENTY OF FREE PARKING!!! NO ADMISSION CHARGE!!!

TABLES $10! TABLES, FIRST COME, FIRST SERVE!

Swap Meet Location in Portland, Oregon. USA. At 1819 N.W. Everett St. at the NorthWest Service Center On the First Monday of each Month.

The next SwapMeet is Monday, April 1st, 1996.

ACE of America, an All Computers and Electronics User Group, with a special emphasis on Atari. At ACE Swap Meets you might find Atari, Apple, Macintosh, Commodore, Amiga, IBM & Clones, Nintendo, SNES, Sega Genesis, Jaguar, Game Boy, Game Gear and Lynx. You could also find the following items to go with your system, such as Printers, MoDeMs, Monitors, Hard Drives, Disk Drives, Power Supplies, MIDI Devices, Mice, Joysticks, CD Roms, Cables, supplies and Accessories.

ALL COMPUTERS, GAME MACHINES AND ELECTRONICS ARE WELCOME!!

ACE Is currently holding Monthly Swap Meets on the First Monday of each Month from 7 PM, except on certain Holidays that we must reschedule due to our facility being closed. Swap Meets are Held at 1819 NW Everett at the NW Service Center 3 Blocks North of the corner of 18th and W Burnside in Portland, Oregon. USA! Table space is $10. Tables provided as long as they last. Show up early to get a good table, like 6:30 PM.

FREE ADMISSIONFREE ADMISSION**FREE ADMISSION**FREE ADMISSION**

On the April 1st SwapMeet, we will be Raffling off a Panasonic Printer! Anyone showing up can win. Just be their for the Drawing. The first Ticket is ***FREE***! Additional Tickets are 2 for a Dollar. This is One of Many good reasons to come to Our SwapMeets. Don't miss this SwapMeet and be an April Fool!

PLENTY OF FREE PARKINGEVERYONE WELCOME**PLENTY OF FREE PARKING**

FOR INFO CALL OUR SWAPMEET HOTLINE WITH 24 HOUR RECORDED INFO, CALL: (503)650-7196 OR FOR FURTHER INFO FROM BEN, INCLUDING TABLES: CALL FROM 3 PM - MIDNIGHT / MON-THU, FRI 3 PM - 6 PM: CALL BEN AT (503)256-9974!! IF BEN IS AWAY FROM THE PHONE, PLEASE LEAVE YOUR HOME NUMBER AND HE'LL TRY TO RETURN YOUR MESSAGE! THESE SWAP MEET SPONSORED BY ACE OF AMERICA!!

This Message is distributed throughout the Pacific NorthWest, everyone reading and their Brother is welcome to come and Attend!!

Please Direct all Replies to bensmith@teleport.com in E-Mail or call (503)650-7196 anytime.

The next SwapMeet is Monday, April 1st, 1996.

Scott Williams (scottw@pxl.com) wrote:
: "Thrifts... Just What're They Thinking About ?"

You used "think" in a sentence about thrift store policies? Haha!

[snip]
: So here's the question... What gives with these guys? This outfit was
: undoubtably donated as one piece. Who's idea is it to split up
: equipment
: like this anyway?

I'm willing to bet that it's something that happens *after* the thing is put out on display at least half the time. I can usually tell at the Savers I frequent here in Minneapolis by looking at the "tag" (ok, the piece of masking tape), which has some sort of a multi-letter code (the employee's initials, I'm guessing) and a number that appears to represent the number of pieces in the set. I remember on one occasion passing up a Fairchild Channel 'F' in the box with many of the pieces (they had it priced at, like, $50 or something). As I visited over the next week or so, the price declined steadily....along with the number of accessories that had been with it.

The other half of the time, well, who knows....the pricing policies of some of these places just escapes me, especially with classic games. I've seen carts priced seemingly based on *size*!

: Well, tommorrow I'm headed to store #4 - What're the odds I may find
: some carts or a power supply?

You never know. I blew off a Colecovision console recently because there was no power supply in sight, only to return a week later to find the console....with the power supply!

Have fun....
Scott

> with 32-bit many-register processors in mind, though...

An addition of two ints (32 bit) is two bytes opcode plus addressing
on an x86; on the 6502 this would take _at least_ (if both of the 32
bit numbers are in the zero page) 24 bytes (LDA adr1, ADD adr2, STA
adr1 is 3*2 bytes and repeat this 4 times - both vars out of the zero
page make 36 bytes, or you do indirect addressing and juggle the X
register). And 32 bit is the default integer size on gcc - it's
regarded as "one size too large" for the 8086 already.

And then there is the problem that gcc does not only take much memory
for its code but also for data - it's notorious as a memory tester for
PCs because of its huge working set. :-) Any 6502-based VM systems out
there?

I agree that it's annoying to run into folks who can't generate appropriately-formatted posts, but it's not at all hard for you to fix. Just do this in vi to reformat the current file:

!$fmt

Or you can bind a useless key to "reformat paragraph":

:map q !}fmt^M}

(Note that the ^M should be a CTRL-M; type it in vi by typing CTRL-V CTRL-M. You can put this in your ~/.exrc so that it's always available by just omitting the leading ":".)

1588. Xformer questions: XFD images

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-22 00:00:00 UTC
From: Jason Hasenbuhler <hasenbuh@rex.cs.tulane.edu>
Message-ID: <3153A70E.1037@rex.cs.tulane.edu>
Source record: 85163

I've had the demo copy of XFormer for the PC for quite awhile now
and have only gotten the .XFD file that came with it to work. I did
find an ftp site with lots of Atari software, but it's all arced and
when I extract it I only get .BAS .OBJ or .COM files. I know I can
load these in like "XF33DEMO FILE.COM FILE.DAT" but everything I
find needs four or five files on the same "disk" to run.

My question is this: is there a program that will pack all of the
individual files into an .XFD and where can I get it?

-or-

Where can I find .XFD files? Is there a regular ftp site for it?

Thanks,

Jay

>Curious,
>Oscar

I've played it and had simular experiences. It seemed to play ok for a while and then suddenly go haywire. I think it's just the program itself. I seem to recall thinking it might be an XL/XE thang but I've tried it on an 800 with the same results. It's too bad, I thought it was a great game. Very original.

Tim Henley

This opinion does not count. Better or not, what does it really means? I know of a lot of CPU's and microcontrollers, which are more powerful than the 6502. But I like to get good clues, how to use the 6502 in various ways. This is the challenge. If you want a debate on using the Z80, you can open a new thread on this.

Holger Bruns

1591. 8-bit Sound

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-23 00:00:00 UTC
From: areeve@avana.net
Message-ID: <4ivtj7$iqq@tiger.avana.net>
Source record: 85166

If anyone has information on Atari 8-bit sound please email or fax
[(770) 977-7165 in the USA] to me. I'm particularly looking for the De
Re Atari information on sound and will post if somebody faxes it to me
so everybody doesn't do so, but doubt there will be a line to do this.
I have Mapping the Atari's information on sound, but it seems to be
lacking in detail and they refer me to De Re Atari. I'm not sure how
the poly-counters work and I'm a bit puzzled as to what voices 2 and 4
are clocked at...always 1.79 MHz...based on the description of $D208.
- Thanks in advance, Alan

You are absolutely right. When anything that has more than 1 piece is put out for sale, pretty soon part of it will show up in some other part of the store. Or else it will just disappear, presumably into someone's pocket. When I put out any kind of system for sale, I always include all the necessary parts, but it's almost impossible to keep them together.

Joan

Yeah, but dammit, I want GCC! I'm in a Systems programming class this
semester and we're programming single-board computers with 68000 CPUs on them.
We're doing it in C and assembly, and using a 68K-generating version of GCC
to do the job. It's AWESOME. And >I< want to be able to do the same for
the Atari using a 6502-generating or 65816-generating version of GCC.

There HAS to be one!!!!!! <:^(

Either that or SOMEONE had better upgrade Action! a HELLUVA lot or I'm going
to go MAD!!!!!

AHAHHH!HH!HH!HHH!

Sorry folks silly question time. I now own a PC after having an Amiga,
so now I can run an emulator for the Atari & get files via a cable
onto my PC...
Does this work only Atari -> PC or can they be sent back to the
Atari??

I only ask as I will be getting a CD writer and the Non protected
software could be lumped onto 1 CD and save a massive ammount of
space......
Many thanks....
Paul `Mclane` Irvine

: And then there is the problem that gcc does not only take much memory
: for its code but also for data - it's notorious as a memory tester for
: PCs because of its huge working set. :-) Any 6502-based VM systems out
: there?

Actually, someone did make such a beast for assembly programmers. :) Cool!

Now, everyone's saying "64K too small!" "6502 too weak!"

Well, we DO have up to 4MB RAM and 128MB HD space on 6502 machines.
And we DO have up to 20MB RAM and 128MB HD space on 65816 machines!*

So, if anyone WERE sick enough to port GCC to the Atari, they'd need a Sweet16
and a BlackBox or MIO or something, first. :) Yah know what though?
I bet someone WILL do it. And they'll do it for SpartaDOS only. Then's when
I'll visit Dr. Kevorkian. <sigh!>

-bill!

* 20MB is derived from 16MB possible as linear memory on the Sweet16 plus
~4MB possible as banked memory on either 6502 or 65816.

Source record: 85177

Larry Mullaly (lmull@skypoint.com) wrote:
: I know this probably has been asked before but does anyone know
: how to convert XFD to ATR? Thanks.

Easy - take an existing ATR of the same size/density (ie, if it's an 88K XFD, you'll need an existing 88K ATR).

Open the existing ATR. Read 16 bytes. Save it into the new ATR.
Open the XFD. Read all of the bytes. Save them into the new ATR.

The new ATR should be the same size as the existing ATR - which is 16 bytes larger than the XFD which is has been converted from.

I actually have a little (more intelligent, but not perfect) C program which I use on this Unix box which can convert for me. I forget its limitations, but it seemed to convert the Alt.Real. disks (I haven't actually tested them yet).

Speaking of the AR disks - is that legal? (technically, I'm pirating by getting them, if they aren't, BUT I do have all of the original disks (and never play them cuz I hate floppies :) - I figured I'd get more action out of these gems if I can play them off the PC))

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers.
Upgrades and replaces the 6502C in the computer with the 16-bit 65C816
CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up
programs as much as 350% faster. The 65C816 processes 4 instructions
per clock cycle (Only the new P6, 80686 Intel chip does that, besides
this), as compared to the 6502 which processes one instruction per
clock cycle. Original cost $249.95. Includes T816 assembler $75.00,
Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks,
valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $100.00
or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb
(IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4
disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5
floppies, any IBM compatible printer, modem port for using any RS232C
compatible external modem, includes Auto-Term Disk for Atari computers,
CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS
master Disk, CP/M Supplement Manual, modem cable, printer cable,
original cost $695.00 for the ATR8000 Basic system, printer cable
$39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan,
connecting cable, for above ATR8000 or any IBM compatible computer.
Case can hold 4 half height 5.25 floppies, original cost $895.00, Case
alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers.
Upgrades and replaces the 6502C in the computer with the 16-bit 65C816
CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up

Andrew Krieg: Man or Android? (krieg@miller.cs.uwm.edu) wrote:
: Some of the software I would like to get for my 8-bit comes in ATR image
: format. I know this is some format used for emulation on a PC, but what
: exactly is it?

Header + raw disk data, pretty much.

: I have no desire to do PC emulation, I just want to get the files onto my
: 8-bit, without buying a dedicated cable or anything else. What is the best
: way to do this?

You either:
1. are TOTALLY against using a PC with an Atari
2. have a nice hard drive setup on your Atari
3. don't know what you're missing (ie, never seen APE running)

: Can I extract the files from the ATR image on a UNIX machine? I have a modem
: on my 8-bit, so I can download the files from my UNIX account. Or will I
: have to download to my PC, extract the files, then upload the files to my
: UNIX account? What tool is used for extraction, and I will I be able to get
: the raw Atari files from an ATR image?

Either. There's "ATR2UNIX" which is obviously for Unix, and I think ported
for MSDOS, which extracts files out of happy ATR files (ie, DOS 2.5, MyDOS)
onto your account/drive. Works pretty well.

There're also "S2PC" and "AtarImg" for MSDOS which give you an interactive
interface (AtarImg looks a lot like GUI FTP programs, and S2PC looks like
an AtariDOS menu). You can copy, delete, rename, and extract/add files to
ATR images for DOS 2.5, MyDOS and (AtarImg only, if at all) SpartaDOS.

Good luck!

Yes, I have this game. It's called "Snowball Fite". My copy says it's from "The Nose" at "The Cocaine BBS". (heh heh, get it?)

When me and my 'crew' put on an all-night event, I usually set up a play room full of old handheld games, video games and computers. A couple of these parties, "snow*ball" and its sequel, "snow*fall", were winter-themed. I had the game on right at the entranceway to the dance floor.

You're right about it being a hit with people who don't normally play with computer or video games. People loved it: it drew a crowd all night.

-Tony R.

p.s. Anybody have Mr. Llamasoft's e-mail address? I use a lot of his software to generate live graphics for the video projection screens, and I'm sure he'd get a kick out of seeing some pictures.

Paul Irvine (mclane@dellos.demon.co.uk) wrote:

: Does this work only Atari -> PC or can they be sent back to the
: Atari??

If you mean APE or SIO2PC setups, then yes - you can read files from your PC onto your Atari, and save files from your Atari onto your PC. Both either with disk images or directly onto the PC. (APE does it very transparently - I have a few 3.5" MSDOS disks with demo programs sitting on them in .COM format (ie, raw), and I can just 'install' my PC's 3.5" drive into one of the APE drive slots, do a disk directory of the 3.5" disk, load files off of it, etc! It's RAD! Same is, of course, possible with hard drives & CD ROMs!)

: I only ask as I will be getting a CD writer and the Non protected
: software could be lumped onto 1 CD and save a massive ammount of
: space......

Gonna need a TON of 8-bit stuff to fill a 600MB CD ;)

1614. Question Power Supply 800XL

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-23 00:00:00 UTC
From: ffernand@tir.com
Message-ID: <3154BCDF.5265@tir.com>
Source record: 85189

To anyone,

I was given a Atari 800XL. However it did not come with a power supply. Can anyone give the specs on the voltage needed for the 7 pin DIN. or does any one have working power supply they would like to sell me. Also I need the specs for 5 pin din for the monitor, also. I guess at this time does any one have any spare parts for the 800XL or even an user manual.

Please respond back to my email address.

Thanks in advance.

Fernando

Now if we had someone from WDC to give us more input and support.
I am moving back to Phoenix in a couple of weeks, and I need to go into
to talk to them anyway, so I will try and collect some info on the newer
65xxx series chips (like what status is the 65C832 in? [I know the answer
will be that there are no companies that want 100K+ units so they won't
finish it!]).

Can you imagine a system with a 65C832 as the main processor and one or
more DSP chips? Throw away that slooooooooooooow ibm and get with the
program!

Does any one knows on an newer version of Gifencode that allows you to
convert Atari pictures to Gif in COLOR!!!
Right now i have Gifencode 1.0 wich does convert Atari pictures to Gif's
but only in Mono,
or Information on another utility that does the same thing will be very
helpfull!!!

Thanx, Nir.

If you're going to use enough the 65C265 has mask programmed ROM built in,
but again, you probably need 10K+ units to pay for the mask charge. It
really is one of the best single chippers out there (4 complete serial
ports, 2 analog [sine wave] ports, lots of parrallel ports and/or
addressing, etc.).

1619. IT DIED!

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-24 00:00:00 UTC
From: Darryl Shpak <dos021@freenet.mb.ca>
Message-ID: <Pine.SOL.3.91.960324221721.23480A-100000@winnie.freenet.mb.ca>
Source record: 85059

<funeral dirge>

My Atari died :-(

Sypmtons: I turn it on, I get a low-pitched buzz, flickering (VERY)
black-and-white screen. Nothing extraordinary happened to it, it just
died (heart failure?). I rather liked it, it was a hobby for me.

So...Any ideas? I have not seen any equipment for sale anywhere near
here. I was once told it was likely the power supply. I was looking at
opening it up, but it doesn't seem to open real easy. I also thought of a
simple problem like a loose chip etc. inside the machine (perhaps the
ANTIC chip?).

Oh yeah, it's an ATARI 600XL. If anyone can tell me what's wrong, what to
look for, or how to fix it, I would very much appreciate it. If not, I'll
have to scavenge for a used system. Once I determine the bad piece, I
could open it up and perhaps end up with 2 working systems!

I was pleasantly surprised to find out just HOW alive the Atari 8-bits
were. I knew they were a great hobby system, but thought I was the only
one that still thought so! However, please mail any replies to me
(dos021@freenet.mb.ca) instead of just to the newsgroup since I'm not
real regular at checking in on newsgroups :-)

Thanx in advance,
Darryl.

Glad the Atari community is still active.
I just added a 1200XL to my collection and it displays only black and white?
It is connected to a Commodore monitor with luma and chroma inputs.
Works fine with my 800, is the video different for the 1200xl?
thanks, Jim.

Tom Hunt <tomhunt@bright.net> wrote:

> Tell us about SIMPQWK80, is it something from the land downunder <

Hi there Tom, long time no chat with. - Yes indeed SIMPQWK80 is from the land downunder.. - It is a QWK 80 column offline Reader I wrote for the 8-bit users of my BBS after I had completly re-written the message base system of the board to handle QWK support.. - SIMPQWK80 also supports any other type of QWK packet form, from any other BBS as well. (cause it only uses the messages.dat and control.dat files from any packet and ignores any specific BBS files like the index files etc)

It's not as fancy as some offline Readers, and the reply part of the reader is a bare bones type of thing, but it does everything I want it to do and my users seem happy enough with it... <grin>

I haven't released it officially as yet cause I haven't had the time to write any documentation file for it, but I'll get to it one of these days, then I'll figure out some way of getting it uploaded to one of the Internet sites...

Oh come now! Ever heard of "Lynx" !?!?! I use it to browse the Web since
my PC can't be hooked up to the Internet except via a shell account and
terminal (Telix for MSDOS).

I can also use it with either Ice-T or FlickerTerm80 on one of my 8bit Ataris.

In fact, I'm working on a front-end for Lynx which runs on the Atari 8-bit,
so you can use a dedicated 'web browsing' program on the Atari via your shell
account.

Right now, all it's made of is a BACKend program for Unix (which is a frontend
for Lynx) which gives the program which will run on the Atari a stable and
predictable interface into Lynx - and it does a lot of the time and memory
consuming parsing and filtering. It's pretty cool. :)

And of course, eventually, there may even be graphics support for the browser!
Cool, huh!? :)

LG>
LG> Is the file corrupt, or is there some special procedure I must use?

After a proper load of Disk Communicator 3.2, you should see a menu on
your screen that looks similar to the Bob Puff Super-ARC menu. If you do
not see this then the file may not be good. As Bob Puff was a big booster
of WordMark's MyDOS, you might try running the .COM from MyDOS. Another
possibility is that the person who uploaded the binary did so using a file
format such as SpartDOS or DOS-XE "enhanced". Only ATARI DOS 2.0/2.5
"single" density is considered a "universal" ATARI DOS format.

P.S. Did you remember to turn --BINARY-- mode --ON-- if you were FTP-ing?

P.P.S. If you just signed off an InterNet sight, did you "COLD BOOT" (i.e.
cycle power ON/OFF) before you went to DOS ? Perhaps an "R:"
device handler was still resident in memory and conflicted with the
.COM file in some way ?

Most 800XL have all their I.C.'s on Sockets. If it's been sitting
around for a couple of years and has been 'bounced' around the first thing
to do would be to take it apart and reseat all the I.C.'s. Just raising and
re-inserting them will be enough for the chip legs to make better contact.

>: exactly is it?

>Header + raw disk data, pretty much.

I though ATR is an image of a 8 bit disk... As you could set up a ATR
image with whatever density and number of sectors you wanted...
Perhaps someone has a FAQ on it, please post a location where to find
it...

>: I have no desire to do PC emulation, I just want to get the files onto my
>: 8-bit, without buying a dedicated cable or anything else. What is the best
>: way to do this?

>You either:
> 1. are TOTALLY against using a PC with an Atari
> 2. have a nice hard drive setup on your Atari
> 3. don't know what you're missing (ie, never seen APE running)

Cmon. These are not reasonable answers... There needs to a way to
convert from an ATR to DCM somewhere... People have perfectly working
8 bits, why should they buy those things mentioned above. People
should be able to d/l a ATR file and be able to process it on their
own 8 bits...

>: Can I extract the files from the ATR image on a UNIX machine? I have a modem

I used to play this game. I think this was a "pre-release" of a complete
game called "Montezuma's (sp?) Revenge" - that's where the name came from.
I also believe it was inclomplete. It featured the same characters and the
same type of environment.

Oops, I forgot that... Of course I meant to make a cross compiler only,
a native gcc on a 6502 seems impossible (not only because of
gcc's size, it also would be _really_ slow). Moreover, to make a
native gcc on some system, this system should be something at least
somehow resembling an operating system _and_ you would have to write
a C library (or at least parts of it). Much work to do... :-)

You probably mean the lcc port I mentioned in my initial posting?

With this I tried to compile code containig the fragment

while(*p) ;

with p being a char *.
The resulting assembly code was really a Bad Thing: It contained about ten
instructions, (involving integer promotion of *p) where a simple

ldy #0
label: bit (p),y
bne label

or something like that would suffice...

I hope that gcc would perform better :-)

Greetings,
-Gerhard

1647. great Atari game sound

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-25 00:00:00 UTC
From: jlendino@panix.com
Message-ID: <jlendino-2503960002240001@jlendino.dialup.access.net>
Source record: 85072

I grew up playing Atari 800 games and to this day, I still remember the great soundtracks on many of them. I've since started composing music in my home studio. I find that I'm interested in programming soundtracks for new games, largely because of my influence from the Atari 800, and from games that came out for the PC in the late 80's and early 90's (Kings Quest IV-VI, Might and Magic, etc).

Does anyone find the soundtracks for games like Ultima III as incredibly kick ass as I do? I thought that was phenomenal. A great port was released for the Mac last year that uses high-res graphics and a stereo version of that beautiful soundtrack. Or how about Gyruss? Nothing like 360 degree rotational movement, accompanied by sped-up Bach, to keep you glued to the edge of your seat.

I hear that Tempest 2000, for the Atari Jaguar, has a great techno soundtrack, but I haven't heard it yet. Those machines are getting real cheap, so maybe I'll get one.

Best,
Jamie

How about this idea, to handle stacks? I read a similar thing in an issue of Dr. Dobbs Journal, in an article about a small multitasker.

Given that the stack is mostly going to be used for minor parameter passing and jsr's. I think is a good assumption -- other data structures are better suited for larger jobs.

Instead of copying the stack to and fro on every task switch, how about subdividing it? Each task would be allocated a portion of the stack. A task switch moves between the portions by adding or subtracting numbers from the stack register.

For example, let's say that we are currently on task 1. Its stack is partially filled. The stack register holds 240. Now there is a task switch, to task 2. The interrupt service routine stores the depth of the stack register on task 1's stack, which in this case, is 16. Now, the OS has also recorded where task 2's stack pointer was the last time it was active, in the format of 192 - n. It loads up n, subtracts it from 192, stores that in the stack register, giving xxx in the diagram below (the correct stack entry), and executes an RTI. It will return to the appropriate point in task 2, because task 2 was halted by an Jump-to-Interrupt (forgot opcode) to the OS, and the last thing put on the stack was the return address to task 2's state. So the RTI will return to that state.

Now, how to handle allocation of the stack? Well, some routines, particularly those needing recursion, need a lot of stack. Others don't need much. So when a task is initiated, it can request how much it expects to need, and the OS can allocate such-and-so.

```
256 -----------------
: Task 1 <- 240: 256-16
:
192 -----------------
: Task 2 <- xxx: 192-n=03
:
144 -----------------
: Task 3 (small)
112 -----------------
: Task 4 (wants
: lots)
:
48 -----------------
: System
```

```
: or Free
=050 -----------------
```

What do you think? Is it workable? (Again, due credits to Dr. Dobbs' article by whoever wrote it.)

I guess, it will not work. The tasks cannot be executed independently. Only
the task on top of the stack will work without causing errors. Assume the
parameters of task 1 have been pushed to the top of the stack. The parameters
of task 2 are below of them. Now you try to execute task 2. Your stack
register will point to the bottom of the parameters of task 1. Pushing any
data to the stack will overwrite the parameters of task 1. Assume your
system decides to execute task 1 after executing task 2. Since the parameters
of task 1 are corrupted in this case, the system will crash.

Hi There...

I just bought a second hand Atari 600XL, and a 1050 Disk drive...
I was wondering if anyone out here in Atari land can help me as this
is I never owned an Atari before...

1: The 1050 Diskdrive didn't have a power supply or DOS
disk with it.

What voltage does the 1050 use? I can then buy a power supply for it
(Note that I am in NZ which uses 240V)

Are there any PC app's out there to read and write Atari disks? Is it
possible to get a copy of the DOS disk via my PC and write it to a
floppy at all?

2: Cartridges...
Will the 600XL accept cartridges for the older 400/800 Ataris?

Thanks again for any help...

Regards

kev.

The answer is that it could be an Apple II OS, but it isn't for
right now. Although it is written for the 6502, it utilizes hardware
features not found (or differently accessed) on the Apple II. So until
someone ports it, it won't run on an Apple II.

(Guy from DE can't get his 800xl up.)
Sascha,
I suggest you get another 800xl. It would make things a
lot easier. First, open the computer up and very closely
inspect the board for cracks. You don't need a disk drive
attached to the board, just power supply and hookup to a
monitor or TV, the READY prompt on a blue screen should come
up when you turn it on. If the board looks ok, then you need
to swap out the Large Scale Integrated circuit chips. Swap
out as many chips as you can, that's where the second 800xl
comes in. The chips should be in sockets and you should take
great care in removing and re-installing them. Barring this,
you need at least a volt/ohm meter, logic probe and some
schematics to check the board. Even an oscilloscope if you
have the schematics and know how to use the oscilloscope.
There's no 'simple' way to tell you what's wrong with your
computer, you're just going to have to try to get it
running. Maybe there's someone near you who is knowledgable
about fixing 800xl and can help you.

This method will work just fine, it just gives small stacks by
dividing the large (can you call 256 bytes large?) stack into
smaller stacks. Now providing all tasks play by the rules and do not
use more than their stack allocation there is no problem. I believe
that this is what the non MMU version of his OS does. You still don't
have seperate zero pages though :(

1659. Atari Trade show Schreiersgruen GER

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-25 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <4j6m3n$h7k@widukind.worms.fh-rpl.de>
Source record: 85084

Hi to all out there! Schreiersgruen greets the whole world !

It's done the show is over the visitors are happy.
Let's have a look back to Sa. the 23 of March. Let's do the timewarp again..

The show opend at 10 o' clock in the morning. After an hour entered the people massiv all Trader's and the air was melting at 12 o' clock. The show was held in a ca. 90m*m great room in the first floor of a pub. After a few hour's the place between the several Trader's was filled with Software and Hardware thirsty people. The show was melting after the people had gone down in the pub to get back power from a great meal and came back to the show. The people where refreshed and ready for the final buy and talk round. At 17 o' clock was the show closed, with a smile on Traders and buyer's face. There where following Trader's:

Ke-Soft with many Infocom Adventures, Seven City's of gold, Gemstone Worrier, Lords of conquest, XE game system Soft, Classic's and some new Polensoft. He was very happy because he was over run after an hour and it lasted many more.

There was also AMC Soft/Portronic and the interested people have been happy because they bought the multipad 3, Sound Blaster, Stereo Phaser, CX85 10er Tastatur, Herbert, Print Star, Super Ski 3D and many more of Armin's Hard-/ Software stuff. They could also test their new stuff.

The place where Kaisersoft was , was loaded with great amount of Polensoft and classic' s. The visitors could play and buy the latest Polensoft about 10+ new games. The could watch the latest Demo's from Poland and other's like the RAM Demo's and buy other Soft from Kaisersoft.

There was an extra place for Highlander Soft with it's Turbo Basic Distribution, Ram Demo's and a new build Book Order Service. Raimund Altmayer was showing and introducing the ST-XFormer, including a manual he has written for easy "start and use" guide for the ST-Xformer. He was over the whole show very busy to answere the questions and show demo's and other stuff.

The Lengenfeld ABBUC Regional Group sold many hardware and Software.
He was the main guy for the organisation, by the way he did a perfect job, thank's to Helmut Weidner one reason more for the great show. He stated that he will make the organisation of the show next year again.

A little place was reserved for the new game system of Atari. There was the Jag and the Lynx. Both showed many of their high rated Software games.
The people could play for free and test how strong these systems are beyond the "OLDIE" Atari 8 Bit. The people enjoyed to rest for a while before they become back the Konsumrausch.

The many people who showed and sold Hard/Software have had great buisness.
The Organisation and Trader where very surprise of the great success of
the show and will come to the next show in Schreiersgruen 97. It was a great
surprise because the date vor the show and the place have been told the people
very late and many German Disk Mag's have not reported about the Show.

Ok Fact's for you to understand how great the success was:
70+ visitor's payed the symbolic 1 MarK, About 10 Traders in a 90m*M room.
This is now the the show that can compete with the ABBUC JHV the greatest
Show in Germany for Atari 8 Bit Systems. The organasation and Traders believe
that the show has been visited by more people if they had known it earlier.

So if you are a German or live near Germany (England, France, Belgie, Italie,
Austria, Swiss, Poland, Techslowakia) try to visit our next Atari 8 Bit showes.
You won't be disappointed but always ask before for Soft/Hardware that is there.
A very little people couldn't find what they searched.

WE Kaisersoft (Polensoft/Top Mag RAM Musik Composer) Highlander Soft (ST
Xformer/Turbo Basic Distribution / Ram Demo Coder) Ke Soft (Atari Software/Musik
Programmer trader of many games) Helmut Weidner (Organisation ,Lengenfeld ARC)
and AMS (Andreas Magenheimer Soft, Dos Freak, Software and Hardware Tester)
me ST org (Internet German Atari 8 Bit Show/soft/hardware Distribution, St
Xformer, Internet Downloader Porter to XL) and the other second hand trader are
very pleased with the show and will support it next year.

This is "just" the same 14 MHz 65816 from WDC, being pushed to 20MHz.
Not anything new.. That's what the guy who posted about it originally said
in e-mail.

So are they getting lucky, or is it support hardware on the ZIP that
isn't supporting higher than ~14 MHz?

Using XFormer.

Create an ATR disk somehow (using APE or SIO2PC) and then load it into XFormer as a drive, load the disk you want to copy into another drive, load DOS into drive 1, and copy this disk.

Hmm, APE v1.07 is running fine on two P100's around here. I've had problems with SIO2PC not running without disabling internal and external cache though.

> Wrote Steve Tucker about it, and he said try a slowdown prog.

Are you using v1.06? I had troubles with that one. v1.07 is much more stable.

>
>ehh, It's not commercial is it?

The source for cc65 is on the major Atari archive site:
ftp://atari.archive.umich.edu/atari/8bit/Cc65

For doing any porting you'll probably want to get the UNIX modifications, and
go from there, rather than the original Atari source.

The code is fairly portable, but may need some tweaking on other platforms.
I've been able to compile it under OS/2 fairly painlessly. When some people
expressed interest in a DOS version, I put the binaries up on my web page.
The files in one package work under either operating system (with appropriate
runtimes.) Just a FYI, if anyone is interested in a version for either of
those platforms:
http://www.agate.net/~rfoss/cc65.html

In general the compiler isn't too bad, sometimes the optimizer seems a little
wacky. Unoptimized code will work fine, but the optimized code will just
lock up. Also the C library probably could be more robust. However a
set of libraries with extra functions for controlling graphics and
input devices helps. I doubt it is suited to a major project, but is nice
for whipping out small quick applications. Also from what I can tell, there
are some outright bugs in the UNIX source for the extra utilities like
'printobj' that come with cc65. But that shouldn't be a concern for doing

a port of the basic package.

P.S.: Cc65 was written to produce Atari 8-bit executables. You'd need at least new runtime libraries to get it to work on other 6502 machines, and other code might be necessary. Just thought I would mention that, because this thread seems to be cross-posted all over the place.

If you go to a store that has really stupid people working there, you can get away with getting carts out of a package and taking price tags off something else and sticking them on the carts. I did this to get Colecovision Space Panic, which was in a package of other games I already had, including 2 Donkey Kongs, which they were selling all as 1 item!

AlenSmithe@aol.com <---Yes, I know AOL sucks; I'm working on getting rid of it!

There's nothing we wanna watch on TV tonight, but we're still gonna watch something great- with our RCA VideoDisc player and VideoDiscs! Just flip a switch, and on OUR TV we see Airplane or The Pink Panther, The Godfather or Grease, Muppets, monsters, Mickey, MASH and 100 more, starting as low as $15! And the player costs less than 500! Put it this way; we're watching a GREAT MOVIE! And you're watching- us.

Made my own 1 chip Sio2pc interface (cable) i while ago but i just can't get i work... I've dubble & tripple test it and the connections and voltages seems right... My Pc even see the Atari 130 Asking for Diskdrive status but it looks like my Atari never see a proper answer... What is wrong? Please help... Is my Atari fault or does my Pc have some timing difficulties? How do i correct this? I actually have a few extra (broken) computers to take parts from...

I am also wondering wich programs support the 1 meg 130 ? Does anybody of you have that monster 130? I both have the half meg upgrade and the gumby upgrade but i haven't been able to test them yet...

Thanks in advance

I had almost forgotten about lynx. Even if a provider doesn't have lynx, you can still use it if you telnet to-

lynx.cc.ukans.edu

and log in as www or lynx, or even linemode. Even with isp's that do not provide a classic shell account, but only support slip/ppp, there are usually about 10 commands which you can get to. One of those commands is (usually) the telnet command.

Just what is the history of this game? I have an official version on disk
and it is definitely the 16K version. When you solve the game, it starts
over, but the "blackout" levels begin one level earlier. I never made it
through the game enough times to a blackout beginning at the first level. I
don't know what would happen after that.

Later on, I learned of a 32K version of this game. I have a "borrowed" copy
but it's much harder than the 16K version, and I never solved it. I have
heard something about a giant guardian of the treasure you must defeat/evade.
The 16K version just had a bunch of chains you would jump to and fro on,
collecting treasure. What exactly happens at the end of the game in the 32K
version?

Was the 32K version officially released as well as the 16K version? This is
all very puzzling...

1674. Anyone want a Super Sketch for their 8-bit?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-26 00:00:00 UTC
From: matthewp@netcom.com
Message-ID: <matthewpDovxAG.GMC@netcom.com>
Source record: 85013

Just recently, I came across a store that had a small quantity of 8-bit stuff. They has shrinkwrapped Super Sketch devices (sorta like a drawing pad) and some shrinkwrapped (or new in box, I don't recall if they had actualy shrinkwrap on them) Q*bert's and Froggers. The guy was wanting $25 for the super sketch, but he told me he'd take $18 if I bought a couple, and was wanting $8 for the carts. I'm sure I could talk him down on those too.

I didn't need any of it personally, but since I'll be going back soon for some other stuff, I can pick up some of them if anyone is interested. It may be that nobody has any interest, or the prices are all wrong, but I though I'd tell you all anyway... ;-)

Have you tried Mitsubishi. Most of their 8 bit single chip controllers
are 6502 based. They have windowed UVEPROM and piggyback (an EPROM
socket on the top of the package) versions.

(Marc asks if he can hook up a 'regular' cassette player to 800xl.)
Marc, (I hope I got your name), NOpe, huh uh, You can't. Atari used a
FM type cassette that is unique to
Atari as far as I know. Regular cassettes use some kind of AM. I may
be all wet, but that is my understanding.

(Richard wants to know about timing on sio2pc and also how to maybe get
some data off a data filer disk.)
Well, Richard, I wrote this program. It is still in the 'development'
stages, but I use it (but then I get scrambled FATs sometimes too.) If
you brave, the program is intended as a 'replacement' to Marslett's
'Util'. I does keep a crc so you know if the 'file' gets transferred
correctly, which 'util' doesn't do. Anyways, the program is 'sector
based', that is, it shouldn't care what DOS you're using (but it does
right now, I think you gotta use SparaDOS.) Anyways, it'll read any
disk on an Atari drive and make a file out of sectors. You could, say
dump all 720 or whatever sectors to a file, take the disk to your pc,
read the file into your pc. Then use Von Berg's 'listr' just to looke
thur the sector dump and maybe figure how to extract the data.
Now, sports fans, I KNOW everbody wants this. I ul a long time ago to
umich, but I don't think it ever posted, maybe because I ask it be
pulled. So, uhm. Rich, you want I should send you a copy?

OK, when I posted that I was forgetting that this thread is in three
newsgroups I don't normally read, so I apologize for not giving more
info before.

CC65 can be found at the University of Michigan archive,
archive.umich.edu:/atari/8bit/Cc65/. It was designed for the Atari
8-bits, but should be portable to other 6502 systems. There is Unix
source for the cross-compiler there, and that may be portable to other
host OS's.

(No Bill, it's not gcc, but a 6502 isn't exactly a 68000 either.)

I'm pretty sure that Rob Funk did indeed mean "cc65". It is an
Atari 8Bit C compiler, that can also be configured to be used as a
cross-compiler. It is located on the atari archive at archive.umich.edu.

:
You're right. One could however implement this as a subroutine,
involving a space/speed tradeoff.
Another possibility would be to implement pseudo-opcodes, for example
by a brk instruction followed by a byte indicating the desired operation
and additional parameters. The IRQ handler would have to interpret
the byte and perform the desired operation.
For 32 bit addition, this pseudo-op solution would probably be quite
a bit slower (twice as slow perhaps) than having
a macro directly in the code, however it would
certainly be feasible for floating point operations (or even integer
multiplication/division).

Actually I think that one would rarely want to use 32 bit ops on an
8 bit system at all. Nevertheless they should be implemented in a
compiler (because ANSI claims 32 bit longs ;-). Let me repeat here
that I only meant to discuss about a _cross compiler_ to the 6502,
even if there are 6502 systems with 4MB RAM and 128MB HD as indicated in
another posting :-)

So there *is* a crosscompiler after all. I searched the net for cc65/lcc and all I could find was a compiler for some really old 8bit'er called "Oric", of which I have never heard. Even though it does have the same processor as does the old model C= 64, i.e. a 6502, I find it hard to believe that it could compile code for a C64 as well (unless of course the two machines are essentially identical in terms of other hardware as well). Well I hope I'm wrong. Can anyone confirm whether or not it does compile code for the C64, and where I can find it - the link to the source was wrong. If there's an executable for Amiga available, that'd be even better.

1686. Graphics programming

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-26 00:00:00 UTC
From: rfunk@magnus.acs.ohio-state.edu
Message-ID: <4j81ss$bhl@charm.magnus.acs.ohio-state.edu>
Source record: 85099

OK, so the other day I picked up James Gleick's "Chaos" book for $3,
and it has lots of stuff about using computers to draw fractals and
strange attractors and all that....

And I have this 16 meg Pentium-75 on my desk running both X-Windows under
Linux and Win95, with a 1 meg 24-bit per pixel accelerated graphics
card...

But I realized that programming either of those systems to do graphics
is so wrapped up in stupid minutiae that by the time you actually have
a place to draw on the screen, you forget what you're trying to draw.

So I was glad I have the 1200xl set up just above the pentium. I
wrote about 10 lines of basic code (including just two graphics calls,
gr.24 and plot x,y), and within a few minutes I had a Henon Attractor
on my screen, dot by dot.

Why isn't there a graphics API that simple for the big computer?
And why am I starting to feel like I wasted a lot of money here? :-)

Imagic 1.0 for Win95 will be out in a few days at my web site. It can
convert XFD/ATR/DCM image to and from any of the
three formats just by dragging any number of images over
to the window you want. (like drag 1000 ATR images into
the DCM window and they all get converted to DCM images).

The page is http://www.nacs.net/~classics. It will be
there in a few days, but why not stop by now and check
out APE? :)

1690. SIO2PC Timing and Home Filing Manager

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-26 00:00:00 UTC
From: richard@manawatu.gen.nz
Message-ID: <4j9kf3$5pv@news.manawatu.gen.nz>
Source record: 85103

I'm trying to use SIO404 with my 130XE (standard), XF551 (also standard), and my Pentium 90 (16Meg Ram).

It works just fine when I read from SIO2PC, but when I try write to it, it has a little burst, then just sits there doing nothing. I surmised that it has something to do with the timing, and I realise that I can adjust the timing with "(A)lter timing..." but which values am I supposed to adjust when it's just the writing to a virtual disk that I'm having trouble with?.

I'll try some values later, but wanted to post this as someone may be able to help before I find the right values.

The reason I'm using SIO2PC at the moment is to try convert some disks for a guy who has a database created with Home Filing Manager. Because the data is not stored in normal files - it's one of those direct to sector writes, as the directory comes up with something like:
Home Filing
Manager...

I was going to convert the program and data files to the PC, and then try the demo of XFormer to see if i can convert them, and if not, then I'll suggest he buys XFormer to run his database as he no longer uses his 8bit (I presume, as I don't really know the guy - he just got my name from the local internet provider (who is a friend, and knows I use an 8bit)).

I can't copy the Home Filing Manager disk itself, as it says that it's Medium Density (130K I presume) but when it gets to near the end of the disk (I forget which track sorry!) it starts grumbling away about errors, on every sector - so I doubt it's a _lot_ of bad sectors being made on the original disk. When I get the timing values fixed in SIO2PC, I'll just try copying it as a single density disk, incase it should actually be that instead.

I have no idea after that how I'll convert the data to PC files though, but I'm hoping that there's some way of saving it as something other than Home Filing Manager's specific format. Failing that, he can always use XFormer to view the things (providing it will run Home Filing Manager ofcourse).

Anyway, after reading all that I thank you, and if you can help with any of those things (especially the timing values) I'd _really_ appreciate it.

Thanks,
Richard.

I think that by this point nobody is really going to care. It really yanks my crank that the Apple and the C64 have such huge archives when theres squat for the 8 bit.

BTW has anyone other than me notice that Xformer for the PC is an incredible piece of worthless garbage? Yes I did buy it ver 3.3, and it sucks. I have AppleWin for the Apple emul, and C64S which I gladly paid for because it works very well, and then we have Darek Mihocka who can't seem to properly write an emulator even on the immensely powerful PCs that abound today. I wish someone else who knew how to program would pick up on this thread and develop a -good- Atari 8-bit emulator. I mean jeez, one of the apple emulators was done as a side project, and the guy managed to emulate a mockingboard when he never even saw the original hardware...

Knowing Darek on a semi-personal level and knowing that he is quite a talented programmer I would agree. I'm not sure if it's the complexity of the machine (we haven't exactly seen a 2600 emulator worth too much, yet, either and having tried the Activision pack #3 I'm still waiting) or lack of effort. I think the big problem there is he's both busy as Xformer is also a side project for him and that he say's Xformer does things that it does not. Examples include:

1) Sound. Barely does anything. Pure tones aren't accurate and distortion is non-existent.

2) Flickering.

3) Bank selecting doesn't work properly and I have to use Atari 800 mode to run software. If you're stuck thinking it does nothing try Atari 800 mode and you'll see a lot of software run or at least partially run properly. Zaxxon, Miner 2049er, Pac Man, Star Raiders and many others.

4) DLIs are off.

5) Collision detection is off.

and others. I think saying all this stuff works is dishonest, and, of course, telling him about flickering in the emulator results in him nasty messages that don't bother me a bit stating that I 'whine'. It's kind of a joke.

On the topic of an archive, I too cannot believe people that are against an archive for legal reasons...and I guess that's the only reason. I hope that these people do not speed, either, as that too is violating the law. In Wheaton, IL there exists a law on the books that ladies cannot walk down the street in high heels (this stems back from the 20's when ladies would trap their heels in between the wooden boards making up the sidewalk and break their ankles). The point is that some laws are execessive and there's a difference between what is going to be enforced. The law making body in Wheaton is not going to appeal that law beacuse that would be a waste of time...instead it is unenforced. Apparently Apple II and C-64 programmers/development houses recognize the lifespan of a piece of software is a few years and after that (depending on the type of software...utilities and applications usually go through upgrade cycles whereas games do not) they do not make money. Activisions C-64 classic pack throws an interesting wrench into this. I'm not will to pay for those games...but I do like to have them...if I'm going to spend money on software then I'd rather buy a new package and after seeing the 2600

pack and buying it solely for the emulator I think Activision should stay away for the recycling market. In conclusion, if a copyright holder of a C-64 game wishes to uphold their claim to it then fine, but most apparently do not...so long as authors really don't care then I don't see it as a big deal.

1694. Re: STILL WANTED 8 BIT ARCHIVE

My $0.02....

(1) Emulators are nice, but hey - it's still *very* easy to pick up 8-bit hardware today....and nothing runs your 8-bit stuff better than a *real* Atari machine. I personally prefer my "Intel Outside" Atari 800 setup (I've got my old 386sx slaved to it for SIO2PC) to an emulator any day.

There *are* emulators for other platforms that I find truly useful - especially Apple and TRS-80....

(2) I really wish there was an 8-bit FTP site up somewhere. The legal issues seem largely moot.

I received email recently from Scott Adams (the Adventure International guy), and he basically said that (a) he doesn't even *know* what the copyright status is on all his old stuff, and (b) he'd love to see his stuff on an FTP site. I forwarded this to the group a few weeks ago, but it didn't seem to attract too much attention...

Check out thrift shops. I regularly hit these to pick up "vintage" video games and computer equipment, and find Atari 8-bit equipment pretty regularly. Prices will vary depending on where you go, of course, but are generally pretty good. As an example, I've picked up several Atari 800s in good working order for less than $10 (one was $3), and I picked up a 1050 disk drive a few months ago (also in good shape) for $4.99.

Have fun....

You have to get an Atari cassette recorder, which connects to the 13-pin
port on the back. I don't know what the used home computer market is
like in Europe, but in the US used Atari disk drives are so inexpensive
that it's not worth bothering with a cassette.

updated 03/26/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$10.00 Astro Chase (Parker Brothers)
$ 6.00 Atari Logo
$ 6.00 Atariwriter
$ 6.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$ 6.00 Centipede
$ 6.00 Computer Chess
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$ 6.00 Joust

$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$ 6.00 Millipede
$ 6.00 Missile Command
$10.00 River Raid (Activision)
$ 6.00 Super Breakout
$10.00 Super Cobra (Parker Brothers)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 130XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$59.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE, with one (1) Molex connector cable.

This disk drive doesn't include the power supply.

$34.00

*****

>to assist me ;-)

Yes, I worked a bit on this. What I currently have is not fully
functional but implements most of the things required for a full
ANSI compiler. I never anticipated anything but a cross compiler,
using my workstation to compile code for my herd of Ataris.

Note that there are some choices to be made about whether an
``int'' should be 8, 16, or 32 bits long. ANSI requires at least 16,
and most programmers assume 32. (Before anybody asks, GCC allows you
to specify any size for all of the basic data types. It is very
flexible.) More choices for floating point format (I used a switch
to select Atari 48 bit with assumed AtariOS math functions, or 32/64
bit with assembler macros that you'd have to supply).

But the biggest choice of all is whether to let GCC manage the 6502
registers directly, or to use a sort of ``virtual machine'' model on
the 6502 that looks better to GCC (page zero registers, manipulated by
simple bits of native code that GCC thinks are single instructions).
I tried the former, and it was truly amusing to see GCC try to figure
out how to evaluate complicated expressions using only those 8 bit
regs. The code was awful! So I think the second route is better.

I'd be willing to help out with this, though my time is limited.
Perhaps we can get a list of folks together and discuss the basic
design goals.

Dave

1702. XL-It! Atari 800XL Emulator

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-27 00:00:00 UTC
From: magi@stud.uni-sb.de
Message-ID: <4jc9in$3qt@hades.rz.uni-sb.de>
Source record: 85027

Hello !

After two weeks of work I make the first version of my Atari XL
Emulator available to the public.

"http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html"

This URL will give you more information.
Actually there is only a version for Linux (intel) and SGI available.

The emulator is free and later (actually v 0.1) versions will be
available for SUN and M$-Windows, too.

Bye,
Markus Gietzen

1703. Wanted info on Software Sprites

> This is how you *HAD* to do it on the Atari 2600. ;-) And you had to
> store the Player graphics pattern byte every scan line you wanted it to
> change (no DMA)!

Actually, I can't think of any 2600 games that used this approach. The
2600 has something called a player replication register... basically, the
number you put into it would be the number of times the sprite was
repeated across the screen. This is how you can get an entire row of
space invaders using one sprite, with no flicker.

This whole thread is misnamed anyway. A "software sprite" is what you
get when you emulate a sprite in software by blitting. What's been
discussed so far are ways of manipulating hardware sprites.

I couldn't possibly agree with you more. In those days, the music was truly amazing. It seems nowadays, there's just too much cheese ;)

Let me tell you, the days of the ultima series - now there was a set of music. They had it down, and it made the adventure that much more intense. Another worth mentioning would be Alternate Reality...more terriffic music. You know, it's funny, but I'll sit in my office at night working on my pc (ugh!), and in the background will be the light glow of my atari 130xe, Ultima III main screen up, playing the soundtrack....

Does this mean I have no life? ;)

You used to run Oasis, correct? It's been so long, that I'm trying to
piece memory fragments back together again. Do you still live in
Christchurch? Or, was that someone else? Are you still running Oasis
4.7? I'd love to hear about your bbs. Have you tried cross-netting
with other QWK based bulletin boards? Remember Hiram? I haven't
heard from him in YEARS. One darn nice guy, though. I miss the old
network. Oh, yes. I believe Perminant Waves used to net with us,
also. I think he is running Express! on an ST. Remember John Oreo?
Haven't heard from him in years. Then there was the guy I co-wrote
the action runtime for Oasis with. I forget his name just now, but he
is also running an Express! ST bbs, called ETEXE.

Probably not much help for hobbyists, but on March 22, 1996 WDC announced
that they would make a mixture of their processor cores with ROM, RAM,
I/O, UARTS and Timers. They also mention the possibility of migration to
ASIC path coupled with factory-dependent EEPROM, SRAM A/D, D/A, LCD, and
other such modules.

1710. XFD to ATR translation.

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-28 00:00:00 UTC
From: bbs@vectorbd.vivanet.com
Message-ID: <4jeobj$i5v@vectorbd.vectorbd.com>
Source record: 84957

The ability to translate between .XFD and .ATR disk
images can be quite easily performed by a readily
available (and free) progarm called AVDDEMO.ZIP,
by Creative Software Systems; Phone (616) 473-3904.
It's a shell program for PC Transformer. While most
of the features are disabled, the ability to add and
remove the SIO2PC header to a file is active.

The size of this ZIP file is about 188K and it runs
on IBM compatables. It runs fine on my '386 with
VGA display. It will *not* run on a PC with the MDA
display. A mouse is also helpful, but not required.
This program can be downloaded from the PC Transformer
web page:

Branch Always Software http://www.halcyon.com/brasoft/

It doesn't appear to be in the umich.edu Atari archive
in the "Xf2" subdirectory yet.

Create a new subdirectory called AVD. Uncompress the
file using "pkunzip -d avddemo.zip". This requires
PKUNZIP.EXE version 2.04g.

Copy a BACKUP of the .XFD file that will have the
SIO2PC header added into the AVD subdirectory.

Run atari.bat.

Click on "Done" when the advertisement screen comes
up <g>.

Select "VIEW OPTIONS", "DIRECTORY FILTER", and type in
"*.*" followed by a Carriage Return <CR>.

Click on the .XFD file to highlight it.

Select "FILE", "ADD SIO2PC HEADER", "OK".

Wait for a little while. It seems as though this
program makes two passes on the file... the first to read
it into memory, the second to write out the file with the
in its modified state. That's a guess.

The reason that I caution the unwary user to wait is
because when I first tried this, I saw the screen "blank
out" (while the file was being read) and then come back.
In my haste to see my results, I quickly clicked on "FILE"

"EXIT". The program let me do that with no squawking. Guess what? No change was made to my .XFD! So, be patient.

If a file that already has the SIO2PC header on it is selected, the program will do nothing.

Finally, rename the .XFD filename to one with the .ATR extention and you're done. The file should be 16 bytes longer than it was before. For example, a single density .XFD disk image is 92,160 bytes long. A single density .ATR disk image is 92,176 bytes long.

I have had good results using this method. It's a lot faster than getting into PC Transformer or SIO2PC, formatting a copy of an existing .ATR file, and then copying files over from the .XFD to the (freshly formatted) .ATR file within PC Transformer.

I am using a '386 PC with PC Transformer 3.31 on it, an Atari 800xl and an SIO2PC cable (Nick...I sent the check out on Tuesday!).

One can also change from .ATR format to .XFD format, using AVDDEMO, although I can't see any advantage in doing so. Does anybody care to comment on that?

>Thanks.

Have a look at the APE homepage, there is the requierd information + a
shareware for test.
It's a very competent software.
You need a little bit of interface for it, some few components that
you solder on a lab board, and some cabel and contacts.
I think that you also could by prebuild ones.

APE homepage.
http://seka.nacs.net/~classics/

Made for fun a drawing from the text files when I built mine, you
could have the arj file with the bmp and tif file of it in a e-mail
if you are interested.
The same interface goes for both APE and SIO2PC.
SIO2PC is a similar software, but does less neat things.

To Steven et al,

I was under the assumtion that SIO2PC gleaned the sector size for XFD
Images via the SIO Block Command issued by the Atari. Unfortunately for
any of us wanting to write a converter, the only way to glean this
information inside the XFD is through the Images DOS format itself. For
SpartaDos, and Atari Dos this may not be to difficult, but for others,
who knows...(Lets not even mention Boot Disks > 720 SD Sectors ok..)

I use SIO2PC, a program that runs on a PC that allows it to look like a disk drive to an Atari. The SIO2PC cable from Nick Kennedy connects the SIO port of the Atari to a comm port on the PC. At the Sacramento Atari Expo that was held on March 23rd, Atari Classics magazine was there and had a copy of a CD from Europe that has about 2500 disks that can be used with Xformer on a PC or an Atari connected to the PC with the SIO2PC cable. I hope this helps.

Gimme, gimme, gimme. I hear a lot of that. Maybe it's just not a financial success for a programmer to keep working on a program that is pirated as much as it is. At least with Gemulator, he gets to sell the board that fits in the PC for the ST roms. Xformer just isn't as much a cash cow, so why should he bother? To satisfy people like you? Why? If programming an emulator is so easy, go ahead and try it yourself. Then make your million dollars. What? You don't think you'd make a wad of money either? Hmmm.
I don't know why I'm even bothering responding to your crap. It's hardly worth a reply. So I'll quit now a spend the rest of my lunch relaxing.

3.5 is the latest now, but is pretty much the same as 3.3, except that it can use the cable that converts the PC's printer port to an SIO port, so you can connect an Atari disk drive to your PC. It will also handle anything else that would normally connect to the SIO, like an Atari printer/plotter, or maybe even the old 410 program recorder? Hmmm.

1716. Limited Time Offer...

SUBJECT: *VERY* LIMITED OFFER (3/27/96 - 4/15/96)
AND WHILE SUPPLIES LAST

==========
As you may (or may not) be aware, Atari Corporation has relocated our corporate offices to a shiny new facility in beautiful downtown Sunnyvale, California. Now, it's time to move our warehouse facility to a location that makes more logistic and economic sense to our offices.

I am pleased to say that I have obtained Mr. T's and Mr. T's and Mr. T's (one T didn't need to reply) authorization to dig amoung the muck and find some worthwhile "stuff" for our long term friends and supporters on the Internet. I was told to "put aside what you (meaning me) think people might like and we'll consider letting you offer it on-line for a weekend or two". I've done that and have gotten approval to give away the items below at incredible prices.

If you are interested in the list, please E-Mail me at 75300.1267@compuserve.com and I'll reply with the list.

Here's a better one: If you go into a store that doesn't have
those anti-theft devices at the doorway, you can just put stuff in your
pocket when there's nobody looking and then walk out without paying for
it. Of course, that's stealing, but based on your post I assume that you
have no problem with it.

I really can't believe that someone would stoop so low as to swindle,
rip-off,or cheat a thrift store...a store whose fundamental principle to
is to aid those in need. If a cartridge or system is above what you feel
you should pay then leave it there or consider the extra cost a donation
to the cause. But please don't steal from a thrift store...that is just
plain unkind...

I have heard this rumor before... So I called....

The parts they are shipping now are ACTUAL 20 MHz units. Some are marked
14 MHz because the cost to redo the number scheme on the case is pricey.

The units will run at 20 MHz, and I have heard that 24 MHz has been seen
by overclocking them.

>
> So are they getting lucky, or is it support hardware on the ZIP that
>isn't supporting higher than ~14 MHz?

Dunno, but 20MHz has been running at CMD for weeks. No glitches.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $0.25 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $195.00 for the 256K DRAMs, asking $0.50.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $0.50

MUST SELL, will consider any reasonable offers on this equipment.

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $0.01 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $0.01.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $0.01.

Both ATR8000 and Dual Disk Drives, $0.01

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $0.01 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $0.01.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. When ICD sold to FTE, I bought a bunch of Sparta Dos 3.2d disks
and manuals from FTE, my mistake Well we can rectify the mistake
I have at least 12 units of the new modified Sparta Dos3.3b that
I will include in the shipment of the units..price $14.00 ea
delivered with original disks and manual..Upgrade included..

If anyone has a problem with FTE, let me know..I have never
screwed Mike..and do have a working relationship with him..

Besides that he is only an hour and 15 min away from me..by air..

I have talked to him within the past couple days and he will
ship!

The new upgraded Sparta Dos 3.3B is Mux compatable and will do
the happy or the USD High Speed stuff!!!

I have been a supporter for the Atari 8-bit community so long I can't rember the date originaly..but I do remember going to a show in Pittsburgh, supporting the product, and being told by B. Brodie of Atari the nothing was going to happen, reguardless of how many users we had available..From that day forth I have had no fiath in Atari as a Corp!. They the Corp craped in our mess kit, and expected us to gobble it up! Would not happen..I have since bought up the rights to Hardware and Software..Still working with others on upgrading a system that everyone said couldn't be moved forwared!// Look at the new Sparta Dos upgrades and BBS Express! Professional (tm) and you will see we have excelled Atari Corps (narrow minded) concsption of the Atari 8-bit system..

Had Mr. Brodie extended himself at the Pittsburgh convention to us the users of the 8-bit. I might have bought the new items from Atari...where as he told us to F...of in essance I went IBM/Compatable like most of you did.!!!

Well, Atari Corp like it or not I will support the 8-bit community, and will be a damn thron in their side as a Stock Holder...Buy 1 share and you can raise hell..besides that the price is going up..not what I bought origanly at ..11.25 a share but it is going up...

Now as a NASTY to MR. BRODIE..what the hell would the Atari 8-BIT (notice the captilazitons) users like to see with in the next couple years? LEGALY that is??????????

In essance: You think you have problems??? I have lost a total of..$30,000 supporting a habit...atari 8-bit...not too smart!

But the need is still there!!!

Bob

1725. Copy Rigthr!

Newsgroup: comp.sys.atari.8bit

Message-ID: <4jct3r$2dr@news.tcd.net>
Source record: 85039

I have been a loyal Atari 8-bit user for too damn long..!!

I see those on the Net that want new software ect..But do not want to pay for it..I personlay have expended upwrards to $30,000 out of pocket expenses (yes I have IRS docs to prove it) supporting the Atari 8-bit community..with hardware (new used ect)..and Software..in both catagories..

While I would admit that BBS Express! Professional for the Atari 8-bit has been a marketable item it has not produced in all the years of owning it as this market on the Internet has within the pass 3 months..

Copyrights serve a purpose..take mine away from me and I assure you that with out CASH up font you will never see anything developed, now or in the future!

What the community as a whole has to do to get recogniton or support is to spend or relate to a producer of software/hardware support in the form of $$$ they are willing to spend, for a presicific item they wish produced.!!

I have been having problems with those that wish to produce, programers, engieers ect..Has cost me $$000,000. Do not wish to expend on their iffies!... You have a software/hardware item you want expanded lets talk? I will support those that support me..

The Xformer is going to kill the 8 bit even more. People who used to know and appreciate 8 bit ataris will boot it up, say, boy was this primitive, and hit delete, not knowing that an actual 8 bit was so much better. There is one for the MAC available that does everything Xformer is supposed to, and better. I think it's freeware too. Makes me want to buy a MAC. Instead, I am buying up 8-bits and making a CD of the software I can; That was the original message of this thread, which has been lost on my newsserver.

Anyone with software, please email Scharles@superlink.net
I am going to look into an FTP site.
Thanks, Yogi

I don't know Steven, but as I wrote in email to you, would appreciate
a converter program; you've probably seen what I trying to accomplish
by collecting an 8 bit archive; a lot of people have been responding
(well, 5-6) with XFD images; I plan on using ATR format so APE can
read it right off the CD.
Also, would assume you have a bunch of software. Would you like to
contribute?
Thanks, Scott

1728. APE?

Newsgroup: comp.sys.atari.8bit

Will somebody tell me what APE is? I gather that's it's some sort of program that lets you use your PC as a disk array for your 8-bit Atari, and that it's commercial. Where do you get it from? I'd definitely be interested in that. I've been thinking about moving alot of these old 5 1/4's to my PC for archiving before they all go bad.

Thanks.

1729. Re: SIO2PC Timing and Home Filing Manager

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-28 00:00:00 UTC
From: scharles@superlink.net

Source record: 85043

Home filing manager was a normal 720 disk, so after sector 720 thats
why you are getting the errors.
When I left the scene in 1986, I had converted the home filing manager
to a FILE; you still needed the full disk to read the data from, but
at least the program was a file, which has the best chance to run on
any emulator. Each sector in the disk stored one file; they were not
stored in straight ATASCII, as I recalll; the easiest way to get the
data would be to print it out and then scan/ocr it back in... time
consuming but I don't see any other way to do it, as HFM didn't have
any comm capabilities.....

I am posting this message for a friend without Internet access.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. All opened disks
and CDROMs have been tested and I will guarantee they work.

Rather than post separate for sale messages for each computer as I have done
in the past, I thought I'd combine them into one large list so people could
see everything I have available. If you are interested in anything, please
read the end of the message before replying.

Items listed in this order:
Part 1. IBM CDROMs, disk-based games (many), old business software, books
Part 2. Commodore 64/128 game software (lots), datasette, 2 books
Part 3. Amiga 3.5" game software and book
Part 4. Apple II+/e business software, books, plug-in cards
Part 5. Atari ST and 8-bit software (no games)
Part 6. Macintosh 3.5" software (several games)
Part 7. TI-99/4A cartridges (several games/education), 1 book
Part 8. Computer books

Feel free to make reasonable offers on anything below. Few prices are firm,
especially if you are buying several other items.

=== Part 1. IBM ==

IBM CDROM games (with manuals and jewel cases, no boxes):
Desert Strike - $12
Police Quest: Open Season - $14

IBM disk-based game software (5.25" unless noted otherwise):
$4 each

Don't Go Alone *

$5 each

Deja Vu II (VGA, 5.25" HD)
First Expedition
Scavengers of the Mutant World
Sword of the Samurai
Superstar Soccer (w/ C64 version) *
Willow - new, unopened

Zoom

$7.50 each

Eric the Unready (VGA, 3.5" HD) with cluebook

IBM ancient business software (all with 5.25" disks, manuals, and boxes):
Diskette Manager III (Lassen Software) - $4
Framework II Sampler (Ashton-Tate) - $4
PC Focus 3.0 (Information Builders) - contains User's Manual, Guide to
Operations, Tutorial, and Screen Painter manuals - $6
PFS: First Publisher 1.0 (PFS) - $4
Personal Time Manager (Prime Time) - $4
Professional Editor (IBM)- $4
Script/PC (IBM) - $4
Smarterm 100 (Persoft) - $4
TopView (IBM) - $4
TopView Programmer's Toolkit (IBM) - $4
Windows 286 2.1 (Microsoft) (package torn on top) - $6

Books:
DBase III Plus Handbook 2nd Edition - Chou, Que Books - $4
P-CAD Illustrated User's Guide: Printed Circuit Board Design
"048-0226-02 Rev 3.00 Kit Illustrated UG SW/MNL" -- still sealed - $10

Probably worthless books (free if you order something else and pay shipping):
CompuServe Navigator 2.1 User's Guide for Macintosh
CompuServe Alamanac 4th Edition
Genie User's Manual 1989 Edition
Using PC DOS 2nd Edition - DeVoney, 1987

=== Part 2. Commodore 64/128 (all 5.25" disks) ================================

$2.50 each

Deceptor
Desert Fox
Force 7
GEOS Desk Pack I *
Sky Runner

$3.50 each

Blue Angels
Die Hard
Oil Barons (heavy package)
Paperclip 64 *
Paperclip Spell Pack *
PHM Pegasus
Print Power (+Atari)
Top 20 Solid Gold (Cosmi) *
Top Fuel Eliminator

TV Sports Football
X-15 Alpha Mission

$4.50 each

Ace of Aces
Beyond Dark Castle *
Beyond Zork 128 *
Border Zone *
Bureaucracy 128 *
Defender of the Crown
Grave Yardage *
Kings of the Beach *
Millionaire *
Monopoly (Leisure Genius)
Murder by the Dozen *
Nord and Bert *
Phantasie III
Pipe Dream *
Tomahawk

$5 each

Pools of Radiance
Superstar Soccer (+IBM) *

Hardware:
Commodore 64/PET Datasette.....$7

Books:
Commodore 64 Programmer's Reference Guide (orig schematics missing)...$5
Commodore 64 User's Guide (2).....$3

=== Part 3. Amiga 3.5" disks ==========

$5 each

Jack Nicklaus' Golf *
Midwinter
Pioneer Plague *
Warlock
BOOK: Amiga Hardware Reference Manual (Revised) - Addision-Wesley, 1989

All 5 above - $25 delivered anywhere in the continental United States.

=== Part 4. Apple II+/e (all 5.25" disks) ==========

Following is a list of Apple software and hardware I no longer have any use
for. Feel free to make reasonable offers.

Business software (5.25" disks) -- $2 each
Advanced Business Accountant (Manzana)
(says "Full Featured Demo", comes in 3 rather large notebooks)

Avery List & Mail (Avery)
Managing Your Money (MECA)
Personal Pearl (Pearlsoft)
VersaForm (Applied Software Tech.)
Screen Director (Business & Pro Software)
Smart Money (Sierra On-Line)

DISKS ONLY only for almost every PFS:File, PFS:Graph, PFS:Write, etc -
50 cents ea. disk - can provide a complete list if interested
One game: Ultima II (Origin), missing the top half of the box - $1.50

Tons of Beagle Brothers Time-Out disks and manuals (no boxes) - DeskTools,
DeskTools II, Filemaster, Graph, MacroTools, MacroTools II, PowerPack,
Quickspell, Report Writer, Sidespread, SpreadTools, Superfonts, Thesaurus,
Ultramacros, Super Macroworks. If anyone is seriously interested in buying
the WHOLE LOT, please respond with your offer.

BOOK: Osborne CP/M User Guide "Special Microsoft Softcard Edition for Apple
II and Apple III Owners" - Thom Hogan

Probably good hardware (sold to me as working, kept in good condition, but
I never used them. I don't have time to test them. I'll refund your money
if they don't work):
Apple-brand MIDI interfaces (plugs into ADB port) (2 of them) - ??
APL printer card (Epson), no manual - $10
Microbuffer II 16K serial card - new, unopened - $20
Z-Card II (Advanced Logic Systems' Z-80 card), with manual - $10

Many issues of a specialty Apple magazine called "The Assembly Line". I can
provide a more complete list of issues if someone is seriously interested.

=== Part 5. Atari ==

Atari ST 3.5" software - $3 each
E-Z Track MIDI Sequencer - new, unopened (2 of them)
Personal Pascal *
ST Key *

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk -- will trade

=== Part 6. Macintosh 3.5" disks ===

$2.75 each

Crimson Crown
Enchanted Scepters

Frogger
Ground Zero
Mastertype
Rival 1.1.4
Time and Magik

$3.75 each

Click Change 1.04
Corruption
Deja Vu

$4.75 each

Mac Plot, standard V3.4
Pools of Radiance
Status Mac - 1991, System 7 compatible, unopened

Strategic Conquest Plus - disks only - $1.50

Note: Some of these games are old and may only run on older Macintoshes
with System 6 or earlier.

=== Part 7. TI-99/4A ==

Working cartridges - no boxes

$3 each

Beginning Grammar, no docs
Connect Four, no docs
Household Budget Management, w/ docs
Munchman, w/ docs
Personal Record Keeping, w/ docs
Superfly, no docs
Terminal Emulator II, w/ docs and keyboard templates
BOOK: Programming BASIC with the TI Home Computer - Peckham

Cartridges WANTED (will also trade the above for or possibly buy):
Beyond Parsec, Bigfoot, Computer War, Frogger (Parker Bros), Hopper,
Jumpman Jr., Space Journey, Spy's Demise, Star Maze, and Tris.

= Books ==

Amiga Hardware Reference Manual (Revised) - Addision-Wesley, 1989
Commodore 64 Programmer's Reference Guide (original schematics missing)
Commodore 64 User's Guide (2)
DBase III Plus Handbook 2nd Edition - Chou, Que Books
Mastering CP/M - Alan R. Miller, Sybex Books, 1983
Osborne CP/M User Guide "Special Microsoft Softcard Edition for Apple II
and Apple III Owners" - Thom Hogan
P-CAD Illustrated User's Guide: Printed Circuit Board Design
"048-0226-02 Rev 3.00 Kit Illustrated UG SW/MNL" -- still sealed... $10

Programming BASIC with the TI Home Computer - Peckham

Probably worthless books (free if you order something else and pay shipping):
CompuServe Navigator 2.1 User's Guide for Macintosh
CompuServe Alamanac 4th Edition
Genie User's Manual 1989 Edition
Using PC DOS 2nd Edition - DeVoney, 1987

==========

The above prices do not include shipping. I'm in California. Depending on how far away you are, how many items you want, if they have boxes, and how heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or priority US mail. I don't have time to deal with lots of small transactions, so I need to ask a minimum of $15 worth of items. If you buy a lot of stuff at once, I will make you a deal on the shipping. In general, a few pieces of software costs $4 or $5 to ship.

I will only ship within the continental UNITED STATES. No exceptions.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the message or in the subject header: "Forward to Randall". Because these messages will be hand-carried on floppy disk once per week, it may take me a week or two to respond. If you do not get a reply within 2 weeks, please re-send your message if you are still interested.

1733. FS Various Atari Components

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-28 00:00:00 UTC
From: Jim Lazarenko <jimbo@connect.ab.ca>
Message-ID: <315A3A71.3CE6@connect.ab.ca>
Source record: 85047

I still have the following Atari equipment for sale (actually I have a few peices more contributed by
friends). Some of this equipment seemed to have been sold, but I never heard back from a couple of people, so
here goes. All are in working shape, but have no boxes or manuals unless specified. Buyer pays shipping.

ï¿½ Atari 800XL with power adapter, but no other accessories
ï¿½ Atari 1200XL with BASIC cartridge, and power adapter
ï¿½ Atari 130XE with manual and all accessories
ï¿½ Atari 1050 Disk Drive complete with power adapter and connection cable
ï¿½ Atari XMM801 Printer with manual and AtariWriter software (unit has built in power adapter)
ï¿½ Atari SX212 Modem with power adapter
. Atari 800
. Atari 810 Disk drive
. Power adapter for an Atari 1050 drive
. A few cartridge games (I will have to check what is left)

Please let me know what you are offering for the equipment, and where you are located so that I may give you a
rough idea of shipping charges.

Actually you can 'mirror' the player 2 or 4 times, but you still must draw it one scan line at a wime by writing to that players register on the scan line to want that part of the player to appear on.

Ok, this has been brought up before, but I think now is the time to act.
We need someone to purchase all the rights to the 8-bit from Atari. I
would be willing to donate to this cause, as I'm sure others would. What
does everyone think?

(One thing I would like to see would be an 8-bit emulator on a card, like
the 3DO blaster from Creative Labs!!)

Note that this is the ORIC C-compiler found at
http://www.dcs.ed.ac.uk/~axc/FLOOR1/oric.html#compiler
(this is derived from lcc) and _not_ the ATARI cc65 from umich.edu.
(Just the executable names coincide).
(See also <4j6952$4pc@dodo.cosy.sbg.ac.at>. Well,
the code I produced for the example is not really correct as Andre pointed
out, but it can easily be corrected :-).
Basically, lcc did a completely unnecessary integer promotion of *p (in
my opinion unnecessary).
I don't know if gcc would make better code, but I could well imagine
it.
The 6502 has simply too few native registers to get along with IMHO.
How would you teach gcc to add 32 bit numbers with only an 8bit accu?

Greetings,
-Gerhard

:
Well, the compiler produces pure 6502 assembly and I see no reason why
you shouldn't be able to make your favourite cross assembler assemble it
for your C64. The libraries are another thing... You would probably have to
develop your own one.
There are Linux binaries available, but those are for _intel_ and not
Amiga Linux. (see http://www.dcs.ed.ac.uk/~axc/FLOOR1/oric-dnl.html).
Don't know if the developers give the sources away.

Greetings,
-Gerhard

1739. SVGA for Atari 8 bit?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-28 00:00:00 UTC
From: glennb <glennb@interport.net>
Message-ID: <315AF87D.4B06@interport.net>
Source record: 85053

Hi,

I was wondering if there is any way to hook up an Atari 800, XL, or 130XE
to my IBM compatible SVGA monitor? At the very leas I assume that a
cable would need to be made/bought but what else to make this possible.

Any info would be appreciated.

Thanks,
GlennB

1740. Need file conversion ulitlity HFM to AtariDos

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-28 00:00:00 UTC
From: wcm1@cornell.edu
Message-ID: <wcm1-2803961305370001@128.84.239.134>
Source record: 85054

Does anyone have a proven, workable utility to convert Atari's
proprietary Home Filing Manager database files into generic ascii, tab
delimited atari Dos files which can be opened and edited by FILEREAD.BAS
and/or ATARIWRITER, and then modemed to other platforms? If so I'd like to
either buy a 5.25" diskette of same readable by an atari 1050 disk drive
or arrange for an online transfer of the utility file. My year and a half
long project to transfer my 8-biy stuff to Mac is nearly complete thanks
to help from people on this newsgroup... Only 4 large HFM files to go!!
Bill Mutch

I can't believe that JACG is still around.
I never belonged to it, although I did attend one meeting about when
the ST came out. Instead, I was a member of the long defunct ACENNJ.

Hello Fellow 8 bit Devotee's

I have for sale the following Atari 8 bit machines (I have too many ..
they seem to sprout up around here like mushrooms!):

Atari 600xl - 64K - Super Video 2.1 mod (looks best when using monitor)
Atari 800 (standard 48k model)

Will ship in the Continental U.S. for $45 for either unit.

Bill

Hello Fellow 8 bit Devotee's

I have for sale the following Atari 8 bit machines (I have too many ..
they seem to sprout up around here like mushrooms!):

Atari 600xl - 64K - Super Video 2.1 mod (looks best when using monitor)
Atari 800 (standard 48k model)

Will ship in the Continental U.S. for $45 for either unit.

Bill

:
:I really can't believe that someone would stoop so low as to swindle,
:rip-off,or cheat a thrift store...a store whose fundamental principle to
:is to aid those in need.

I don't agree with the practice of stealing from a thrift store - it's their stuff until you pay them what they're willing to let it go for - but you've got a tremendously misguided view of what thrift stores are there for. The majority of thrift stores you'll find are *not* charities put there to sell to people in need. They have about as much charitable intent as one of the jewelry stores in your local shopping mall.

Sure a lot of them may *say* "Vietnam Veterans' Thrift Store", but if you take the time to find out how much goes to the Vietnam Vets, as much as 1% (that's one percent) of the profits go to the Vets so the thrift store owner (who usually runs several) can use the name. Some of the other thrifts *are* charities, but with name licensing like this it's difficult to tell. :)

And while we're at it, check out the prices on some of the stuff in your local thrift. Especially if it's a potential collectible (*anything* that says "Star Wars" is a likely candidate in my area) - I saw a poster straight out of a Suncoast marked at $100. And my personal favorite, old PC-XT's. Usually these are priced at the bargain nasement price of $100-$200, untested and without keyboard or monitor. Selling to the needy indeed. :)

: If a cartridge or system is above what you feel
:you should pay then leave it there or consider the extra cost a donation
:to the cause.

... the cause of lining the thrift store owner's pockets.

(I will reiterate, I am NOT advocating stealing from a thrift store - just bringing a dose of reality into this thread...)

1787. MIDI software for MIDImate3

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-29 00:00:00 UTC
From: kwalk@cris.com
Message-ID: <4jfgk1$df9@tribune.concentric.net>
Source record: 84968

I am helping out a friend who has a MIDImate3. It appears that the software uses a custom file format and there is no way he can load and play standard MIDI format files. Does anyone know of a software package he can get that will load and play standard MIDI format files using the MIDImate3? Being able to record and save files in standard format would be a real plus.

Thanks in advance for any leads.

I really do not think that you should be making such a negative blanket staement about thrift stores....you base your statements on the exceptions not on the general cases. You surely cannot claim that Church based Thrifts like the Salvation Army or some of the other large chains are out to line their pockets....because it simply is not true. Not only do they make a monetary contribution to the needy, they also provide social assistance through many types of programs.

Sure, there is the occasional underhanded businessman, but they are the exception not the general case. And even in that case, thereis still a percentage which goes towards helping the needy and you steal that no matter how little you take.

I have seen another type of store that I thought was a thrift store...but when I looked around I saw a sign that said "we are not a thrift store...we buy from thrift stores and indirectly if you buy from us, you will be supporting thrifts" I thought that was pretty sly...they have a significant markup on many items especially when something is actually valuable.....

Finally, whether it be a thrift store or any other store....price swithcing and stealing can get you into a world of trouble if you get caught...

1793. Pinouts needed

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-29 00:00:00 UTC
From: gsutton@kendaco.telebyte.com
Message-ID: <4jfu6t$pvg@news.telebyte.net>
Source record: 84974

Can anyone tell me the pinouts for the Atari serial port? I have this old Okimate 10 printer that I would like to use on my CoCo2 and Apple IIGS, but I need to make custom cables for it. I called Okidata, and they were unable to help. The OkiMate-10 was designed for Ataris and Commodores, and the ports on the printer look like fat Atari Joystick ports. They're 13 pin connections.

Thanx in advance

Otter

From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <hVLId9R.lmcclure@delphi.com>
Source record: 84975

In a message dated 3-24-96, Jim Mirous said:
|
| "I just added a 1200XL to my collection and
| it displays only black and white? It is connected
| to a Commodore monitor with luma and chroma inputs.
| Works fine with my 800, is the video different for
| the 1200xl?"
|
|
Without modification, the 1200XL lacks a chroma output, so if you used exactly the same plugs as you did with the 800, you have a dead input going into the chroma input, resulting in the monochrome video you see.
-
You can substitute the 1200XL's composite output for chroma, which while better than using straight composite alone, will be sorely lacking compared to the strong chroma/luma output of the original 800 (speaking from the experience of a 1200XL owner who had an old 800 once).
-
The long term solution is to modify the 1200XL to provide a true chroma output, preferably the Supervideo 2.1 modification detailed in the December 1993 issue of "Atari Classics".

Wow! I hoped that somebody already dug into this a little.
Would you mind making your work available so that I can try it
out? I am surprised that it works at all without a virtual
machine abstraction!

> But the biggest choice of all is whether to let GCC manage the 6502
>registers directly, or to use a sort of ``virtual machine'' model on
>the 6502 that looks better to GCC (page zero registers, manipulated by
>simple bits of native code that GCC thinks are single instructions).

Exactly such sort of thing I thought of. The code could be
implemented as macros and as subroutines for the more complex things
like multiplicatio, division, floating point ops etc. (or we use
pseudo ops triggered by a brk...)

Have a nice weekend!

Greetings,
-Gerhard

From the Atari 8-Bit Computers FAQ I find:

2 4 6 8 10 12
1 3 5 7 9 11 13

1. Clock Input 8. Motor Control
2. Clock Output 9. Proceed
3. Data Input 10. +5V/Ready
4. Ground 11. Audio Input
5. Data Output 12. +12V (400, 800 only. 1400XL/1450XLD?)
6. Ground 13. Interrupt
7. Command

This is the Serial (SIO) Port for all Atari 8-Bits.

Hope this helps.

Uncle Fester

What I always wanted to know was: Can you cycle count a dli to trigger
the smooth scrolling register in the middle of a scan line? (In theory,
that should enable side by side smooth scrolling maps with no pixel border
between them. But I don't know if the hardware is so tied up drawing
the scan line as to not be available for an update. I thought it might
be possible since you can change the hardware color registers and get
a (flickering) color change midway on the scan.)

Just curious,
Ron

I have the full M.R. and what I beleive to be a test version. I don't recall if the test version said 'Preliminary Monty' or not. I do know that the test version finished by sliding down a pole at the bottom of the maze levels to the opening screen. (Which had two poles on it and Monty fell at an angle to one and then slid down to the first screen.) I haven't tried it with PC Xformer yet. If anyone is interested, I can try to find them and move them to my PC where I can send them. (my server currently does not have 'warez' access although I have put in a request for it.) If anyone has any problems with me posting it, let me know. I don't want to cause any grief, but I don't beleive I'm stepping on any toes by posting it. If I do manage to get it posted properly, I will try to post it at the Atari8bit warez group. (If I ever get access! ;-))

What I do is make copies of XFD files with new names on the PC, then use those copies wiith Xformer and format them and write DOS files from a MYDOS menu. Then it's a matter of starting Xformer with the newly formatted "disk" and as many as 7 other files (since MYDOS supports 8 drives), and then copying them one at a time onto the disk with the C option in the MYDOS menu. If you need to use a disk with no MYDOS on it, you start Xformer with a MYDOS disk as drive 1, a newly formatted XFD disk as drive 2, then up to 6 files as drives 3 through 8. Then do the copy thing using the MYDOS menu. I know there should be an easier way, but this way works.

In article <4je9c0$idd@esel.cosy.sbg.ac.at>,
Gerhard Wesp <gwesp@cosy.sbg.ac.at> wrote:
>Here goes the complete example:
>Let test.c be:
>
>char *p;
>foo()
>{
> while(*p);
>}
>

Just for completeness, here's what you get if you use CC65 (the Atari C
compiler) on this example code:

```
------------------
_p:
.blkb 2
_foo:
jsr enterfun
L2:
lda _p
ldx _p+1
jsr ldai
jsr tstax
lbeq L3
jmp L2
L3:
jmp exitfun
.globl _foo
.globl _p
------------------
```

Note the two subroutine calls required for each bit test. This might be
the lesser of two evils in a 6502 C compiler. Gerhard had reported on
the results using the "Oric" compiler (I never heard of that one
before) which has other problems:

```
>_foo
>Ltest1
>Ltest2
> ldx _p
> lda _p+1
> stx tmp
> sta tmp+1
```

```
> ldy #0
> lda (tmp),y
> sta tmp0
>
> lda #0
> ldx tmp0
> stx tmp0
> bpl *+4
> lda #$FF
> sta tmp0+1
>
> lda tmp0
> ora tmp0+1
> beq *+5
> jmp Ltest1
>
> rts
>
>_p
> RESERVE 2
>
>
>Note that this is the ORIC C-compiler found at
>http://www.dcs.ed.ac.uk/~axc/FLOOR1/oric.html#compiler
>(this is derived from lcc) and _not_ the ATARI cc65 from umich.edu.
>(Just the executable names coincide).
```

Hello Fellow 8 bit Devotee's

I have for sale the following Atari 8 bit machines (I have too many ..
they seem to sprout up around here like mushrooms!):

Atari 600xl - 64K - Super Video 2.1 mod (looks best when using monitor)
Atari 800 (standard 48k model)

Will ship in the Continental U.S. for $45 for either unit.

Bill

Well folks, I'm hoping you all can help me out with a few questions. I just bought an Atari 800XL, a 1050 disk drive, and a lot of software today at a second hand store. Now this is my first Atari home computer and I know just about nothing about it really. One thing I do know though is that it needs a power supply and it doesn't have one. So with regard to that, is it possible to use, or rewire so as to make useable, a C-64 power supply with an Atari 800XL computer? Is there a place on the net that has technical info regarding the pin out of the 800 XL's power supply connector and ports? This would be would be especially helpful because the computer also did not come with a cable to connect it to the disk drive.

Regarding the disk drive, I have a feeling that it has been modified. It has an aftermarket green LED mounted on the front which is wired to a toggle switch at the rear. The toggle switch is also wired to test points T13 and T15. Anybody know what flipping the toggle switch does? Thanks for any replies.

>
>
Just what in the world are you talking about? Are you replying to my message
that the Xformer is crap? Can't tell because you didn't quote anybody. In
any case, when I pay for something I expect it to perform as advertised, not
like some half assed piece of shareware. I PAID for that program, when it
turns out it's not even worth pirating. I don't recall anyone saying it was
easy to write an emulator, but then again, I don't remember any of the authors
of the other emulators whining on about their efforts and how it's not
possible with the current hardware or some other nonsense. Programming
emulators isn't my thing, but then again I never claimed I could do it, nor do
I sell a piece of garbage to the public either.

NO! Noooooooo! NOT THAT!!!! Not the DREADED "AOLamer" curse! Pullllleeeeese!
Anything but that! Even the Chinese torture treatment would be preferrable!

Mea Culpa, Mea Culpa, Mea Maxima Culpa! I'M SORRY!!! I APOLOGIZE!
(do I have to repeat this 54 times??)

Let me Explain what happened, after it was brought to my attention that this
happened.

I was TRYING to post this msg. last night from NetScapes Newsgroup reader.
I hit the "send" button, but I would get a msg. "sent 81 bytes - stalled" ...
and there it would sit .. just hang there. So I hit "stop", then I would
try to hit "send" again. I'd get the same msg., although, sometimes it would
say "sent 162 bytes - stalled". Finally, after many tries (I don't give up
easily), I DID give up, and figured that there was something wrong with my
newsgroup server, and that I'd just post the msg in the morning (now). Well,
when I logged on this morning, I got a msg from one of the group, and became
aware of the situation. I apologized to him, and told him that I'd also post
an apology to the newsgroup ... thus, this msg.

Once again, I'm sorry for the "dupes". I was totally unaware that this had
happened.

Bill .... no AOLamer ... EVER!

Source record: 84861

Hi All,

Just in case you didn't catch my other "apology posting", I'll do it
again, so that everyone sees it.

I had NO IDEA that the NetScape Newsgroup Reader was duping the msg.
I kept getting a msg. from Netscape saying: "sent 81 bytes - stalled"
Then, it would "hang". I figured I'd try to "clear" it by hitting
"stop", then "send" again. I'd get the same "stalled" msg. from
Netscape. I figured that I never posted the msg. at all, until
someone from the list pointed out to me in my email this morning that
it had duped so many times on the list.

All I can say is: I'm SORRY! I APOLOGIZE!
I had no idea that NetScape's newsgroup reader behaved in this fashion.
I will be more careful when making a post in the future.

Bill
(8yr Internet user ... and NOT an AOLamer)

I just bought a 130EX with XF551 drive. My previous setup was an 800XL with a cassette player/recorder 8 years ago, so I don't know anything about Atari drives and DOS. I just used the 800 XL to play games, nothing else. Do I need DOS to use the drive? I tried using some of the disks that came with 130 to boot DOS, but that didn't work. I also tried loading Zork I, which I understand doesn't require DOS, and the computer hangs after a few secs of beeping. Is there any way to test the disk drive, and where could I get/buy Atari DOS and some games? Thanks.

If it has a disk drive and printer, it ain't no 2600! The 2600 was
strictly a video game machine. What your friend has is probably either an
800, 800XL, 1200XL, 400, or 600XL. The whole system is probably not worth
more than $100 unless it has an MIO or Black Box interface, or a disk
drive made by someone other than Atari, or upgraded with a Happy or US
Doubler chip. Software might increase the value, if you have the
original disks or cartridges with manuals.

: know just about nothing about it really. One thing I do know though is
: that it needs a power supply and it doesn't have one. So with regard to
: that, is it possible to use, or rewire so as to make useable, a C-64
: power supply with an Atari 800XL computer?

I don't know the power requirements of a C-64 but your 800XL needs 5VDC
at between 1 and 1.5 Amps. The pinout of the power connector looking at
the computer is:

```
/ o o \
Gnd return - o o - +5 VDC
\ o o /
o
/
Gnd
```

: Is there a place on the net that has technical info regarding the pin
: out of the 800 XL's power supply connector and ports? This would be
: especially helpful because the computer also did not come with
: a cable to connect it to the disk drive.

There are several sites on the web that carry Atari 8-bit info. You
could probably find a file that shows pinouts. One might be:

gopher://gopher.archive.merit.edu:7055/11/atari/8bit

An SIO cable to connect your computer to the 1050 may be found from
someone on this group or from a vendor. Try B & C ComputerVisions at
408-986-9960, American Techna-Vision at 510-352-3787, or Best Electronics
at 408-243-6950.

: Regarding the disk drive, I have a feeling that it has been modified. It
: has an aftermarket green LED mounted on the front which is wired to a
: toggle switch at the rear. The toggle switch is also wired to test points
: T13 and T15. Anybody know what flipping the toggle switch does? Thanks
: for any replies.

An Atari 1050 disk drive requires 9VAC for power. The original supply is
rated at 31VA (about 3.4 Amps). The vendors listed above or a reader on
this group might sell power supplies for the computer and drive.

I'm not familiar with the modification you described. On the 1050 circuit
board TP13 is +5VDC, and TP15 is ground.

Steve

>
> Exactly such sort of thing I thought of. The code could be
>implemented as macros and as subroutines for the more complex things
>like multiplicatio, division, floating point ops etc. (or we use
>pseudo ops triggered by a brk...)

The biggest problem with this is interfacing to the optimizer. Suppose
we design macros that do the instructions for our 32 bit machine with
8 32bit (zero page starting at $80) pseudoregisters. Let's run through
a two instruction example.

```
register int r0 = (unsigned short)mem1 & (int)mem2;
```

In our macro language, gcc might compile that as

```
ldsz _mem1,%r0
andl %r0,_mem2,%r0
```

Our macros are

```
ldsz _mem1,%r0 defined as
LDX #1
LDY #0
0: LDA _mem1,X
STA $80,X
STY $82,X
DEX
BPL 0b
```

```
andl %r0,_mem2,%r0 defined as
LDX #3
0: LDA _mem2,X
AND $80,X
STA $80,X
DEX
BPL 0b
```

Since gcc wouldn't know anything about the internal structure of the macros,
it would just concatanate the two instruction macros. Whereas a native 65C02

C compiler outputting real 65C02 instructions could notice that the LDX #3 could be changed to a LDX #1 and optimize the instruction sequence. An even better optimization would be to combine the two into one loop like this:

```
LDX #1
LDY #0
0: LDA _mem1,X
AND _mem2,X
STA $80,X
STY $82,X
DEX
BPL 0b
```

That's a reduction from 32 to 14 cycles (incorrectly assuming 1/instruction) in execution time and a reduction in size from 26 to 17 bytes in size. On a 6502 both of those are important things. (64K address space, 1-2 Mhz)

A native 6502 compiler could do that kind of optimization, our "macro" compiler couldn't without an additional optimizer. My guess is that the optimizer would be as hard to write as a native 6502 C compiler.

IMHO, the answer is "Yes, it would be possible to alter gcc to output a pseudocode that could be compiled to 6502 instructions, but it would be hard to optimize the resulting code."

You may need to make a slight modification (one wire) to get the
chroma line out, but whatever instructions I may have had on doing it
are long gone. There's also the SuperVideo upgrade, printed in Atari
Classics as I recall.

1848. Marble Madness & Gunslinger

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-31 00:00:00 UTC
From: Lawrence Staveley <Lawrence@kwll.demon.co.uk>
Message-ID: <516216820wnr@kwll.demon.co.uk>
Source record: 84873

Does Marble Madness exist for the Atari 8-bit? I loved this game in the arcades, and over here in the UK it came out for virtually every other machine except the Atari. Anyone out there ever see it?

Also, how many sides was the adventure game "Gunslinger" on. I don't know if I've got them all (5), and I am not going to start playing it if I haven't. Actually, I may not start playing it even if I have, it's just that I've always wondered about that last disk......

"I can't see the solution - Through this state of confusion....."

Lawrence@kwll.demon.co.uk

1849. Help with 1050 drives needed!

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-31 00:00:00 UTC
From: Lawrence Staveley <Lawrence@kwll.demon.co.uk>
Message-ID: <808339369wnr@kwll.demon.co.uk>
Source record: 84874

Can anyone suggest anything.

I have three (yes, three!) 1050 drives all with the same problem.

They all power up and make the drive spin. Two of them are 'Happy' and pass the power-on diagnostic (ie, the light doesn't flash). You put a disk in and it spins properly. You connect it to an Atari and: NOTHING!

I know it's not the Atari as it has two drives connected that work fine, and it's not a promlem with the id select either. I've also swapped the chipsets between the three to check for a dodgy chip, but, alas, nothing. It must be something simple for all three to be the same, maybe a capacitor or something?

Any help is appreciated, even a place in the UK where I can get them fixed would help!

Unrelated disk type question: Where (in the UK) can I get a cable to connect a SCSI hard drive interface to an Atari ST? I've got an interface board with the same port on the back as the Atari has, I just need to bridge the gap between this and the Atari! I get the feeling buying a GEMulator would be easier than finding this cable!

"I can't see the solution - Through this state of confusion....."

Oh, come on. As soon as somebody tries to use the excuse that you need
to be able to write a better piece of software than what you're
criticizing you know it's silly. I just don't see Roger Ebert
replacing Kevin Costner and I'm sure he doesn't always give thumbs up
to him movies thinking "Hmmm...I couldn't do that any better". His was
a silly reply to start with.

Atari-8 : *-DOWN-* : 96-03-10
ProNode 102

UNDERDOG BBS is down, due to the recent marriage of the Sysop and the
relocation of the computer equipment from Framingham, Massachussetts to
Ashland, Massachusetts, USA. The Sysop has declared a six month moratorium
on all BBS operations while he settles in with his new bride (this moratorium
has a couple of months to go still). He said that at the end of this
period he would decide whether to bring the BBS back up or leave it down.
(Most BBSes do not survive a marriage. Still, Sysop*Underdog has been very
determined in the past, so there is no telling for sure....)

I don't think there was ever a port of this for any of Atari's gaming or computer platforms. I've never *seen* one, anyway....I could be wrong.

The best home conversion of this I've seen so far is the NES version. Very well done. I think there's a version for the Amiga, as well...

Message-ID: <4jmrmi$87j@gateway.ecn.com>
Source record: 84880

jlendino@panix.com James R. Lendino was saying:

> Does anyone find the soundtracks for games like Ultima III as
> incredibly kick ass as I do? I thought that was phenomenal. A

Yes! I loved the soundtrack to Ultima III on the 8-bit. And of course, the game wasn't too shabby either! <grin>

And Gyrus was impressive as well. In fact, there were quite a few good game soundtracks on the Atari 8-bits. And even though I use a Falcon now, I still have my 800XL and Percom drive, and more software than I know what to do with. I used to have a 130XE and quite a bit more hardware too, but that's all gone.

But as far as the music goes, there was just something about the 8-bit 4-part harmony that sounded really cool. And the guy who did the music for Exodus: Ultima III (Kenneth Arnold???) sure knew how to take advantage of it!

There was another program (AMS?) that played really great tunes as well. I had several disks of songs too.

So you aren't the only one who enjoyed the tunes!

By flipping a disk onto the other side and cutting a notch in the sleeve
corresponding to the write protect notch, you can read/write the other
side of a disk.

Possibly, the toggle allows read/write on a double sided disk without
having to notch the other side of the disk.

Hope this helps.

Chet

Yes, you are wrong. Marble Madness was released for the Atari
ST. It was a "tolerable" port, but it was released.

>did they come from?

I didn't even know there was a snowfite2. Do they both
lock up on you after a while (as Snowfite seems to have done
for everyone I've talked to)?

Oscar

1868. Re: Help with 1050 drives needed!

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-01 00:00:00 UTC
From: rbmier@winternet.com
Message-ID: <4jpk6f$4jm@blackice.winternet.com>

You've been plugging and unplugging the SIO cable with the
1050 power pack plugged in, right? That's a no-no. Most of the time it's
Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C.
at the right, rear of the main board. A 14 pin DIL chip. Actually it is an
array of 5 transistors.
U-1 is used for the SIO interface drivers and receivers so your
Happy diagnostics can't test the curcuitry.
I won't even try to explain how the transformer causes the failure,
just believe me, it does. The 810 was even worst but at least on them it was
in a socket at the rear of the side board, very easy to get at and change.

Hope this helps; Rich Mier

1870. Atari 800/XL/XE cartridge collector's: PLEASE READ

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-01 00:00:00 UTC
From: krieg@earth.execpc.com
Message-ID: <4jpnc4$jv2@earth.alpha.net>
Source record: 84708

I have been working on a definitive checklist for collector's such as we. There are several different lists floating around out there, all of them apparently based on Kevin Chase's original list. I have been collecting data from these, and other collector's. I hope that we can come up with one all-encompassing list.

Please check over this list and e-mail me any updates you have. No amount of data is too small!

Also, I have based the rarity ratings on my experiences with collecting, vendor catalogs and "For Sale" lists here on the 'net. I would appreciate your comments on these. Let me know if I'm way off base on any of these (I could very well be).

I look forward to hearing from many of you!

Cartridges for the Classic Atari 400/800/XL/XE computers

Preliminary release (0.9).

NR = Never Released
?xx = year not known for certain
kbo = keyboard overlay
<none>= no catalog # on cartridge or manual, box may have had a # on it

1871. Re: 1200XL

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-01 00:00:00 UTC
From: jim.mirous@prostar.com
Message-ID: <00000F1000000691@prostar.com>
Source record: 84709

Thanks for the reply on the 1200xl. I appreciate it. Jim.

1872. 1010 Power Supply?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-01 00:00:00 UTC
From: gsutton@kendaco.telebyte.com
Message-ID: <4jq4ko$77o@kendaco.telebyte.com>
Source record: 84710

We were just recently given an Atari 1200XL with a bunch of games and other stuff, all free. However, the 1010 Tape Drive doesn't have a power supply.
Can anyone tell us what the voltage and amperage for the 1010 is so we have an idea of what to look for, and also whether it is AC or DC?

Thanx

Otter

The value of the diode should not matter, since it is just a steering diode.
You have probably put it in backwards. Doublecheck it.

>Also, I have a 1050 that powers up, but when you connect it to the
>800, it reads one sector after about 10 seconds, and then makes the

Sounds like either drive speed is wrong, or more likely the head is out of
alignment. Also, check the felt pad that presses the disk to the head. If it
is worn, try rubbing it lightly to fluff it up.

I'd like to pick up around 10 Atari Portfolios -- if I can find them
cheap.

If you know of a source, please let me know.

Thanks.

"One person can make a difference, but most of the time they probably
shouldn't" -- Marge Simpson

Message-ID: <Dp5qtE.8ys@iglou.com>
Source record: 84895

I've seen a bootleg version of Marble Madness. It wasn't called that, and your character didn't look like a marble, but the maze was just like the arcade game. It usually crashed after a few minutes of playing.

:
This is a tough example indeed. I don't know how to avoid such things
except by having a good optimizer brush up the assembly code _after_
the macro expansion has taken place. But, as you write, such an optimizer
would be quite a lot of hard work to write.

Well, the manual says that gcc is a 32 bit compiler... Perhaps it would
really be better to try to make a ``true'' 6502 compiler (i.e. one which
knows everything about the internals of the processor)? However, the
ATARI cc65 results are a bit disappointing...

Greetings,
-Gerhard

I just can't believe that people would brag about stealing a cartridge.
I hope they realize that they are breaking the law and that they are no
better than many criminals in jail....of course if they were
caught...they too could be chained to the side of the highway picking up
trash....and I doubt they will find any video games there. In this free
market society...anyone has a right to charge whatevr they want for
something and if you do not want to pay the price...then do not buy
it...either you will be right and no one will buy it and the price may
come down..or you will be wrong and someone else will buy it...and you
will be kicking yourself...but do not steal.

Welcome to:

THE UNOFFICIAL ATARI 8-BIT NEW USER, EMULATOR HELP FAQ

Revision 1.0c, January 17, 1996

By Bill Kendrick

------------------------------------------------------------------

For general help (hardware, magazines, etc.) please check the Official
Atari 8-bit FAQ file:
Atari 8-bit FAQ
(http://www.smartpages.com/faqs/atari-8-bit/faq/faq.html)
You can also ask the FAQ keeper, Michael Current, for a copy at:
mcurrent@carleton.edu

If you want the latest copy of this FAQ:
Unofficial Atari 8-bit New User and Emulator Help FAQ
(http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html)
You can also ask me, the FAQ keeper, Bill Kendrick, for a copy at:
kendrick@zippy.sonoma.edu
------------------------------------------------------------------

Recent Changes:

* Since v.1.0b (Jan.4, 1996): Fixed some MAILTO: links.
* Since v.1.0a (Dec.15, 1995): Added info. (finally!) on how to
contact authors of all of the emulators.
* Since v.1.0 (Nov.30, 1995): Added more information about APE.

Summary of Atari 8-bit's and emulated 8-bit Atari's:

* Real Ataris: Atari 8-bit computers were produced between 1979 and
1987. The major models released were the:
+ 400 - 8K-16K, 400/800 OS, CTIA or GTIA graphics (depends when
made)
+ 800 - 8K-16K-48K, 400/800 OS, CTIA or GTIA graphics (depends
when made)
+ 1200XL - 64K, 1200XL OS, GTIA graphics
+ 600XL - 16K, XL OS, GTIA graphics
+ 800XL - 64K, XL OS, GTIA graphics
+ 65XE - 64K, XL OS, GTIA graphics
+ 130XE - 128K, XL OS, GTIA graphics
+ XEGS (Game System) - 64K, XEGS OS, GTIA graphics (Had Missile
Command)
All of the XL's except the 1200XL had BASIC installed on ROM. BASIC
```

can be purchased on cartridge for the 400, 800 and 1200XL.
* Emulated Ataris:
+ On IBM PCs/compatibles:
o PC Xformer 2.x. Limited Public Domain demo.
o PC Xformer 3.0x. Powerful Commercial version.
+ On Apple Macintoshes:
o Rainbow. Limited Public Domain demo.
o Rainbow. Powerful Registered Shareware version.
+ On Atari STs, TTs, and Falcons:
o ST Xformer 2.x. Limited Public Domain (previously
commercial).
+ On UNIX and X Window: (including PC and Amiga)
o Atari 800 Powerful Public Domain version.

Capabilities of an Atari 8-bit:

GRAPHICS:
* The Atari has maximum resolution of 320 x 192 (standard,
non-overscanned screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2,
160 x 96 x 4, 160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4
graphics are also supported. 40 x 24 x 256-character (128 normal,
128 inverse, character set indirection available) text mode is
standard (2 colors).
* 40 x 24 x 128-multi-colored-character (4 colors per character
allowed, the other 128 characters have 4th changed into a color 5)
and 40 x 12 x 128-multi-colored-character screen modes are
available.
* GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16
hue-only, and 80 x 192 x 9 color screen modes.
* Normal (bordered), narrow (underscanned), and wide (overscanned)
screen modes are available.
* Screen modes can be mixed (by lines) down the screen using the
Display List (a program which is executed by the ANTIC graphics
chip every screen refresh (60 times per second on real NTSC
Ataris).
* Fine scrolling (both vertical and horizontal) can be enabled on
any line on the screen.
* All other screen attributes (color, player/missile horizontal
position, screen width, player/missile/playfield priority, etc.)
can be ajusted at any point down the screen via a "Display List
Interrupt."
* Four 8-bit wide, 128 or 256 byte high single color players, and
four 2-bit wide, 128 or 256 byte high single color missiles are
available. A mode to combine the 4 missiles into a 5th 8-bit wide
player is also available, as is a mode to XOR colors or blacken
out colors when players overlap (good for making three colors out
of two players!) Players and missiles have adjustable priority and
collision detection (which is not supported by the PC Xformer 2.0
and 2.5 and ST Xformer programs).

SOUND:
* Four voices of 8-bit pitch-resolution (3.5 octaves), 4-bit volume-resolution, and 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.
* A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was rerouted through the normal audio output, and the keyclick can be disabled.
* Some hardware stereo upgrades (like "Gumby") exist which double the number of voices.

Objective of this file:

At the time of its release (mid 1994), much discussion went on in the comp.sys.atari.8bit Usenet newsgroup about the Atari 8bit emulator for IBM / MSDOS based computers, PC Xformer 2.0 (XF2 for short). Many people in the 8-bit community had gotten fed up with the XF2-based questions which did not pertain to them, or to the very simple questions which came up time and again which bothered regular readers / digest subscribers.

This file was created to reduce the number of 'newbie' and XF2 questions. Now it's becoming a fairly good reference (and got me the job of writing the commerical 3.0 release's documents!).

This FAQ will present answers to simple questions like "how do I turn off BASIC" (a good answer to that of course is, READ THE FRIGGIN' MANUAL) and "how do I get a disk directory?"

It will also direct people who are unaware of the large amount of Atari 8-bit support (NOT NECESSARILY EMULATOR SUPPORT) and perhaps become a supplement to the many official and unofficial files floating around the net (like the official FAQ, the Vendor/Developer List, the Who's Who list, etc.).

-- QUESTIONS AND ANSWERS: --

1. What does "READY" mean?

This is the Atari BASIC prompt. See below for hints on Atari BASIC.
2. Why doesn't this program load?

The program may not work under the Atari 800 Operating System, it may require the XL/XE Operating System. Be sure you're in 800XL or 130XE mode. (Note: Not all (versions) of emulators support XL/XE modes!)

It may not work under the XL/XE Operating System (rare cases), switch to 800 mode.

Be sure you turned BASIC off before trying to load it if it cannot run with BASIC on.

It might be a BASIC program! Be sure you're in BASIC and use the BASIC "RUN" or "LOAD" (and then "RUN") command. Also, be sure it works with the BASIC you have. Some programs only run in BASIC XL or XE (which are both cartridge-based BASIC's not easily available to an emulator), and some run with TurboBASIC XL (disk-based).

It may just refuse to run on the emulator.
3. How do I turn off BASIC?

To toggle BASIC on and off in PC Xformer, press [SHIFT]-[F10].

To toggle BASIC on and off in Rainbow, ???.

To toggle BASIC on and off in Atari800, ???.

To toggle BASIC on and off in ST Xformer, ???.
4. Why doesn't this game/program run correctly?

It may use player/missle collision detection which is not supported on some versions of emulators.

See "Why doesn't this program load?", above.
5. How do I exit the emulator?

To exit PC Xformer, press [F5]. Note: this does NOT temporarily 'shell' or 'jump' to MSDOS.

To exit Rainbow, press [Apple]-[Q] or select "Exit" from the "Apple Menu".

To exit Atari 800, ??? or close the window (in X Window).

To exit ST Xformer, ???.
6. How do I get to Atari DOS?

In BASIC, type "DOS" at the "READY" prompt.

Reboot without BASIC on.

Be sure you have a DOS-bootable disk image installed in drive 1 ("D1:").
7. How do I use files which are not in disk images with an emulator?

To "install" files as though there were plain disks with PC Xformer, simply add the files to the command line and use them as their respective drives (be sure the first drive is a DOS-bootable disk image).
Example: XFORMER MYDOS45.ATR filename.ext

To use a file from your Mac in Rainbow, make sure the disk image in drive 1 has enough space for the file, and select ???. The file will be added to that disk image.

To use Unix files in Atari800, use the H drive. ???.

Use the MSDOS program S2PC which allows you to access files within a MyDOS/compatible .ATR disk image. S2PC let's you read, write, delete, change directory, and view the directory of a MyDOS/compatible .ATR disk image. It can be used via command-line parameters from MSDOS, or as a menu.

Use the MSDOS program ATARIMG, which is much like S2PC but has a nicer, more graphical (less-menu driven) interface.
(Unfortunately, this doesn't run on all IBM's!)

Use the Mac program Virtual Disk Editor ???.
8. Just what ARE .ATR and .XFD files?

Refer to the XFormer and SIO2PC manuals for details on these files.

Simply put, they are Atari disks, stored as files which are as big as the disk they represent (an 88k disk image will use 88k on the IBM). .ATR files are used by SIO2PC and APE (see below) as well as most Atari emulators. .XFD files are used by ST Xformer and PC Xformer.
9. What are SIO2PC and APE?

Refer to the SIO2PC manuals for details on this program.

Refer to the APE manual and SIO2PC hardware manual for details on this program.

These are a programs which run on IBM/compatibles under MSDOS. (APE also runs fine under "dosemu" for IBM/compatibles running Linux). With the use of of a simple (and relatively inexpensive) cable, the software makes the IBM act as though it were a number of Atari peripherals. SIO2PC emulates up to four disk drives (any drive ID numbers from 1 to 8 are allowed) and a printer. APE emulators up to eight disk drives, a printer, and a modem (RS232). They use disk image files (.ATR's) and can also let the Atari access plain IBM files. SIO2PC does this much like PC XFormer does, making the single file its own disk. APE allows you to navigate your PC's drives through an Atari drive. The printer emulation of these programs redirect Atari "P:" writes to the PC's printer. SIO2PC can also direct the output to the screen or to a plain IBM file. Different text translations/conversions are available. (APE also allows keyboard macros, command key redefinition, the ability to save the current drive/etc. configuration and load it later as a "block", and the ability to both emulate copy protected disks (with it's own extension of the ".ATR" format, the ".PRO" format (which will hopefully be used in future versions of Atari emulators)) and create disk images from copy protected disks (with a special cable). SIO2PC may soon have this ability as well, since the documentations say it has been planned for a while.)

-- Getting around on the Atari: DOS and OS --

Note: This section will simply discuss Atari BASIC, the Atari OS, and Atari DOS 2.5 and MyDOS 4.5x (because these topics seem the most relevant to the less-knowledged/experienced Atari 8-bit users). No emulator-specific information will be presented.
* AtariDOS and MyDOS QuickReference: MyDOS (4.50 and 4.53) presents the user with the following commands:
+ [*] Disk directory of current directory (like "dir *.*" in MSDOS)
+ [1]-[9] Disk directory of a disk drive (like "dir a:*.*" to "dir i:*.*")
+ [A] Disk directory (like "dir " and optional output destination)
+ [B] Quit to cartridge
+ [C] Copy file(s) ("[source],[destination]" copies from one place or disk to another, just "[source]" copies from one place on one disk in a drive to the same place on another disk in the same drive (asks for swapping))
+ [D] Delete file(s) (add "/N" to delete without being prompted first) (add ">*.*" or ":*.*" after a subdirectory name to delete the files within it. A subdirectory name alone will delete the subdirectory (if it is empty and unlocked)). (Acts like both "del" and "rd" in MSDOS.)
+ [E] Rename file(s) (renaming multiple files is allowed, but be careful). (like "ren [old] [new]" in MSDOS - with MyDOS, use "," between old and new masks.)
+ [F] Locks file(s) from overwrite, deletion and appending (like "attrib +r [mask]" in MSDOS.)
+ [G] Unlocks file(s) (returns them to their default state).
+ [H] Writes DOS files to a disk (this creates a disk which boots with the current version of MyDOS you are using and also has the menu file "DUP.SYS" on it as well). (This is like "sys"(?) in MSDOS.)
+ [I] Formats a disk (add "/N" after the drive number to do a quick-format of an already-formatted disk (ie, just a very fast "delete `*.*'").
+ [J] Duplicate disk (copies an entire disk, including boot sector, when using XFormer, it's much quicker to just copy one .XFD or .ATR to another).
+ [K] Make binary file: saves memory and makes it binary-loadable. See [L].
+ [L] Load binary file: loads a compiled program. (like "[filename]" in MSDOS, except any ".EXE", ".COM", ".OBJ", etc. is still required.)
+ [M] Run at address. Mainly for advanced users. Reboot is "E477", reset is "E474" (these are the hex values of the addresses where the routines to reboot and reset are.)
+ [N] MEM.SAV: when this is on, whenever you go to DOS (from BASIC, for example) it will write what is in memory to a file "MEM.SAV" so that when DUP.SYS (the menu) loads it isn't lost

forever. When you exit DUP.SYS with the "B: Run Cartridge"
command, MEM.SAV is reloaded and the environment should be as
it was when you left. It's probably quicker to simply "SAVE"
your programs (if in a language) which aren't nearly as big
as all of the memory that MEM.SAV saves.
+ [O] Options: this presents the user with some options. Mainly
for advanced users or special setups. See the MyDOS docs for
details.
+ [P] Set density. Forces a drive to be recognized at a certain
density if MyDOS can't figure it out. (??)
+ [Q] Make a subdirectory. (like "md" or "mkdir" in MSDOS).
+ [R] Set default directory. (like "cd" in MSDOS and "cwd" in
SpartaDOS) This makes "D:" now the same as a subdirectory or
other drive. ie, "D2:" will make all calls to "D:" act as
though they are to "D2:" instead. Some programs when
prompting for filenames do not add "D:" to the beginning if
one is not present, they add "D1:". If you don't trust a
program to look to "D:" instead of "D1:" and you want it to
look to some place OTHER than "D1:" (ie, where "D:" is
pointing which could be a VERY long path list), just add "D:"
to the beginning. ALSO, some programs don't even ADD "D:"'s
if they aren't in the filenames you give and may give errors
(138, for example: device not present, ie, if you said
"TESTFILE.DAT" it may think you want "T:" instead of
"D:TESTFILE.DAT").
+ [S] Set ramdisk number. This is also under [O]ptions.
+ [V] Verify writes. This is also under [O]ptions. When Verify
is on, writes will be slower but 100% reliable. With it off,
writes will be much faster but possibly not as reliable (on
bad disks, for example). Default is off.

AtariDOS presents the user with the following commands which are
identical to MyDOS's commands: A,B,C(no swaping),D,E,F,G,H, I(some
densities),J,K,L,M,N

AtariDOS 2.5 presents the user with the following commands not
present or not the same as MyDOS's commands:
+ [O] Duplicate file. This is used to copy a file from one disk
to another using only one drive. (In MyDOS, giving just a
source will make [C]opy act like DOS 2's Duplicate.)
+ [P] Format Single. In DOS 2.5, this is used to format 88k
(Single Density) disks. To format an Enhanced Density (127k)
disk, just use [I]. In DOS 2.0, [I] is the only format option
and only handles 88k. (I may be wrong, but I have never had a
Double Density drive under Atari DOS 2.0 or 2.5!)
* General DOS and OS questions:
1. How do I access the disk drives?

First, you need to have booted with a DOS. All but one DOS is
on disk (SpartaDOS X is on cartridge). When the Atari boots
up, it does some of its 'boot-up stuff' which includes

looking for a disk drive connected and turned on which is set up as drive #1. It then begins to load from the disk's "boot sector". If none exists or there's a nasty error on the disk, you get the "BOOT ERROR" notice until the error is fixed. (On SpartaDOS disks, even non-bootable disks have a boot sector, but all the boot sector is is a small program which displays a 'not a boot disk' error).

To end the digression, the answer to 'how do I access the disk drives' starts with 'you must boot the Atari with a DOS'. Check the 8-bit FAQ and the UMICH and other FTP archives for lists of DOSes available for Ataris, but the most used are Atari DOS (for compatibility with almost ALL older software), MyDOS (for an Atari DOS compatible high-end DOS), and SpartaDOS (for a very high-end DOS which looks much like MS-DOS but unfortunately cannont run all software which runs fine with Atari DOS and MyDOS.) Note: SpartaDOS does NOT run on Atari 400's and 800's (except the cartridge versions and I believe disk version 1.1). Now that you have a DOS loaded, the Atari understands the "D:" device (see below for Atari devices). Since there is more than one disk drive, you have to be able to tell them apart. The Atari uses numbers when it has more than one of the same device, so "D1:" is drive 1, "D2:" is drive 2, "D3:" is drive 3, etc.!

After the "D:" device name comes the filename. Of the most used DOSes, only MyDOS supports lowercase letters in filenames, but since most programs force uppercase entry for filenames, nobody really seems to use lowercase in their filenames.
2. How do I copy things from one place to another?

Atari DOS and MyDOS give you the "C" command in their menu interface. When it asks for a source and destination, you can use wildcards (* and ? like in most other DOSes) to copy more than one file at a time. You can also present no destination so that a file can be copied from one disk in drive 1 to another disk in drive 1, for example, and the DOS will ask you to insert each disk.
3. What are subdirectories?

Subdirectories are places where files go which are just like the normal directory of a disk, except the they happen to be WITHIN that normal directory, or even another subdirectory. For example, you can have your disk divided up into the "GAMES" files, the "GRAPHICS" files and the "SOUNDS" files. A directory of the disk (the "root" or "base" or "trunk" directory) will simply list the three subdirectories, "GAMES", "GRAPHICS" and "SOUNDS". Then, if you ask for a directory listing of the "GAMES" subdirectory, you will see the files (and perhaps other subdirectories) within the

"GAMES" directory. Think of it as a tree. For people familiar with Macintoshes, "Folders" are simply subdirectories. A window which appears when you open a "Disk" Icon is the "root", and all of the "Folders" within it have more windows in them which also have file and folder icons.

Here's a comparison to using subdirectories on different DOSes

root 'GAMES' 'SPACE' within 'GAMES'
AtariDOS D: n/a n/a
MyDOS D: D:GAMES: D:GAMES:SPACE:
SpartaDOS D: D:GAMES> D:GAMES>SPACE>
MSDOS (IBM) \ \GAMES\ \GAMES\SPACE\

Note, only Atari DOS would be using drive 1 here, all other DOSes are not necessarily using drive 1, and MyDOS and SpartaDOS may already 'be within' a subdirectory.

In MyDOS and SpartaDOS (and MSDOS), you can change the 'current' or 'default' directory to a different place (a different drive or a subdirectory). "D:" can stand for "D1:" (like AtariDOS always does) or "D2:GAMES:SPACE:"! PLEASE READ THE MYDOS OR SPARTADOS DOCUMENTS FOR DETAILS ON THIS!
4. What does "P:", "E:", "K:", etc. mean?

As stated before, the Atari has devices. "D:" is added when a bootable disk in drive 1 is read. Other exist as well:
o C: Cassette
Readable and writeable, no filenames.
o D: Disk Drive
Readable, writeable, random access, directory, files, multiple devices (up to 9 on MyDOS and newer SpartaDOS, 8 on AtariDOS).
o E: Editor
Readable, writeable. This is how input from the keyboard and output to the screen is normally handled. If you wish to type a small file up by hand and have it sent to the printer or a file, use "E:" as the source.
o G: Graphics Printer
Writeable. This is not built into the Operating System but must be loaded. This is an Epson-compatible printer driver which can easily dump graphics.
o K: Keyboard
Readable. This is just the keyboard. Input from it is not `echoed' back like with the "E:ditor".
o M: "Multi-Mouse"
Readable, writeable? This is not built into the Operating System but must be loaded. This is a handler which runs in the background and accepts input from either a mouse, a joystick or a touch-tablet and displays a mouse pointer on the screen.

o M: "Multiplexer"
Readable, writeable. For Atari's connected to each other via a "Multiplexer" local area network, the "MUX" Operating System replacement provides an "M:" device for computer-to-computer communication.
o P: Printer
Writeable. Send data to this and it will appear on the printer. You can print files (documents, etc.) by using "P:" as the destination. The Atari XL/XE OSes support "P1:" and "P2:", although I believe this usage is rare.
o R: RS232 (COM port)
Readable, writeable, concurrent mode. This is not built in to the Operating System, but is loaded. It supports modems. The Atari 850 Interface has it's "R: handler" 'built-in', which means the Atari also looks for an 850 (or other compatible interface) and receives the "R: handler" code from it. Other interfaces and the Atari 'direct-connect' modems require a file to be loaded which contains the "R:" code. "R1:" and "R2:" is also supported, but also its usage seems rare.
o W: Windowing (screens)
Readable, writeable. This is a graphics 8 graphical windowing driver (rarely used, unfortunately!). It must of course be loaded as well.
o Z: RTime8 Real-time Clock
Readable, writeable. This is also not built in to the OS, but loaded. This is loaded from disk and lets the user access the "RTime8" real time, battery-backed up clock for the Atari 8-bit. (This is a cartridge-based device). I am unaware of any "Z:" clone which let's you set the Atari internal (non-real time, non-battery-backed-up) clock if you do not have an RTime8, although I'd love to see one! [hint!!]
5. How do I print something from DOS?

As stated above, just use the "C"opy command, then use the file you wish to print as the 'source', and "P:" as the 'destination'. Example: "D1:DOCUMENT.TXT,P:"

-- Getting around on the Atari: BASIC --

What does "READY" mean?

Again, this is simply the prompt that Atari BASIC (and most older BASIC's) presents the user when it is in "Immediate" mode.
* Entering a command will cause it to act immediately.
* Entering a line number and then a command will place that line into the current program.
* Entering a line number alone will remove that line from the current program.

* To start a program, use the "RUN" command.
* To erase a program, use the "NEW" command.
* To clear variables, strings and arrays, use the "CLR" command.
* To load a program, use the "LOAD" command followed by a filename (see below). To load and run a program, use the "RUN" command followed by a filename.
* To save a program, use the "SAVE" command followed by a filename.
* To list a program, use the "LIST" command followed by an optional destination device ("D:file.lst", "P:"rinter) and an option start and end set of lines seperated by (a) comma(s).

Where can I learn Atari BASIC?

A (set of) file(s) will be created explaining all of Atari (and Turbo) BASIC's commands and their usage. (A larger file may be produced which will be based on examples provided in the Atari BASIC Reference Manual). (As of August 1, 1995, these particular files do not exist).

How do I quit BASIC?
* Type "DOS" to quit BASIC and return to DOS.
* Type "BYE" to quit BASIC and exit to the OS's "bye" routines (Atari Memo Pad on 400/800's, Atari Rainbow on 1200XL's, and Self Test on other XL's and XE's). (Note: On 1200XL's, use [HELP] to go to the Self Test when the Atari Rainbow appears).
* Reboot with [OPTION] held down to disable BASIC. (For emulator users, remember there are ways to totally disable BASIC.)

Why don't strings work?

Strings must be "dimensioned" like arrays in Atari BASIC. Strings are special character arrays. See the BASIC usage/etc. files mentioned in the answer to question 2. Simply put, to make a string that will accept up to "#" character, use DIM [name]$(#). Example: DIM A$(10) - now A$ can contain between 0 and 10 characters.

How do I make graphics?

Use the "GRAPHICS" command to switch between the following screen modes: (Note: All modes except 0, 9, 10 and 11 have four lines of 40 x 24 x 2 sized text covering the bottom of the screen. Add "16" to the mode number to remove this window (but do not make any PRINTs or PUTs to the standard output otherwise a GRAPHICS 0 screen will appear))

(Note: Add "32" to the mode number to keep the screen from clearing when it appears. One problem, however, all screens overlay each other so unless you only use certain modes at certain times, parts of some screens will become (or start out) with 'garbage' on them.)
* 0: 40 x 24 x 2 text
* 1: 20 x 24 x 5 text
* 2: 20 x 12 x 5 text
* 3: 40 x 24 x 4 graphics
* 4: 80 x 48 x 2 graphics
* 5: 80 x 48 x 4 graphics

* 6: 160 x 96 x 2 graphics
* 7: 160 x 96 x 4 graphics
* 8: 320 x 192 x 4 graphics
* 9: 80 x 192 x 16 luminence-only graphics
* 10: 80 x 192 x 9 graphics
* 11: 80 x 192 x 16 hue-only graphics
* 12: 40 x 24 x 4-colored text
* 13: 40 x 12 x 4-colored text
* 14: 160 x 192 x 2 graphics
* 15: 160 x 192 x 4 graphics

COMMANDS:

Commands available in Atari BASIC for manipulating simple graphics include:
* PLOT x,y - plot a pixel
* POSITION x,y - position cursor
* COLOR c - set drawing color (c=color or character value)
* DRAWTO x,y - draw a line from cursor location (set with "POSITION", "PLOT", "DRAWTO" or "LOCATE")
* LOCATE x,y,r (where r is where result will be stored)
* SETCOLOR c,h,l (c=palette location, h=hue, l=lum)

COLORS:

Note: COLOR command colors are not identical to SETCOLOR command colors:
* COLOR 0 will draw using the background color, set with SETCOLOR 4,hue,lum
* COLOR 1 will draw using color "0", set with SETCOLOR 0,hue,lum
* COLOR 2 will draw using color "1", set with SETCOLOR 1,hue,lum
* COLOR 3 will draw using color "2", set with SETCOLOR 2,hue,lum

Except in GRAPHICS mode 10, where COLORs 0, 1, 2, and 3 must be POKEd into memory locations 704, 705, 706 and 707 (the player/missle graphics color locations). Examples of this will be presented in the BASIC usage files. (Sorry)

How do I make sound on the Atari

Remember, XFormer 2.5 doesn't support sound! (XF3.0 does)
But anyway, in Atari BASIC: SOUND c,p,d,v
* c=channel (0-3)
* p=pitch (0-255)
* d=distortion (0,2,4,6,8,10,12 or 14)
* v=volume (0-15)

The buzzer character is CHR$(253) aka [CONTROL]+[2] (NOT [CONTROL]+[G])

How do I move the cursor and edit?

The Atari "E:" device (standard input/output which is the "editor")
allows the following characters for editing:

Key: AtASCII #: Use:
---------- -------- ----------
Atari none Turn inverse on/off (Atari 400/800 kybds)
Inverse [Triangle] none Turn inverse on/off (Atari XL/XE kybds)
CAPS none Turns caps-mode to lowercase (400/800 OS)
CAPS none Toggles caps-mode from upper to lower (XL/XE)
Sh-CAPS none Turns caps-mode to uppercase (all OSes)
Ct-CAPS none Turns caps-mode to [Control]-[Lock] (all)
Up ([^-]) 28 Move cursor up
Down ([^=]) 29 Move cursor down
Left ([^+]) 30 Move cursor left
Right ([^*]) 31 Move cursor right
Space 32 Move cursor right (overwrites w/Space char)
BackSpace 126 Move cursor left (deletes previous char)
Delete ([ShBkspc]) 156 Deletes a (logical) line (1-3 physical lines)
Insert ([Sh>]) 157 Inserts a physical line
Ct-Delete ([^Bksp]) 254 Deletes char under cursor, pulls rest left
Ct-Insert ([^>]) 255 Inserts space under cursor, pushes rest right
ClearScn ([^<]) 125 Clears screen
Bell ([^2]) 253 Sounds buzzer
TAB 127 Moves cursor to next TABstop
ClrTAB ([^TAB]) 158 Clears any TABstop under cursor
SetTAB ([ShTAB]) 159 Sets a TABstop under cursor
ESC 27 Sets ESCape (next edit char after is shown,
not done, non-edit chars shown (like normal))
RETURN 155 Sends End Of Line (moves cursor to lowerleft
of next line, accepts input)

Note: Inverse characters have values of the normal version of the
characters plus 128. (The only non-viewable inverse character is
inverse-ESC, or what would be the [ESC],[RETURN] combination. The
character exists, but must be set into screen RAM by hand. Oh well, at
least you still have 255 easily viewable characters! [grin])

How do I make the editor characters appear

As shown above, you must have an ESC sent before them.
* When simply entering text, type [ESC] then the edit key and the
character for that edit key should appear.
* When entering text in a PRINT statement, you must have it send an
ESC beforehand, so first type [ESC],[ESC] to make an ESCape
character appear, then type [ESC] then the edit key and the
character for that edit key should appear.
When the PRINT statement is executed, the first ESCape (which you
typed as two [ESC]'s) will make the editor SHOW the following
character (even if it is an edit character), then the character
which you entered (with [ESC] and then the edit key) will make
that character appear. This makes it difficult to align a set of
PRINT statements which make a multi-line picture or menu which

uses viewed edit keys.
It is probably best to have all of the lines in your program with the PRINT statements that can fit visible on the screen, then edit them (without putting any of the ESCape characters in, then when the picture looks like how you want it on the screen, move the cursor to on top of each edit-key character and press [Control]+[>] (Control-Insert). A blank space should appear under the cursor and the rest of the line should move right. Now, type [ESC],[ESC] and an ESCape edit-key character should appear where the blank space was. When you are finished doing that for each line with those PRINTs in it, BE SURE TO ENTER THEM INTO THE PROGRAM BY PRESSING [RETURN] ON EACH OF THOSE LINES! Whew!

Set the memory location "766" to "1" with the command "POKE 766,1" to turn on the no-edit mode (ALL characters except End Of Lines will appear, even ClearScreens!) When you want to go back into normal mode, set the location back to "0" with "POKE 766,0".

What's with the colors changing?

THIS IS THE FIRST EVER SCREEN SAVER! This is called "Attract mode" as was used on the Atari 2600 and Atari 400/800/XL/XE series (and probably on the 5200 and 7800 but I cannot confirm this). When a key hasn't been pressed for 7 or 9 (depending on OS, model, etc) minutes, the screen colors begin changing, thus protecting your TV or monitor from having an image burned on it.
* To turn this mode off, press a key, or, if within a program, use the command "POKE 77,0" at least once every few minutes (IF the screen is active, otherwise turning it off would be kinda useless).
* To turn it on, wait 7 or 9 minutes without pressing a key or having location "77" set to "0", or set location "77" to "128" with "POKE 77,128", voila! instant attract mode!

How do I access 'devices' on the Atari?

The following commands are available to Atari BASIC's (and also variations on these are available in most other Atari languages!):
* OPEN #a,b,c,d$
Opens channel 'a' for access to 'd$' in mode 'b' with auxillary mode 'c'. Channel 'a' must be free or else a 'Channel already open' (129) error will occur. To explain the different "modes", here are simply some examples:
+ OPEN #1,4,0,"K:"
Input from keyboard
+ OPEN #2,8,0,"P:"
Output to printer
+ OPEN #3,12,0,"D:FILE"
Random access to disk
+ OPEN #4,9,0,"D:DATA"
Append-output to disk
+ OPEN #5,13,0,"R:"

```
Concurrent to RS232 (modem)
+ OPEN #6,6,0,"D:*.TXT"
Directory access to disk (reads directory of "*.TXT" mask)
* CLOSE #a
Closes channel 'a' (freeing it for use)
* GET #a,b
Reads a byte from channel 'a' and stores it in 'b'
* PUT #a,b
Puts byte 'b' onto channel 'a'
* INPUT #a,b$
Reads a string (up to 255 bytes and a REQUIRED 'end of line'
(character 155)) from channel 'a' and stores it in 'b$'
* INPUT #a,b
Reads a string (up to 255 bytes and a REQUIRED 'end of line'
(character 155)) from channel 'a' and stores the numeric value of
it in 'b'
* PRINT #a,[stuff]
Just like the normal BASIC PRINT statement, but sends the
information to channel 'a' (semicolons, comas, and mixed types are
of course allowed).
* STATUS #a,b
Reads the error 'status' of channel 'a' and stores it in 'b'
* XIO a,#b,c,d,e$
General I/O call. This a little complicated and may be expanded
upon in a future revision. Just be aware of the following:
+ a - command
+ b - channel to use (usually must be free)
+ c - auxillary mode 1
+ d - auxillary mode 2
+ e$ - file or device to act upon
Examples:
+ XIO 32,#1,0,0,"D:FILE,OLDFILE" renames file
+ XIO 33,#1,0,0,"D:OLDFILE" deletes file
+ XIO 34,#1,0,0,"D:GAMES" creates a directory in My- &
Sparta-DOS
+ XIO 35,#1,0,0,"D:NEWFILE" locks a file from over-write and
deletion
+ XIO 36,#1,0,0,"D:NEWFILE" UNlocks a locked file
+ XIO 40,#1,4,0,"D:PROG.OBJ" loads and runs a binary file (like
"L" in Atari and MyDOS)
+ XIO 40,#1,5,0,"D:PROG.OBJ" loads a binary file (like "L" in
Atari and MyDOS with the "/N" option)
+ XIO 41,#1,0,0,"D:GAMES" changes default directory that
drive/subdirectory (all calls to "D:" will now occur within
that drive/directory)
+ XIO 254,#1,0,0,"D2:" FORMAT a disk (in Atari DOS 2.5, this is
format 'enhanced', to format 'single' density, use XIO 253)
(in MyDOS, this is format, but not 'enhanced', use:
+ XIO 253,#[channel],1,0,"D[drive]:" for formatting a drive in
enhanced mode).
```

NOTE: 39 and 40 are the same. Also note the useage of AUX1 in the "XIO 40" example.

-- Getting Atari files to an IBM: --

1. How can I read Atari disks on my IBM?

Note: Someone please give more details or corrections here! Thanks!

If you have double-density Atari disks, you can use the program "Util" on the IBM which can read double-density Atari disks. Please see the Atari 8-bit FAQ for more details.

If you have an Atari 1050 disk drive, you can use the program MULE to copy files, one file at a time, 20k chunks at a time, from the Atari to the IBM. You first must format a 180k disk on your IBM, the run MULE on your Atari to get a file onto the MULE disk, then run MULE on the IBM to get the file onto the IBM. Tedious, isn't it? MULE wasn't meant to be a fully-functional program, just a demo to show that this was even possible.

If you're fortunate to have a Black Box interface on your Atari, you can get an external IBM drive and the Black Box's add-on, the Floppy-Board and simply copy files from your Atari disks or hard drive(s) onto IBM disks via the floppy board, then load them up on your IBM.
2. Ok, I can't do any of that, now what?

You can use SIO2PC, which is a program for IBM's which turns your IBM into a set of Atari disk drives. You need the SIO2PC cable (which you can purchase, assembled or unassembled, or buy parts and build it yourself) and the SIO2PC software (available at UMICH). Connect your IBM to your Atari, load SIO2PC, and then run the program FILE2PC on the Atari to transfer files to the IBM's hard drive. Or instead create a disk image within SIO2PC and copy files from one disk (a real Atari floppy) to another (the SIO2PC image) with the Atari or MyDOS "C"opy command. If you want to extract files out of the SIO2PC disk image file and store them on your IBM's hard drive or floppies as single files, either again use FILE2PC or use S2PC, an IBM program which can extract files from or add files to MyDOS-compatible SIO2PC disk images!

You can use two modems (one on your PC and one on your Atari) to download files from your Atari 8-bit.

If you don't necessarily want files that you already have on your Atari 8-bit, you can download files from the huge collection available at FTP sites and Atari 8-bit supporting bulletin boards and save them onto your IBM.

If you have only one modem, so you can't connect both your Atari 8-bit and your IBM together via modems, you can do it via null-modem, OR you can upload files from your Atari to some bulletin board or account you have access to, and then connect the modem to your IBM and download the files.
3. Is there any easier way to get Disk Communicator (Atari disk image) files to and from SIO2PC disk images or PC Xformer XFD disk images other than using Disk Communicator 3.2 on my Atari! I mean, both files are disk images! They're both on my PC's hard drive! [cry]

(AND NOTE: DiskComm. doesn't like SIO2PC a lot of the time anyway!)

Yes! There's an IBM program out called "DCM2DSK". (Why "DSK" and not "ATR"? To keep people from getting confused with the ATR-8000(?))

There's also C source to a very similar program called "DCMTOATR" which works on PC's (a PC executable version comes in the archive) and Unix and probably any other system with a good C compiler.

> I thought the music for Dimension X and Necromancer by Synapse were
> pretty good too! You just can't find that kind of sound on a Nintendo
> these days. . .

Okay, got one for you: Allegedly the music for Necromancer is none other than the braintrust known as DEVO. (I had this years ago and loved it but can no longer find it. If anyone would be so kind as to help me get this I would be indebted)

FACT: In 1988 they relaesed the album "Total Devo" which had the song "Some Things Never Change" (this I do have so maybe a swap?) that was originaly from a 'computer game'.

Non-Fact: The game was supposedly Neuromancer (like the book; never read), which I never had or seen before. So, I think that they are one and the same.

Anyone??

1886. X2600

Hi!

(doesn't really belong here, but I thought I might just as well ask...)
(or perhaps even help...?)

As is well known (perhaps), there is beta version of an emulator available
(Atari VCS 2600)
, it can be found at the www.dcs.warwick.ac.uk/~wilhor/x2600.html.

I had a really strange problem concerning this one

This one's really strange, I tried downloading it via netscape (SHIFT
CLICK), I didn't get
a working copy, I was really frustrated (GZIP kept telling me, that it was
incorrectly crunched (or something like it...)). Than (I don't know why) I
checked my
CACHE directory, all files usually are stored there too. The *.tgz files
actually had
a different length... and I could unpack them... does someone know
why?

Using Netscape 2.01 (beta 16 bit (AOL...))...

Bye

Chris

(BTW: Thanks, Marat, for trying to help but you didn't really get my
point-
even know I don't understand it...)

1887. Xl-It! Version 0.11 out

Newsgroup: comp.sys.atari.8bit

```
Hello !

The version 0.11 of XL-It! is out:

XL-It! is a free ATARI 800-XL emulator which is available for
these platforms:

o NEW MS-DOS (>=i386)
o NEW SUN Sparc-Stations
o Silicon Graphics (MIPS)
o Linux (ELF/intel)

Features:
o NEW Player/Missiles with collisions
o GTIA-modes (in pixel and in textmode)
o DLIs
o NEW vertical and horizontal fine-scrolling
o Overscan, underscan and "normal"-scan supported
o 800XL MMU
o Supports reading from 2 drives (normal 1050)
o .XFD and .ATR diskfiles

For more information try the XL-It! homepage:

"http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html"

Bye,
Markus Gietzen

>Does Marble Madness exist for the Atari 8-bit? I loved this game in the
>arcades, and over here in the UK it came out for virtually every other
>machine except the Atari. Anyone out there ever see it?

Nope, sorry. That's one I REALLY wanted for a very long time, and it's not
available. %^(What I HAVE seen, instead, is a very,
very nice game called "Spindizzy". Uses a spinning top instead of a
marble, but the premise is the very same. %^)

>Also, how many sides was the adventure game "Gunslinger" on. I don't
>know if I've got them all (5), and I am not going to start playing it
>if I haven't. Actually, I may not start playing it even if I have, it's
>just that I've always wondered about that last disk......

You've got them all. %^) I bought this one around the time Atari software
was being phased out at Electronics Boutique (1989?) and recall that disks
1 and 2, both double-sided, had "Datasoft" labels... while the third disk
had what looked like a handtyped label which said "GUNSLINGER SIDE E"...
with nothing on the back.

I played Gunslinger but didn't get too far... grad school overrode
everything else, unfortunately... it looked like a decent game.

Hope this helps.

1889. help with drive/SIO2PC cable

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-02 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <31609d6f.806066@news.superlink.net>
Source record: 84714

I just built an SIO2PC cable and it works fine when I connect the 800 to the PC, but when I connect the drive to the 800 and then connect the cable to the PC the 800 sees no drives and goes into memo pad. I am using APE 1.07 and a percomm DD drive. Does it have something to do with the value of the diode on the SIO2PC cable or is it something else?

Also, I have a 1050 that powers up, but when you connect it to the 800, it reads one sector after about 10 seconds, and then makes the old 810 "bad sector" noise (head gnashing). Anyone have any idea what might be wrong?

1890. You've mentioned the rest and forgot the best: DROPZONE!

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-02 00:00:00 UTC
From: Lawrence Staveley <Lawrence@kwll.demon.co.uk>
Message-ID: <735662824wnr@kwll.demon.co.uk>
Source record: 84715

DROPZONE: Still the best Defender 10 years later..... Nice one Archer!

Anyone else out there get that hard-to-reach 1,000,000? Bet your joystick was melting by then, and the springs in your space bar were flattened! What a rush....

Whenever anyone with a 64 came round for a bit of a 'pose' you could stick this on and watch their jaws drop.

I'm primarily looking for trades but would accept any reasonable offers.

PLEASE E-MAIL ME WITH YOUR WANTS AND LISTS. READ THE WANTED LIST BELOW!

Qty Description.
APPLE RELATED STUFF
---
3 Franklin ACE 1000 - NOTE: Homebuilders ALL of the chips in this
are
socketed! Mostly LS series. BARE BONES.
1 Franklin ACE 1200 - like 1000 with an updated rom. BARE BONES.
2 Franklin ACE 10 5" floppy drives - noisy but they work good.
1 Apple Disk II 5" floppy drive
3 Franklin video cards (?)
1 Franklin disk drive controller.
1 Franklin ACE 1000(1200) power supply.
1 Apple Monochrome monitor (Excellent Shape!)

PC RELATED STUFF
---
1 BigMouth Voice mail card. works but I lost the software.
1 Epson Equity Ie V30 CPU, Monochrome *VGA* monitor, PS/2 style
101 keyboard, 720k 3.5" floppy (will part out if interested)
1 Microsoft Bookshelf CD-ROM 1992 edition
1 Tandy 3000NL 8Mhz 286, Monochrome monitor, 2 1.44 drives, 640k,
just missing a keyboard (uses standard 5 pin type)
1 Tandy 3000NL 8Mhz 286, power switch broken BARE BONES.
1 386DX20 CPU - pulled from working system.
1 Tandy 1000 - 640k, no floppy drive, needs Tandy 1000 keyboard.
1 Seagate ST21R/22R RLL controller. Condition unknown.
1 Western Digital WD1003V-SR2 RLL controller. Condition unknown.

OTHER COMPUTER & MISC.
---
1 Single trace RCA Oscilloscope, 1 Mhz internal sync with external
sync,
works great, SOLID STATE! Model WO-505A. Don't have an extra
probe,
sorry.
LOTS 64kx1 DRAM chips. 100ns, 120ns, and 150ns.

WANTED WANTED WANTED WANTED WANTED WANTED WANTED WANTED

UV EPROM Eraser! I can even live with a single chip type!
Wire Wrapping tool, squeeze or power type with bits & sleeve.
Wire Wrap sockets and ID tags all sizes needed.

SIMM Sockets (clean pulls with approx. 1/4" leads okay)
Nice soldering iron Analog/Digital that uses readily available tips.
Sider drive controller card.
MacIntosh Computer.
Other Apple stuff wanted - e-mail for list.
Amiga 500, 2000, or 3000 computer.
Other Commodore stuff wanted - e-mail for list.
Atari ST computer.
Atari 800XL keyboard
Other Atari stuff wanted e-mail for list.
TRS-80 Model 4 hard drive
TRS-80 Model 4 LS-DOS & CPM
Other TRS-80 stuff wanted e-mail for list.
Osborne 1 upgrades - DD floppy, 80 column, manuals.
SIMM RAM - any size / speed
4 BNC Ethernet cards.
ALMOST ANYTHING COMPUTER/ELECTRONICS... ask me I just might want it!

As explained in the documentation, versions of Spartados before 3.2f cannot keep up with 3x SIO. It's not a problem in APE, Spartas serial io routines just cant keep the pace.

As it came, the 600XL (US version) could NOT use a monitor ... it was
for TV use on either channel 2 or 3. IF you do the SuperVideo mod to
it, THEN you can use any monitor that has either split LUMA/CHROMA/AUDIO
inputs or split AUDIO/COMPOSITE VIDEO inputs. I did the mod on the 600xl
which I'm selling, and the difference is like day and night!

I am looking to do both (FTP and CD). But I need the software first.
Once you get your SIO2PC cable and convert your stuff over (Get
APE1.07, works the best) if you send what you have I'll collate it
with what else I am getting. The CDR's I will sell for cost-I'm not
looking to make a profit; just to help out. I know how frustrating it
is to find the s/w.
Thanks Scott

(Rich Mier says don't plug/unplug SIO into 1050 with power pak plugged
in.)
PUT THAT in the FAQ. I never knew that. I'm wondering. Is it ok to
just turn the drive off when plug/unplug the SIO or do you have to
unplug the power pak in all cases? I've blown a Atari power pak
plugging it into an Indus, but I didn't know about this one. Thanks.

(Did I send e-mail to R. Mier?)
About the plug/unplug the 1050 SIO. Rich says you gotta unplug the
power pak before plug/unplug the SIO. Can you just turn off the drive
or do you have to unplug the power pak, or maybe just unplug the power
supply from the outlet?

Source record: 84733

It's been about 8 years since I last saw my 800XL. Since then its been all PC. Lately I've became very interested in the different emulators of 8-bit platforms. I've picked up ApplePC, WinApple, and PC Xformer 3.3(demo). I couldn't be happier than to see a Atari screen on my PC. What I soon learned is that there are tons of old games and programs available for download for the Apple but not for the Atari. I think that really sucks. I doubt that people who wrote these games are making any money from them today and I think they should be available as public domain. I'll be waiting.

: you've got a tremendously misguided view of what thrift stores are there
: for. The majority of thrift stores you'll find are *not* charities put there to
: sell to people in need. They have about as much charitable intent as one
: of the jewelry stores in your local shopping mall.

: Sure a lot of them may *say* "Vietnam Veterans' Thrift Store", but if you
: take the time to find out how much goes to the Vietnam Vets, as much as 1%
: (that's one percent) of the profits go to the Vets so the thrift store owner
: (who usually runs several) can use the name. Some of the other thrifts
: *are* charities, but with name licensing like this it's difficult to tell. :)

: And while we're at it, check out the prices on some of the stuff in your
: local thrift. Especially if it's a potential collectible (*anything* that
: says "Star Wars" is a likely candidate in my area) - I saw a poster
: straight out of a Suncoast marked at $100. And my personal favorite, old
: PC-XT's. Usually these are priced at the bargain nasement price of
: $100-$200, untested and without keyboard or monitor. Selling to the needy
: indeed. :)

A lot depends on the local chapters of these charitable organizations,
how much profit goes to whatever groups.
The main ways a charitable store tries to do good-
- Employs people w/ little or no work experience, trains people generally
ignored by our capitalist system
- Profits left over go to the main organization for other deeds
- Recycling stuff that would otherwise be pitched.

Now... a store has, say, 20 employees, from management down to donation
people. Average is 1/2 full time (40 hrs a week) and 1/2 part time (20
hrs a week). So let's say that's 600 hours a week at the minimum wage-
600*4.25= $2550. (obviously, management is paid more, as well as
long-time employees after raises...) Utilities are a bear at these
places; besides water, trash, electricity, gas, and rent, we have to use
the profits to pay for trucks that pick up at peoples' homes, deliver to
us, etc. That runs about, say, $500. That's around $3000, right?

Thrift stores' average weekly sales are not much above this. A store
that does $5000 a week will have profit left over of about $2000; this is
what is then sent to the rest of the organization. That's only 40%,
which doesn't sound like a lot of profit when there are organizations out
there that claim 90% or better charitable use of donated funds...

The profits are even less when you consider that most people in a thrift store make more than the minimum wage. Our store has about 25 employees, and the average hourly pay is around $6 (skewed upwards cos of management) let's say there's an average of 30 hours per; that will work out to $3600 just in salary. If we have a poor week and do only $5000 in sales, maybe $900 will be sent on- only 18.5%.

Thrift stores are basically used not as a money making tool by these organizations- it *is* an effective form of advertising, though. Instead of paying a thousand a week for advertising, if you can get a store that will return a small amt of money AND will help keep awareness up of the charity's existance, that's a Good Thing. (tm) And, like said before, it's often a starting point for people who can't get employment; teenagers from the neighborhood, people doing community service, disabled people unable to return to their former occupation, etc. That's a nice service in and of itself.

Now- if there's something that you think is high priced, either tell management OR just leave it alone. Criminy. Stealing is stealing, whether it's from "those stupid people at the thrift store" or unemployed grad students at the mall. After all, I personally think clothing at Parisian is way too expensive, but I don't advocate taking stuff, especially when it *is* just a luxury and not something necessary to survival.

Finally- a lot of people seem to have the wrong impression; thrift stores don't exist to SELL to needy people. The stuff in thrifts are mostly luxury items; if we can help a needy person by selling them something, dandy, but obsolete computers and board games son't seem all that important when you need to buy food, y'know?

1911. Are you REALLY a stressed out student?

> --
>>>>
Unplug the power pack from the 1050, then unplug the SIO
cable. Power can be ON on the CPU. The problem has to do with the
secondary winding of the Power Pack. Remember, the problem only occurs
1 out of 10 - 20 times that you do it, not all the time.

> --
>>>>
Like I said, I won't go into an explaination of what happens,
electronicly. It doesn't really matter if the 1050 Transformer has power on
or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's. I've
replaced a lot of the CA3086's for this reason and I keep a half dozen around
all the time. One thing, if the system has been turned off for, oh say, 5 - 10
minutes it won't matter. By then all the capacitors should be bled(sc?) to
0 volts.
Yes, plugging in an Atari 1050 power pack to in Indus may
blow the power pack but more often it blows or also blows the 5 Volt
regulators in the Indus. Bought a Indus for $5.00 because of that. Two 5 Volt
regulators later it was working fine.

.

Well this might seem a bit strange, but here goes...

This list is divided into Sale, Trade, and Auction sections...
Anything not gone from this list in a week or two will be given to
the local thrift store of my choice!

****
* SET SALE *
****

Atari 2600 with box, power supply, switchbox and games:
Star Raiders
Phoenix
Centipede
Solaris
River Raid
Combat
Enduro
Frogger
$10 + $6 postage

Odyssey^2 Console with power supply and Spin-Out cart. One joystick dead
$7 + $6 postage

Hayes Smartmodem 1200 - $5 plus $3 postage

Racal-Vadic 1200 modem - $5 plus $3 postage

****
* AUCTION *
****

VGR BID

(1) Atari 2600 California Games with box -R- $3 min
(2) Atari 2600 Big Bird (w/b,i & o) box really torn up -R- $3 min
(3) Atari 7800 Crossbox with box -R- $2 min
(4) Atari Yars' Revenge cassette (a kids' story) no book $2 min
(5) "Amazing Adventures of Pac-Man" LP record (Kid Stuff) $5 min
(6) "Pac-Man's Christmas Album" LP (Kid Stuff) $5 min
(7) Atari 5200 Super Breakout w/ 1 overlay (2 available) $1 min
$1 min
(8) Atari 5200 Galaxian w/ 1 overlay $1
(9) Atari 5200 Pac Man $1

Some classic video game board games to be added in the following
days...

****
* TRADE * TRADING ATARI 8-BIT STUFF FOR 8-TRACK CARTRIDGES!
****

EXPLANATION: I have all this Atari 8-bit stuff sitting around, and
this is its last stop before I drop it all off at the thrift store.
I am almost exclusively interested in trading this stuff for 8-track
tapes. I generally want rock n roll, but will listen to any offer.
Condition or playability is not a factor unless the cart is in pieces :)
Keep in mind that I almost never pay more than 50c for an 8-track
(usually 5c-25c), so try to make it worth my while because it's going
to be somewhat pricy to ship these things! If you really want something
and have no 8-tracks, make me an offer on something else, or with
cash -- but keep in mind that some of it works, some doesn't. It
may all be fixable. I don't know--I got most of this stuff from people
who made me buy all they had to get some carts or something. And if
you want to make me a deal on everything as a package -- go ahead!!
Just remember that it's up to you whether it's worth the shipping
or not (if you want to pay postage and a few extra dollars for me
hauling this stuff to the post office, I'm all ears).
Mostly (ideally) though, I would like to trade it out for 8-track
tapes. Other interests would include 8-bit carts I don't have
(and I don't have too many -- I really want a game called Rallyrace!)
pong systems I don't have, INTV/Coleco/O^2 carts, and (this is WAY
out there, but heck, I might as well mantion it) an Arcadia console.

Atari 2600 - 3 (2 Telegames, no ps or anything)
Atari 1050 disk drive - 3 (all with power supplies)
Atari 400 - 1 (w/ raised keyboard))
Atari 410 tape recorder - 1 like new in box, 1 w/ neato dust cover
Atari 800 - 2 (1 w/ neato dust cover)
Atari 810 disk drive - 1 (w/ neato dust cover)
Atari 1027 printer - 1 (works, needs new ink)
Atari 800XL - 1 (w/ power supply)
Atari 600XL - 1 (w/ power supply)
Atari XM301 modem - 1 (lights up but doesn't work)
Assorted booklets, manuals, etc.
8-bit carts: BASIC (3), Pac-Man, Space Invaders

And by the way, I'll be willing to listen to any trade offer for any-
thing on this list, not just the "TRADE" section. Climb in those
attics and find that box of 8-tracks!

****
* THE END * and misc stuff...
****

Email me with any questions or offers. Auction ends at midnight on
April 14, 1996. Bids and everything else go to

jeremy@music.cc.uga.edu

Thanks everyone!
Jeremy

1915. New Atari emulator XL-IT

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-02 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <316137B7.4155@rcp.co.uk>
Source record: 84740

http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

I have only had this for a few minutes but I am already
excited as it currently (v 0.11) runs more software than
software than PCXFormer!

The software that I have quickly tried:

Starquake - I couldn't fault it.
Rebound - A minor problem with players but was still
playable.

(both of the above didn't work at all on Xformer!)

Chuckie Egg also worked but slowly - I can't remember
how fast the original went.

Loco - Unfortunately you cannot blow up the planes
but still playable!

Joyride (hardsoft's latest demo) It got as far as the
first demo with no problems - I didn't spend to long
playing with this one.

Tube Baddies - works as well as PCXformer but still has
problems with Players

In my opinion a much better product than XFormer,
well done Markus Gietzen!

Hello all,

I just picked up my Jaguar Kiosk from Atari and am very pleased with it. Quite huge. Has a controller and all sorts of cool stuff in it. HOWEVER,

It has a video connection I have never seen before. The Jaguar end is the same as we all know but the business end is VERY different.

It has two RCA jacks which are obviously sound and then a 9 pin DBM connector on the end. Exactly like ones you would find on an older IBM compatible monitor. Can anyone tell me what monitor this goes to?

Thanks

-marlin

I tried Joyride with Rainbow. The music was kinda messed up, and Rainbow doesn't support volume-only mode, but other than that, AND the "no further than the first part" problem, it worked very well on Rainbow, too!

I think the load problem is because of their special disk I/O routines (which allow for music and 3D animation while loading (cool!!)). I'll bet ANY emulator which doesn't fully emulate SIO would die on this too.

Hey, does SpartaDOS run on Rainbow? How about XL-It? PC Xformer? Atari800?? I know it has it's own funky I/O as well - I bet it won't run on anything that Joyride won't run on.

AND, does ANY Atari emulator support volume-only mode (digitized) sound??

Do thrift stores REALLY throw stuff out if no one buys it??? That sound
really ridiculous. In "8-track Mind," a magazine for 8-track tape
collectors, someone wrote in a story of a Goodwill store that would not
put out donated 8-tracks for sale because "they're dirty, bulky and no one
buys them anyway!" If that is true I would not donate anything to a
thrift store!
The service thrift stores provide which to me is most important, is their
making available stuff that you would never find anyplace else! If I want
8-tracks, I go to Goodwill, but if I want CDs then I'll go to Tower!

AlenSmithe@aol.com <---Yes, I know AOL sucks; I'm working on getting rid
of it!

There's nothing we wanna watch on TV tonight, but we're still gonna watch
something great- with our RCA VideoDisc player and VideoDiscs! Just flip a
switch, and on OUR TV we see Airplane or The Pink Panther, The Godfather
or Grease, Muppets, monsters, Mickey, MASH and 100 more, starting as low
as $15! And the player costs less than 500! Put it this way; we're
watching a GREAT MOVIE! And you're watching- us.
BRING THE MAGIC HOME ON RCA!

1928. Action!

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-03 00:00:00 UTC
From: George Mckinney <gmckinne@Direct.CA>
Message-ID: <4jtrm9$87p@aphex.direct.ca>
Source record: 84753

In my 8-bit days, OSS's ACTION! cart was my favorite language,
(with MAC-65 for the delicate work). Can anyone tell me if OSS is
still around, or who holds the rights to ACTION! (or if the source
code was released)
Thanks,
George McKinney

Joan--you really need to leave the formatting alone...you destroyed my post. But to answer--no I don't. And if you don't see the logic in my post...then obviously you have never searched out carts for days at 10 thrifts. Don't pass your lousy judgment on me. Go out and deal with these thrifts and then come back and talk your crap. We're talking about places that split junk up and change policy every other week...by any mean necessary...get the cart!

And the only other people buying this "old trash" are collectors...so give me a break...when have you seen a poor street urchin saving his pennies so he can buy Pitfall! for 99 cents??? Go whine somewhere else.... All serious collectors have fudged at one time or another...it has to be done from time to time.

Easier still ... null modem the file from your atari(as a DCM file) to the PC, then run the PC
program called "DCMTOATR.EXE".

There's more than one way to scratch an itch ...

1931. Problem with modem and BobTerm.

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-03 00:00:00 UTC
From: jct@astro.ocis.temple.edu
Message-ID: <4juijs$ph6@cronkite.ocis.temple.edu>
Source record: 84806

I was wondering if anyone had any insight on my problem. I have an 800xl with a 1050 dd, and an 850 serial interface. I just recently got BobTerm and I decided to try it out. I have a regular Hayes compatible modem hooked up to my 850. When I load BobTerm, I can make the modem dial and connect, but I can't get it to send anything to the screen. Am I missing something obvious, or is there something I'm completeyly in the dark about? I've never tried to use any of the serial ports on the 850 before, only the printer port. Any help would be greatly appreciated, because I'd like to start using my good old 800xl to check my e-mail and such.

Thanks,
john charles taylor
jct@astro.ocis.temple.edu

: I'm almost embarassed to ask this, but.....

: Anyone know if this emulator (dos version) can run AR...?

: Thanks.

This version can't run it. But the actual version (my development version)
is able to because I added a 1050 emulation. That means that the access
to the serial port is emulated in the way as if a 1050 is connected.

Bye,
Markus

: the Internet I have seen to date!

: Are you planning to add a section for doctoral thesis next?

: Maybe a law to censor the Inet is not such a bad thing after all...

Man, this is quite possibly the MOST moronic discussion I've ever seen. You want doctoral theses? Go to the LIBRARY, idiot! You want essays with grades and grade explanations? GO TO THE LIBRARY!

Man, if you people think this is novel in any way besides the fact that it's on the internet, you're WRONG. You can go to any library or bookstore and pick up thousands of essays on thousands of subjects, with explanations of their strong and weak points, and in some cases the grade given.

Censor the internet for this? What a fucking stupid idea. I don't suppose you knew that many frat/sorority houses keep TESTS on file? It's not illegal, it just means they're too stupid to do well on their own.

You want essays? I've received A's in courses ranging from Philosophy to Sociology to Neuroscience, etc. I'll be happy to upload any "A" grade essays I have. If you actually USE them, it's plagiarism, and you can be kicked out of school for it if they find out. If, on the other hand, you just want to get some ideas, there's absolutely NOTHING wrong with using other people's essays.

Quite frankly, I am astounded that this discussion is even here. The person who invented the site is stupid for suggesting that people put their educational careers on the line by plagiarizing, and the person who thought it was an abomination that ought to be censored either has his head up his ass or was just born yesterday.

Geeeze...

Actually, despite your exceedingly lame rationalizations, Joan had it
exactly right. You are stealing, pure and simple, and it is wrong no
matter how you may try to justify it to yourself. (No one else is
buying your line.)

Thrift stores don't charge an arm and a leg for this old stuff. Pay the
price or leave it on the shelf. Period. Anything else is *stealing*.
There is no amount of "logic" that will change this simple fact, nor
justify it.

Dr. Moze (Steve Marsh) marsh@anvil.nrl.navy.mil

14.4) How do I use my new or emulated Atari?
14.5) What prominent Atarians are reachable by e-mail?

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM,

ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

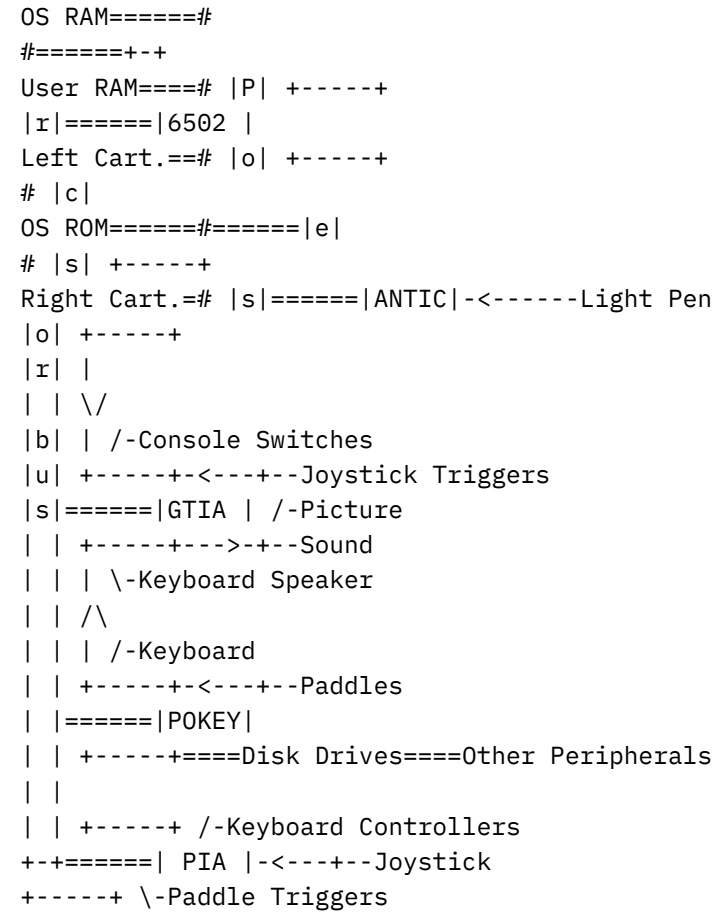
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is

beyond me. An 800XL can look like a 130XE with that 16-pin chip installed
(That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement



Beginners at using the 8-bit Atari platform may wish to contact Bill
Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned
screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4,
160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also
supported. 40 x 24 x 256-character (128 normal, 128 inverse, character
set indirection available) text mode is standard (2 colors).
40 x 24 x 128-multi-colored-character (4 colors per character allowed,
the other 128 characters have 4th changed into a color 5) and
40 x 12 x 128-multi-colored-character screen modes are available.
GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only,
and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text

2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen
modes are available.
Screen modes can be mixed (by lines) down the screen using the Display
List - a program which is executed by the ANTIC graphics chip every
screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator

A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd,
URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this
discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in
the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach
comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command
to LISTSERV@MARIST, or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please
note that this command must NOT be sent to INFO-A8@MARIST or to
info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX
INFO-A8" command to LISTSERV@MARIST or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can
then be retrieved by means of a "GET INFO-A8 filetype" command, or by
using the database search facilities of LISTSERV. Send an "INFO DATABASE"
command for more information on the latter.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin.

Mail the text of your post to:

```
group.name@news.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@bull.com
group.name@cass.ma02.bull.com
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name.usenet@canaima.Berkeley.EDU
```

group.name-news@newsbase.cs.yale.edu

For example, to post to comp.sys.atari.8bit, you might send your
message to:

comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Be sure to include an appropriate Subject: line, and include your real
name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com
(Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to
mailto:listserv@info.cern.ch (older address) containing
the following single line. (What you put on the subject line doesn't
matter; blank is OK. This line should go in the text of the message.)
You will receive as a reply a simple page intended to help you learn
more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files

(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts
usually don't arrive in the proper sequence. Also, please include a
message labeled "file transmission," containing a short description of
the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is
maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to
have seen no uploads for years, but there are some files here that aren't
on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by Eyvind Bernhardsen,
mailto:eyvind@lise.unit.no . PVV stands for ProgramVareVerstedet, or The
Software Workshop, a student society at the University of Trondheim, Norway.

ftp://nova.pvv.unit.no/pub/Atari/8bit (129.241.36.207)

Uploads go to ftp://nova.pvv.unit.no/incoming/atari/8bit; Eyvind moves
them to the appropriate directory. Please include a .readme file with
each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson,
mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari
8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The
Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 4.7) What is Preston Crow's ftp site?

Preston Crow keeps a small site filled with the latest utilities for manipulating .ATR and .XFD files.

URL:ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 4.8) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

URL:ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National Public Telecomputing Network. It can be accessed by any of the following: telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are automatically members of the official Atari user group C.A.I.N. - Central Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari Community E-Mail Directory" listing. Send correspondence and press releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the Youngstown Free-Net Atari SIG?

Youngstown Free-Net (Youngstown, Ohio USA)
telnet://visitor@yfn.ysu.edu (192.55.234.27)

Type "go atari" to reach the Atari SIG. Write to
mailto:xx140@yfn.ysu.edu for more information.

Subject: 5.3) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.4) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.5) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.6) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not
here.

Atari 8-Bit Computers FAQ and Vendor/Developer Lists

Subject: 7.9) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 8.1) What is the CAIN Newsletter?

The Central Atari Information Network Newsletter is the monthly online
magazine of the Cleveland Free-Net Atari SIG. The editor is Mark
Leair of the Atari SIG. 8-bit computers support is provided by Michael
Current and Craig Lisowski. For information, write to the Atari SIG at
mailto:xx004@cleveland.freenet.edu .

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert
entire disk images into files. To work with .dcm files you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

Subject: 10.1) What 8-bit Atari emulators exist for other computing
platforms?

These are the four emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
URL:http://www.halcyon.com/brasoft/

2) PC Xformer 3.5, from Branch Always Software, for MS-Windows.
URL:http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari Emulator for Unix and Amiga, by David Firth
Latest version: 0.3.3
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No

Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.7 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,

]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format

disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin

port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.

```
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o o
25 14
```

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock

8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

==> Astra Double-D?
SS/DS SD/DD? standard /LEDs and such

==> Rana 1000
SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps

- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition
(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE
computers (and other, those have such connector). Tested with various
Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50,
SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications,
demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson

SIO2PC is a cable and software combination that lets you use your PC as up to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to 16 megs. SIO2PC also lets you redirect the printer output to your PC printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.04 is shareware by Nick Kennedy.
filename: sio404.zip

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8-16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8-48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs

600XL Home Computer (1983) 16-64K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors

1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style

XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL,256K FTe MIO
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was

re-released as shareware. This BBS program uses a "modem clock string" rather than an R-Time 8 cartridge in order to retrieve the current time. It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE cartridge in order to run. It is in the public domain and can import and export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only, control ATASCII graphics are reserved for message data-structure bytes). FOREM-XE BBS is still currently in use as we speak, and may be reached via the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS, which is the Keith Ledbetter companion project of the EXPRESS!-TERM terminal program of days gone by. I am not familiar with this program. I think that it is written in Action! and only supports XMODEM Checksum transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE-- demo version of the OASIS BBS program. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/vendev/faq.html
news:comp.sys.atari.8bit news:comp.answers news:news.answers
mailto:mail-server@rtfm.mit.edu , message says:
send usenet/news.answers/atari-8-bit/vendev
quit

You can also ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

Rick Detlefsen is presently compiling a new comprehensive Atari computers bulletin board systems list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

>thrifts.

There is someone in desperate need of a clue here and no it's not Joan.
Stealing IS stealing, no matter how you try to justify it. I make the
rounds like everyone else, and not once have I had to resort to stealing
to get a cart.

> Don't pass your lousy judgment on me. Go out and deal with
>these thrifts and then come back and talk your crap.

You, sir, are the one talking utter crap.

> We're talking about
>places that split junk up and change policy every other week...by any mean
>necessary...get the cart!

Well hell, why not hold them up at gunpoint?

>And the only other people buying this "old trash" are collectors...so give
>me a break...when have you seen a poor street urchin saving his pennies
>so he can buy Pitfall! for 99 cents??? Go whine somewhere else....

Completely and utterly *wrong*. Many low-income families buy Atari, Coleco, etc. for their
kids because it's cheap. I should know, I sell
it to poorer folk at flea markets all the time. I also talk to these
same folks in thrift stores.

>All
>serious collectors have fudged at one time or another...it has to be done

I have exactly the same type of connection for my jag. It is an RGB
cable and it works just fine on my Phillips CM8833 MKII colour stereo
monitor.

Well, you can't stay in business with a store full of stuff that nobody will buy. On the other hand, you can't make money by throwing things out. Each store has to try to balance the amount of space they have for proven money-making items and rare collector's items (which only a rare collector will buy).

You know, I've never been able to understand this. ANY competent
instructor/teaacher/professor will instantly recognize when a student
hasn't written his/her own paper. Styles don't change overnight.
Students using these pre-written essays, even as a guide, are risking
academic misconduct which is grounds for expulsion.

Anything for buck.

I certainly don't think anyone needy is gonna spring $230 each for the IBM
5150 (?) server and printer that showed up at a local Goodwill store. I
don't even think anyone NOT needy will be interested.

Can anyone tell me how to load the "Star Rider" demo? I can load the demos.xfd image, but I'm not familiar enough with Atari DOS to read the file names included in that .xfd. I used to have an 800xl back in the day, but I was a lamer and had menu programs on all my disks so I could load my programs by just choosing a number (or selecting them with the joystick!).

I don't know what the going rate for such items are, but...

If you can warrant that everything is in good working
shape, and include power supplies, and a TV switch box,
I'll make a preliminary offer of $85.

If you can, let me know what sort of other offers you get.
Thanks.

I have an Atari 130XE, and I've only used a tape drive to store programs
until now. I recently purchased a 1050 drive, and need to know how
to format a new disk and read/write to it. I've tried typing in 'DOS'
with a new disk in the drive, but all I get is the SELF TEST screen.
I don't have a pre-formatted disk, but I know there's got to be a way
around that.

Please help !!!

>of it!

All thrift stores have limited space, and they have to decide what to
put out for sale on the basis of what their experience tells them will
sell. They cannot afford to keep everything that is donated. In fact,
you should try working in one for a while to see what kind of stuff is
donated. It is often worn out, filthy, non-working and unrepairable, or
just something that no one will buy, no matter how low the price.

The larger ones such as Salvation Army and Goodwill can store unusable
clothing and sell them as rags. They used to do a lot of repair, but
they do not do that much any more, so broken stuff often just winds up
in the landfill.

I work at a small local thrift store. We do only minor repairs, and the
unusable clothing is given to Salvation Army. We do try to be sure that
things offered for sale are in working order, and we give credit (not
cash) for items that customers find do not work as they should. Those
things that we have found do not sell are usually disgarded
immediately.

We are fortunate that in this area we can recycle most things that we
cannot sell, as long as it is usuable for parts or by someone who is
not too particular. At least it can be used one more time before it

finally ends up in the landfill.

Sorry to be so long-winded. I just wanted to say: before you complain about the stores' policies, think about some of their problems.

Snowfite 2 is (I believe) the same as Snowfite except there was a title screen added. I don't know if the game code itself has been altered in anyway. Sorry if I inadverntantly misled anyone. I have received two requests for the programs. I've dug up the disks, now all I have to do is unplug my modem and plug in my Sio2pc cable and get them transferred to my PC. After that, I will zip and uuencode them and probably just mail them to the people who asked for them. I can't seem to get access to any newsgroup with 'warez' in them although I can post to alt.binaries.games so I may put it there if my mailbox gets flooded.

1) Yep, there is an Amiga version of Marble Madness. It's a good port from
the arcade console.

2) Don't know about MM for the Atari 8-bit, but if you're merely looking for
pushing-a-marble-through-tricky-mazes play-action, you've just simply GOT
to get a copy of SpinDizzy. IMHO it's even a bit BETTER than MM because
it contains a lot more variety. Excellent piece of work, though I don't
remember offhand by WHOM. Can anyone here give Lawrence a pointer to a
copy of SpinDizzy?

This is called ``peephole optimization,'' and is provided by GCC.
What you do is determine common sequences of bad or slow code that the
compiler generates, and add a peephole optimizer to replace them
with good fast code. In GCC, this facility is provided as you write
the machine spec for a new processor.

> Well, the manual says that gcc is a 32 bit compiler... Perhaps it would
>really be better to try to make a ``true'' 6502 compiler (i.e. one which

GCC will work with quite a range of basic data type sizes. It is by
no means fixed to 32-bit processors, at least for targets. The
cross-compiler platform should be 32 bit, though (no big deal).

>else?

Yes, the Percom drives are very VERY picky. I have a Percom Ds/DD
drive here and it refuses to work with anything but a stock 1050 as
drive #2. It just pukes w/ an APE cable, 810 or any other
peripherals attached.

I would guess they are very sensitive to the voltage on the READY line
of the SIO bus, but ive never checked for sure.

>Also, I have a 1050 that powers up, but when you connect it to the
>800, it reads one sector after about 10 seconds, and then makes the

>might be wrong?

If it does that w/ all disks I would say the drive needs service. I couldn't
get into the drive guts myself, but there are many people in the group who
are very experienced at fixing 1050's so you should have good luck getting
some advice on that.

I want to know which 8 bit atari is the first, which is
the seconds and so forth in the hit parade of power. For example.
1) 130xe
2) 800xl
..
..

it is just an example.. i don't really know.. help me here :)

Well I've got some offers on some of this stuff... I'll listen to
any offer you can make with anything on this list! Especially
8-tracks... oh yeah!!!

Well this might seem a bit strange, but here goes...

This list is divided into Sale, Trade, and Auction sections...
Anything not gone from this list in a week or two will be given to
the local thrift store of my choice!

****
* SET SALE *
****

Atari 2600 with box, power supply, switchbox and games:
Star Raiders
Phoenix
Centipede
Solaris
River Raid
Combat
Enduro
Frogger
$10 + $6 postage

Odyssey^2 Console with power supply and Spin-Out cart. One joystick dead
$7 + $6 postage** SOLD **

Hayes Smartmodem 1200 - $5 plus $3 postage

Racal-Vadic 1200 modem - $5 plus $3 postage

****
* AUCTION *
****

VGR BID

(1) Atari 2600 California Games with box -R- $3 min
(2) Atari 2600 Big Bird (w/b,i & o) box really torn up -R- $3 min
(3) Atari 7800 Crossbox with box -R- $2 min
(4) Atari Yars' Revenge cassette (a kids' story) no book $2 min
(5) "Amazing Adventures of Pac-Man" LP record (Kid Stuff) TRADE PENDING
(6) "Pac-Man's Christmas Album" LP (Kid Stuff) TRADE PENDING
(7) Atari 5200 Super Breakout w/ 1 overlay (2 available) $1 min
$1 min

(8) Atari 5200 Galaxian w/ 1 overlay $1
(9) Atari 5200 Pac Man $1

Some classic video game board games to be added in the following
days...

****
* TRADE * TRADING ATARI 8-BIT STUFF FOR 8-TRACK CARTRIDGES!
****

EXPLANATION: I have all this Atari 8-bit stuff sitting around, and
this is its last stop before I drop it all off at the thrift store.
I am almost exclusively interested in trading this stuff for 8-track
tapes. I generally want rock n roll, but will listen to any offer.
Condition or playability is not a factor unless the cart is in pieces :)
Keep in mind that I almost never pay more than 50c for an 8-track
(usually 5c-25c), so try to make it worth my while because it's going
to be somewhat pricy to ship these things! If you really want something
and have no 8-tracks, make me an offer on something else, or with
cash -- but keep in mind that some of it works, some doesn't. It
may all be fixable. I don't know--I got most of this stuff from people
who made me buy all they had to get some carts or something. And if
you want to make me a deal on everything as a package -- go ahead!!
Just remember that it's up to you whether it's worth the shipping
or not (if you want to pay postage and a few extra dollars for me
hauling this stuff to the post office, I'm all ears).
Mostly (ideally) though, I would like to trade it out for 8-track
tapes. Other interests would include 8-bit carts I don't have
(and I don't have too many -- I really want a game called Rallyrace!)
pong systems I don't have, INTV/Coleco/O^2 carts, and (this is WAY
out there, but heck, I might as well mantion it) an Arcadia console.

Atari 2600 - 3 (2 Telegames, no ps or anything)
Atari 1050 disk drive - 3 (all with power supplies)TRADE PENDING
Atari 400 - 1 (w/ raised keyboard))
Atari 410 tape recorder - 1 like new in box, 1 w/ neato dust coverTPEND
Atari 800 - 2 (1 w/ neato dust cover)TRADE PENDING
Atari 810 disk drive - 1 (w/ neato dust cover)TRADE PENDING
Atari 1027 printer - 1 (works, needs new ink)
Atari 800XL - 1 (w/ power supply)TRADE PENDING
Atari 600XL - 1 (w/ power supply)TRADE PENDING
Atari XM301 modem - 1 (lights up but doesn't work)
Assorted booklets, manuals, etc.TRADE PENDING
8-bit carts: BASIC (3), Pac-Man, Space Invaders

And by the way, I'll be willing to listen to any trade offer for any-
thing on this list, not just the "TRADE" section. Climb in those
attics and find that box of 8-tracks!

****
* THE END * and misc stuff...
****

Email me with any questions or offers. Auction ends at midnight on
April 14, 1996. Bids and everything else go to

jeremy@music.cc.uga.edu

Thanks everyone!
Jeremy

>Please help !!!

David -

DOS is a piece of software which supervises the management of a collection of raw disk-sectors into named "files." An Atari 8-bit computer "by itself" possesses just enough capability to read and write those raw disk-sectors, but NOT the DOS which organizes and manages them "as files." DOS must be loaded in from disk, typically by booting a special "DOS disk" at powerup time. (One exception is SpartaDOS X, which resides on a special left-slot cartridge that you plug in; the SDX cart then has a slot on ITS top, where you can plug in "normal" cartridges.) There are several DOSes available. I believe that at least one, called "MyDOS," is freely available and can be FTP'd from the Atari 8-bit archive at atari.archive.umich.edu. There may be several other DOSes there as well. Look for it/them.

Unfortunately you're going to run into the problem of "how to download a file to disk, if you don't have DOS." Several programs exist which make it possible to write double-density Atari DOS diskettes on a PC; in theory you could download the necessary Atari DOS files to a PC, then use one of these programs to place the files onto an Atari diskette. However, the programs require a 360K drive -- an increasingly rare animal -- on the PC, and a "true double-density" drive -- which a stock 1050 is not -- on the Atari. Furthermore, I doubt that any of the available programs possess the ability to write the Atari disk's "boot sectors," without which the Atari won't be able to load DOS from the disk no matter what else you do. A hardware gadget called "SIO2PC," with corresponding PC software, makes the PC emulate an Atari disk drive, including, I believe, the ability to boot from the emulated drive. You can download a DOS-boot-disk "image" file from this network (someone else here can probably tell you exactly where) and boot it through SIO2PC, then create a new, physical DOS boot disk on your 1050.

Probably the easiest, least expensive thing to do, though, is to beg :-) on this newsgroup for someone to snailmail you a DOS boot disk. I'd inquire about a modem and terminal-emulation software while you were at

it, too, so that you can download additional software from this Net and such remaining Atari BBSes as still exist (a list was posted here recently).

Good luck; hope this helps. Welcome to the world of latter-day Atari 8-bit fandom!

->
-> Home filing manager was a normal 720 disk, so after sector 720 thats
-> why you are getting the errors.
-> When I left the scene in 1986, I had converted the home filing
-> manager to a FILE; you still needed the full disk to read the data
-> from, but at least the program was a file, which has the best chance
-> to run on any emulator. Each sector in the disk stored one file; they
-> were not stored in straight ATASCII, as I recalll; the easiest way to
-> get the data would be to print it out and then scan/ocr it back in...
-> time consuming but I don't see any other way to do it, as HFM didn't
-> have any comm capabilities.....
```

Over the years I've found the HFM to be one of the best and most useful 8-bit programs, but as you point out, HFM "didn't communicate" in any normal way. Thus I agree with you: making a hardcopy printout and copying data back in to some other platform from that printout seems to be the only way to move that data to other computers. The original message poster asked whether anybody had ever come up with a utility program to re-create data directly from an HFM datadisk so as to shortcut this process. I too would like to hear if anybody has such a program.

Regarding how the HFM program stored its data, I think you make it sound too good. HFM encrypted its data. When one uses a disk utility program to read the sectors on the disk, the data is indeed ASCII, but it's all jumbled up (indexed) in a way meaningful ONLY to the HFM program itself. The "jumble" can be read by the human user, but it's useless info. Presumably there was a pattern to how the HFM indexed the data, so a utility could be written to decrypt the HFM data and put it back together again. The question is whether anybody ever did that??

Did the Percom drive work before? Since your disks work on the 1050 drive
and not on the Percom, maybe they are enhanced density disks. If you are
using Dos 2.5, try the "Format Single" option on a blank disk, then "write
DOS files", and see if the Percom will read that disk.

I am currently working on sound-support. I don't know when I'll release
the next version. And please: never forget that this is 0.11 what you
are using ! There are several bugs and I know of these.
Before you ask: Yes, I plan to add volume only support but I can't
promise how good this will be.

SVGA: Using this resultion is a bad idea because it will speed down the
emulation and the screen will be smaller.
But I'll use a resultion of 320x240 pixels (mode-x for those who are
interested) in one of the next versions. I've also noticed that some
programs have a higher resolution than 320x200 pixels. I think this will
solve this problem.

Bye,
Markus

1988. 8-Bit Tech Docs For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-06 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <199604061616.AA150327385@relay1.geis.com>
Source record: 84763

I have a package containing the following Atari 8-bit tech docs for sale:

SAMS Computerfacts Atari 800XL Computer (original)
SAMS Computerfacts Atari 1050 Disk Drive (xerox)
Commodore 1902 Split-Video Color Monitor (original)

Each set of docs contains full electronic schematics & repair info.

Price of the package is $20 (includes postage). USA buyers ONLY.

This is a package deal only, no docs sold separately.

:>back together again. The question is whether anybody ever did that??
:> --David Moeser, Censornati, Ohio
:> email to: david.moeser@bpdomain.lod.com

Using an executable version of HFM [patch was available on CIS or
GEnie] I had years ago, I seem to remember writing a TextPro macro to
reformat data files. Don't know if I ever finished it, or where it
would be now. But it shouldn't be tooo difficult for someone used to
TP macros.

1993. Seagate question

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-06 00:00:00 UTC
From: he110@cleveland.Freenet.Edu
Message-ID: <4k6ur9$2ko@madeline.INS.CWRU.Edu>
Source record: 84768

I have the opportunity to buy a Seagate ST-251 42M hard drive.
I have a 256K MIO and an Adaptek 4070 Host adapter. I also have
a Xebec host adapter lying around. My question is:
Can I use this Hard drive with these items, and if so, what is
the dip switch settings on the Adaptek and/or Xebec?
If possible, could someone give me a complete description of
all the dip switch settings on at least the Adaptek?
If I could use this drive, I could have TWO 16M partitions, as
well as one 10M partition. This would greatly expand my Hard
drive space.
Thank you in advance.

Or save some time running around and drop in to
B&C Computervisions in Santa Clara (a suburb of SF).
Two years ago, I visited the store there, and you could
buy an 800XL in a new box and all.
Their address at that time was:

3257 Kifer Road

I'd give the telephone number they had at the time, but
it may have changed. Check directory assistance.

Good luck!

Actually, that is an XOR Bitmask you are seeing in the sector dump. If
you have a program (I used DISKEY) you can add a "Mask" to the sector
and a lot of the text will be readable. The Mask is different for each
program and exactly what characters needed to be on the screen. I am
bored, and I have my drives working now, so I think I will re-crack
HFM and upload it. Should be done in about 4 hours.

I was at a garage sale yesterday, and I picked up an ATARI 800 system with the BASIC cartridge and all the cords for $2. The guy said it broke. I took it home, and it worked...he didn't look to swift though...:)

Anyway, my point here is this: What can I do with this? Is there anybody out there that has old ATARI 800 stuff? I recieved no reference material with it...is ATARI BASIC much different from IBM/C-64 BASIC? I kinda forget it...after I learned c..he he he

Let me know if any of you have files/html's on this information.

Thanks,
Son of a Butcher

: Actually, despite your exceedingly lame rationalizations, Joan had it
: exactly right. You are stealing, pure and simple, and it is wrong no
: matter how you may try to justify it to yourself. (No one else is
: buying your line.)

You're pretty good at putting it in "black or white" terms, however, what about this situation: A Goodwill has a 2600 system with PS, controllers and 8 games for $25. They also have a box full of other loose games. Would it be wrong to swap the games included with the 2600 for different loose games (all the games were marked the same $2 price.. it looked like they randomly threw 8 in with the system)

I ask this because I did this once.. a friend wanted a 2600, so I wanted to buy the system.. I had all 8 of the originally included games, so I exchanged 4 of them for carts I didn't have, and 4 for games that were IMHO more fun (for my friend) ..none of the games were better than R..

The 4070 Adaptec board is a RLL controler. If you use it
with the ST-251 it will try to format it to about 65 MEGs. Might work
and might not, I have my doubts. The surface of the ST251 was not
made to handle RLL data encoding.
As to the jumpers, only worry about A-B, C-D, and E-F.
These are the Controler's Address in which you don't want any
installed (LUN 0). A-B is the Least Significant Bit.
Hope this helps;

Rich Mier

(1) Don't post large binaries to MESSAGE newsgroups. Post them to
BINARY newsgroups!
(2) Tsk tsk for pirating.
(3) If you want to extract files out of an ATR, just use "S2PC",
"AtarIMG" or "ATR2Unix" (there's a version compiled for MSDOS, I believe)

Sidenote: We need an ATR->DCM converter, darnit!

This is the announcement for OS/A65 version 1.3.5e

OS/A65 is a multitasking/multithreading Operating system for 6502
computers. It runs on systems with (74ls610) MMU and on systems
without. Most notably and new in this version the good 'ol C64!

Some of it's features are:

- preemptive multitasking (as far as tasks behave well and don't do SEI)

- microkernel design - hardware dependence (nearly) completely in device
drivers

- comes with filesystem drivers for CBM parallel and serial IEC bus
(although the C64 serial bus is not tested, as I have no C64 around
at the moment)

- filesystem for IBM-PC style diskettes (several formats, 12 bit FAT)

- shell with pipes and I/O redirection.

You can find all of it on this WWW page:

http://www.tu-chemnitz.de/~fachat/csa/

Well, there still are glitches, but the system itself is stable.
I will not do any development any more, as my interests have moved,
but I will gladly receive patches, fixes, ideas,...

See you
Andre

: IMHO more fun (for my friend) ..none of the games were better than R..

I personally don't see anything technically wrong with swapping
cartridges of like-value. However, I feel it would have been more
considerate to ask first if you could substitute the carts you wanted for
the ones included. Chances are, they would have had no problem with
that. After all, a sale's a sale.

But $2.00 per cartridge? Guess I got lucky. The thrift I shop at sells
cartiridges for 25 cents no matter the title or system. Last time I was
there, they had 2600, TI-99, and even an Oddyssey II cart. On top of
that, I was able to pick up an Atari 1010 recorder for $2.50. Not a bad
find, if I might say so myself. :)

I'd enjoy it very much if it could be found!

Either Dick(head) DePew's binary killbot got it before it
landed here at Nyx, or else something else happened.

Could you email it to me?
I'd apprectiate it very much.

: If you have an adaptor to hook a VCR to the SVGA monitor, it should also
: work with the Atari.

There is a company called Harmonic Research which is about to sell a box
which will allow S-Video to VGA at 31.5 kHz scan-doubled!

They currently sell a box which will permit S-Video hookup to a 15.75 kHz
RGB monitor like the Commodore 1084, Magnavox CM-135, or the NEC 3-D.

The Atari 8-bit is capable of generating S-Video equivalent via the luma
and chroma pins on those models with the full monitor port connections.

Technically, it's probably not OK. However if the carts are all the
same price, it should be alright to switch. Just to keep things on the
up and up, you should talk to the manager (probably not an ogre). When
I put game systems out for sale, I really do just throw in some carts.
If someone wants to switch, it's perfectly alright with me.

BTW, I'm not a manager. I just check out the games.

You should have probably asked the store manager or someone else in
charge if you could do substitutions.

This whole thread also makes me wonder if a national classic video
game convention will ever come to light, and if it does, how people
are going to protect their stuff from theft from the hordes of obviously
dishonest collectors out there.

You need a floppy disk with one of the many "DOS" (Disk Operating System) programs on it. The Atari Company DOS programs, for example, consist of two important files: DOS.SYS, which is the DOS program, and DUP.SYS, which stands for Disk Utilities Package and puts the various DOS commands on your screen in menu form. A master disk of this type must be in your floppy drive every time you turn the computer on, and it will automatically load these two files.

You're correct, except Dick DePew doesn't just bother
with alt groups, he bothers all newsgroups.
I don't know if he's still doing it, but it was just
within the past month or so that he's released his
censoring piece of crap on the newsgroups to cancel
binarie posts from non-binary newsgroups.

It's his claim to internet (in)fame(y).

Hi,

I am new to the Atari 8 bit community having just recently acquired an old Atari 800, so I apologize if this is a dumb question.

How do you take a .DCM file on your PC and convert it into a useable bootable floppy for your Atari? In particular I am trying to get SpartaDOS 3.2f working. I have the file "ftesd32f.dcm" on my PC and my PC has a an old 360K floppy installed. I have no bootable DOS disks for my Atari. Where do I go from here?

I have the Atari 8 bit users FAQ and did not find it very helpful as what to do with .DCM files. :-(

2033. SpartaDOS on .xfd File?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-08 00:00:00 UTC
From: Paul Weinhold <pwein@umich.edu>
Message-ID: <3169A9C7.1684@umich.edu>
Source record: 84665

Greetings to all fellow Atarians,
I just discovered this newsgroup. The Atari topics you have here bring back fond memories of my old 800 and 800XL machines from 1980 - 1989. Then I bought my first PC.
I am quickly learning all about the XF3X transformer program and the variouss atari-2-pc type disk (and cable) utilities.
Almost all of my old Atari disks are in SpartaDOS format. I have legal copies of SpartaDOS versions 1.1 through 3.2D. I enjoyed using SpartaDOS for many years. Can the XF33 transformer use SparataDOS on .XFD images? How could I create an .XFD disk image with the correct boot header without having any direct connector cables? Could someone tell me what PC utility would allow this?
Or could someone send me (by e-mail) an .XFD file that contains SpartaDOS boot sectors (versions 2.3 or higher)? I can provide my own SpartaDOS files after I get one "starter" .XFD file. IS THIS CORRECT?

Thank you to any Atarian who would like to help me with this little project. Maybe I could provide some return favor?

from Paul Weinhold, in Ann Arbor, MI

Source record: 84667

I have for SALE one (1) UNOPENED in original condition software package by SUNCOM titled PQ/The Party Quiz Game @ $45.00 ! Shipping additional.
This program runs on Atari AND Commodore 64 computers.(5.25 disk) 1 to 4 players. Includes 4 Quick Response Controllers, PQ disk, Question DIsk, Interface Module and Gamer Guide.

The package (still wrapped in original plastic) has the following notes: Trivia At Its Best. History, The Arts, Science, Geography, SPorts and Entertainment. Move away from your keyboard, sit down and relax. As your home computer asks questions, race your mind for the correct answers. Match wits with your friends or play alone. PQ's exclusive Quick Response controllers let from 1 to 4 players or teams react instantly to this high energy, exciting computer challenge. Pause feature lets you stop game in progress. Optional individual player handicapping can equalize player skills. Just read questions on the screen and hit PQ's controllers for the correct answer.

This program looks really neat and would be fun for the entire family!

Please e-mail me if interested. Please respond with ups shipping address so I can calculate freight charges. Thanks for looking, Mark.

-> into the power supply which i donno what for (either ATARi or C64)
-> COuld it be a problem ? Did i kill it ? if not what's wrong then ?
-> and btw: how do i format a disk on atari ?

There's no way to diagnose your monitor problem without more info.
You need to recheck everything in your system. When you do that, you'll
probably find your answer.

If you don't know how to format a disk, you're apparently at the
beginner level in using the 8-bit computer. What you need to do is get
some beginner books on using the Atari. Nowadays these can be found at
firesale prices at library sales, goodwill stores, and so on. Such
books would also explain how your 8-bit system works and thus steer you
to an answer to your other problem.

Source record: 84669

```
-> Here is the problem. I turn on the drive (PERCOM),
-> I hold down OPTION key and turn on the computer (800XL), after
-> a while the message "BOOT ERROR" appears on the screen. I tried the
-> same disk on my computer and on the other computer (800xl too and
-> 1050 drive). No disks work on my drive but they all work on the other
-> computer. What is the problem ? any guesses ?

You need an Atari-specific master disk with a "DOS" (disk operating
system) program on it. As I indicated in the other message, you need to
get some beginner books; they'll explain everything.
```

This sounds like a *great* development, considering it's getting increasingly hard to find a good composite monitor. Do you know anything more about the company and/or the product, Tom?

A brand-new C64 CD-Rom is available.
5650 C64-disks are on it.

The files can be used in most available C64-emulators for almost every computer-system.
The files can also be easily transfered back to an original C64.

Play the old games again, or watch the demos.

For a complete index-file ftp to:
utopia.hacktic.nl pub/c64/Misc/c64cd96.lha
dhp.com pub/c64/scene/others/c64cd96.lha
arnold.hiof.no (still in the incomming directory)

All you'll ever need for the C64 is on this CD-Rom!

For more info or orders, just send me an e-mail.

I'm selling the following Atari items. POSTAGE IS EXTRA.

IMPORTANT: Everything is sold "as is". Any known defects are listed.

HARDWARE:
ATARI 1027 printer $2 defective. 1st 40 columns prints normal, 2nd 40
columns print scrambled text.

ATARI 810 disk drive defective $5 Spins, but doesn't read.

MPP-1150 Parallel Printer Interface $2
Connects Atari 400, 800, 600XL, 800XL to a parallel printer using the
36-pin Centronics standard. It also worked with my 130XE.

SOFTWARE:

ST SOFTWARE - All of the following software for $20.
Time Bandit, Bard's Tale 1, Arctic Fox, Boulderdash Construction Kit,
Night Hunter, Bubble Ghost, Populous, AD&D Hillsfar, AD&D Heroes of the
Lance, GFA BASIC 3.0 and approximately 30 disks of public domain software,
mostly from Bre Software and Accusoft.

ATARI 8-bit SOFTWARE - $5.00 for all
Ballblazer, Lords of Conquest, Guantlet, Micro League Baseball, and a
Galaxian cartridge with no box or manual.

MAGAZINES: 25c each

ST LOG
1988 May Jun Jul Aug Sep Oct Nov Dec
1989 Jan Feb Mar Apr May Jun Jul Aug Sep
ANALOG - Each issue includes a 32(?) page ST-LOG pullout magazine.
1986 Apr May Jun Jul Aug Sep Oct Nov Dec
START
1989 Sep Dec
1990 Mar Apr May Jun Dec
1991 Jan Feb Apr
ATARI INTERFACE Aug 1990, Feb Mar Jul 1991
ATARI EXPLORER Jul 1992
ST X-PRESS Oct 1989
ST FORMAT (British) Nov 1993

Message-ID: <799691552wnr@kwll.demon.co.uk>
Source record: 84804

> I've got Alternate Reality in XFD format and am trying (and failing) to
> convert these images to ATR. Has anyone done this already?

Yes, and here's how (if you have Xformer?)

1) Create a blank .ATR disk somehow.
2) Load XFormer with DOS in D1:, AR.XFD in D2: and the blank in D3:
3) Go to DOS
4) Use COPY DISK to copy D2: to D3:
5) Quit Xformer.

Your 'blank.atr' will now hold the contents of the .XFD file. Repeat this for all of them and you're done!

Hope this helps.....

I don't know where you go to school but when you've got 70,000 students teachers wouldn't notice if your girlfriend came in to class as you. If you think teachers actually notice the styles of their students (other than profs you've had a few times before) I think you've graded one too many papers. When you've got 200 papers to grade you won't notice.

MR was originally released on cartridge, with a disk version later... I
bought the disk version, cracked it, made various modifications to it, etc,
but there was no guardian. If the 32k version was released, I don't know
when or in what format...

2050. AUCTION: Atari XEGS, 400 INITIAL POSTING

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-09 00:00:00 UTC
From: summers@flop.ENGR.ORST.EDU
Message-ID: <4keqsg$rn2@engr.orst.edu>
Source record: 84607
Cross-posted to: rec.games.video.classic,alt.games.video.classic,rec.games.video.marketplace,comp.sys.atari.8bit

4/9/96 16:00 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $25 <min>
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 <min>
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

It's been 7 years since I plugged Atari 800XL back up. Now that I have been fully asimilated into the IBM clone world, I don't remeber much about the Atari except for the basics. I downloaded an Atari emulator, and decided to start messing around with the Atari again. I also downloaded some Atari DOS files from the internet, and uncompressed them, but all I have now are .DCM files. I have been able to copy them to the Atari with out any problems, but how do I convert these into the DOS.SYS and DUP.SYS files? If anyone can help, please send email to me at brian_burns@yvv.com

You had it right first time...

1..130XE 128k Ram

2..800XL 64k Ram and built in Basic.

3..1200XL 64k Ram but uses the Basic Cartridge

4..800 48k Ram uses Basic Cartridge

5..600XL, 16k Ram Built in Basic

6..400 16k Ram uses Basic Cartridge..

Guessing any modified (upgraded) computer would move it up a
notch on the chain.

Or if you can find a 1400XLD..that would be at the top of the
list due to the rarity of the beast..

Bob

Have you tried swapping the CPU? With all the Modifications, 'Maybe'
someone put it on a Socket? Other than that, on CServe, there was a short aticle
by Bob Puff, 2 Mods that he recommends on machines running a Black Box or MIO
or highly modified memory. One has to do with the OS ROM.

You can get Spartados 3.3g from the archive site
ftp://amiga.archive.umich.edu . I believe it's in .DCM form.

Essay-writing services and essay archives have been prolific for
years all over North America. Spotting plagurized essays is not
trivial.. especially with hundreds of essays to mark. Since this
repository is only one of dozens, there is no way for a prof to stay on
top of them all.
This kind of service is not laughable; it is a severe problem,
both in terms of equity and education. Anyone who makes use of it
ethically (and morally) reprehensible in my view.

Actually, I made it a habit to offer my seminary profs a free steak dinner if they read a message to that effect in the exact center of my term papers. I never had to give a dinner.

Some graded by weight. Others by how close to the wall the paper fell when tossed over the shoulder. Others seemed to keep track of what I had said in class -- and that was the basis for grades.

I confess -- for one prof, I never dared a dinner. He circled misspelled words, typos, and grammatical goofs any chance he got. I'm not sure he READ the paper -- but boy did I ever learn to SPELL!!

The only thing that worries me is the speed... I assume sound, etc. will
be available in later releases... I fired up AR and noticed that the
graphics system seems to be VERY well emulated.

Source record: 84689

If the same disk you say you put into the Percom will in fact work on a 1050, then your Percom is perhaps out of alignment or has other problems.

You can replace the drive mech in the Percom with a standard IBM 360k type mech to check this out. If it still does the same with a different mech, then you have other problems with the Percom.

Bob

2070. Disk versions vs. Cart versions

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-09 00:00:00 UTC
From: krieg@earth.execpc.com
Message-ID: <4kdt8q$ppf@earth.alpha.net>
Source record: 84690

Does anyone have a list of games that had different versions?

I have heard that the disk version of Frogger has songs that play during gameplay, just like the arcade. Is this true? The cart does not do this.

What about Wizard of Wor? Did the disk version improve on the cart?

I would be interested in any known variations.

2073. Re: bincancel:16 large binaries:AR281:@@NCM

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-09 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-281.a@redpoll.mrfs.oh.us>
Source record: 84693
Cross-posted to: alt.retromod,comp.lang.javascript,comp.music.midi,comp.sys.atari.8bit,rec.autos.4x4,rec.autos.market,rec.autos.marketplace,rec.autos.misc,rec.games.computer.doom.editing

Binary posts do not belong in unmoderated discussion groups.

I run a program that searchs for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 16 cancels for large binary files (average size 263,887
characters - total size 4,222,190 characters) posted to 8 different
unmoderated discussion groups in the comp and rec hierarchies as
follows:
7 rec.games.computer.doom.editing
2 rec.autos.4x4
rec.autos.marketplace
rec.autos.misc
2 comp.music.midi
2 comp.lang.javascript
1 rec.autos.misc
1 rec.autos.4x4
rec.autos.market
1 comp.sys.atari.8bit

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.announce. Look
for AR281 in the subject. The full report can also be found in
alt.nocem.misc and alt.retromod.

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated akr, biz, comp, misc, news, rec, or sci
(except for comp.binaries.apple2 and rec.games.bolo)
BINARY: (base64, binhex, uuencode, and xbtoa encoded files, etc.)
SIZE: > 100,000 characters (size * number of parts, if multi-part)

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. This permits news administrators
and users to decide for themselves whether to receive binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

Yes, I have both versions of Frogger and the disk version has very
catchy music. The disk version also records the highest scores .
Cartridge games were normally 8 or 16K, but the disk versions could be
32K or more allowing for additional features/screens/music/options.

: bootable DOS disks for my Atari. Where do I go from here?

: I have the Atari 8 bit users FAQ and did not find it very helpful
: as what to do with .DCM files. :-(

Two words: "Get SIO2PC"

Also, read my "new user" FAQ:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html (or ask me to
e-mail it to you)

As to what DCM's are, they're simply disk images. My FAQ goes over a lot of
this schtuff.

Yeah, but just because you have easy, quick access to 'comp.sys.atari.8bit'
doesn't mean everyone does. Imagine your 8-bit using brothers and sisters
who use an offline reader, so they have to download the WHOLE newsgroup
before they can read any of it. What if they had 2400 bps? What if they
were paying huge long distance charges (and that's the whole reasont hey
read offline)!?!

For SHAME, Yogi!

And esp. since when I ran "atr2unix" on the thing, only about 20K of that
92K disk image was file data! Since it was an ATR, you could have at LEAST
ZIPped it! :)

From: sydtech@skypoint.com
Message-ID: <4keo5d$k7k@stratus.skypoint.net>
Source record: 84704

Can anyone point in the right direction? I'm looking for an A/B (or even 3-way) switch box for the Atari joystick port. I'd like to be able to switch between my standard Atari joystick, paddle controllers, and my modified Sega Genesis controller without putting all the wear and tear on my machines' joystick ports.

If anyone knows where I can buy such an item, please let me know.

Thanks...
Scott

I don't know about a switch box, but there used to be Y connectors that
would let you plug two joysticks or other devices into a port at the same
time. Such a connector would not be difficult to make.

>: bootable DOS disks for my Atari. Where do I go from here?

>: I have the Atari 8 bit users FAQ and did not find it very helpful
>: as what to do with .DCM files. :-(

You need three things:

1). Atari Peripheral Emulator (APE) version 1.07 available from
http://seka.nacs.net/~classic/ and register it...

2) An SIO2PC cable (instructions for construction are within the APE
documentation) costs about $25 to build, or are available from Steven
Tucker ($50, i think) at that same web page...

3) Diskcomm program for your atari 8 bit (available from most atari 8
bit BBS or umich.edu ftp/gopher site....

APE is a PC program (286+ & 200k free) DOS program that monitors the
SIO chain and uses the PC HD as storage by using ATR images (which is
similiar to the DCM you have (only different format). APE also
converts DCM to ATR files and at that point you should be able to
access the Sparta files.

The SIO2PC cable connects the SIO chain and the PC serial port by
making them electronically compatible...

An example setup is your Atari 8bit/TV is connected to an Atari 8 bit
drive which is connected to the SIO2PC cable which is connected to a
serial port on your PC setup. You can then transfer files from your PC
to your Atari and vice versa...

Hope this sheds a little light on your dilemma...

Actually, mouthsticks aren't inherently problematic--all lowercase is much
less offensive to net users than all uppercase. And you could consider
posting from a newer machine.

Perhaps this may clear it up.

The Hamilton, Burlington, Oakville, Atari Users Group Presents

The Beginners Guide to the Atari 800XL

Version .1

Transferring Files Between Computers

Transferring programs and data between computers can be very confusing
to new
users of the Atari 8-bit computers. When a person wants to send a
program or
file, this is refered to as "UPLOADING". When a person wants to receive a
program or file, this is referred to as "DOWNLOADING". To make sure one
receives
the entire file, with no errors, a programming device called a "protocol" was
developed. The first protocol used was called Xmodem. There are other
protocols
in use today such as Ymodem, SeaLink, Lmodem and Zmodem. Every online service
should have, as a basic minimum, Xmodem protocol. Zmodem has become very
popular for the MS-Dos world, but is currently not supported by the Atari
8-bit
computer. Many programs located on an online service can not be run "as is",
because they have been compressed.

An "ARC" file, or archive file, has an extender .ARC. This file has been
archived in a standard manner which was common to the MS-Dos world before
it was
replaced by PkZip. The reason a file is archived is to make the file shorter,

so it takes up less space on your disk, and it takes less time to transfer between computers. Another advantage is that an ARC file can contain a group of files, not just one. The Atari 8-bit programs required to ARC and UNARC files
are SuperUnarc version 2.3 and SuperArc version 2.0 by Robert Puff. There is also an excellent ARC program resident in the Sparta X cart by Fine Tooned Engineering. there are compatible versions of ARC for the Atari ST and MD-Dos computers.

What about .DCM files, you may ask? A .dcm extended file is a format unique to
the 8-bit Atari, which is used to convert entire disk images into files. To work with a .dcm file, you will need Discommunicator 3.2 by Robert Puff. The advantages to working with Discommunicator is that previously, there was no way
to transfer a file in non standard format. A program which used its own format
such as some games, could not be transferred over a modem. With Discommunicator,
this limitation has been overcome.

Files on a BBS with an .LZH or .ZIP extender cannot be dealt with by an Atari 8-bit computer at this time.

So, we see by the above that one must get the DCM file to the 8 bit Atari before one can Un Discomm it......get Discomm first, get the file and unpack it.

Hope this helps.

Willy

To the best of my knowledge, the only Atari store in the Memphis area
closed about 3 years ago. Try the MASH BBS at 901-278-1032. I think
they have merged with a SciFi board, but they still support the
32/16/8 bit Atari lines.

I'm trying to remember what this game was about. Was it a text adventure or action arcade adventure? What was the basic premise of the game?

Thanks.

/Kevin

2101. Re: Temple of Apshai?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-10 00:00:00 UTC
From: mgfrank@acsu.buffalo.edu
Message-ID: <4kgrf2$idh@azure.acsu.buffalo.edu>
Source record: 84626

Kevin Haley (khaley@nova.gmi.edu) asks about Temple of Apshai.

Temple of Apshai (by Automated Simulations/Epyx) is an overhead-view RPG in which you control a single character that wanders through an area killing monsters and collecting treasure. It's keyboard-controlled. You have a number of commands available to you, such as move 0 to 9 feet, turn left, turn right, turn around, attack, parry, thrust, shoot an arrow, shoot a magic arrow, talk to monsters, get treasure, apply a healing salve, and so on.

You have the usual stats (strength, intelligence, constitution etc.) and can choose from a small variety of swords and armor. In play, the stats you're most concerned with are hit points, fatigue, and weight carried; fighting for long periods, running, and carrying large loads make you tired.

The games using this basic engine were called the Dunjonquest games, and consisted of Temple of Apshai and its expansion modules Upper Reaches of Apshai and Curse of Ra, Hellfire Warrior (with an improved engine) and its expansion modules Danger in Drindisti and The Keys of Acheron, and the smaller, introductory-level games Datestones of Ryn and Morloc's Tower. (There was a similar Starquest series with a sci-fi theme, including Star Warrior and Rescue at Rigel.)

The game came with a few pages of backplot in the manual. The short version is that in the area in which the game took place there were two gods, Geb (good guy) and the insect god Apshai (bad guy). The Gebites and the Apshaians warred for a while. The Gebites won, and drove off the followers of Apshai. The Apshaians wandered around looking for a place to settle. A small boy fell into a hole and was injured, but was rescued by an insect servant of Apshai (or perhaps Apshai himself), who showed him an underground complex in which the Apshaians could live. The Apshaians built a thriving underground society. Eventually, they opened trade relations with the Gebites. The Gebite priests, over the years, grew fat and lazy and contented. The power of Apshai grew, and the Gebites came upon hard times. The Gebite priests ignored their pleas for help, satisfied with the tribute the Apshaians paid them. Years later, no doubt by the power of Geb, an earthquake destroyed the entrance to the underground dwelling of the Apshaians. The Gebite people grew prosperous once again. Eventually, the Gebites began to excavate the Apshaian temple in search of the riches of the Apshaians. Soon, however, work parties began disappearing. The power of Apshai was once again felt in the land as Gebite influence waned.

While all that doesn't have much to do with actual gameplay, it certainly sets the scene very nicely. :-)

The player explores the four levels of the Apshaian complex: the gardens, shops, mines, and finally the level holding the temple itself. The monsters include your usual undead baddies like ghouls, skeletons, and zombies, as well as the insect minions of Apshai, such as giant beetles, ants, mosquitos, the antmen, and so on.

Rather than including descriptions of the rooms within the game, as in a text adventure, each room was numbered. The player would look up the room number in the manual to get the description.

Example, level 2, room 9: The stone in the east wall only shows signs of workmanship. Racks of motheaten robes, wadmal grey in color, fill the interior of the room. Against the north wall stands a locked cedar cabinet and rack hung with the remains of more elaborate black and green robes. A pungent odor fills the air and the dust of the floor is undisturbed.

The game itself plays wonderfully. A minor annoyance is that you have to tote up the values of the treasures you collect yourself, based on a table in the manual, and enter how much money you have each time you play. The Hellfire Warrior (and, I believe, ToA Trilogy) engine rectified this and made it automatic. Next to Alternate Reality, the Temple of Apshai series is my favorite RPG. It's fun to play and has great atmosphere. It's certainly a game worth tracking down.

The graphics are schematic--it's like looking at an archaeological plan of a site with the player, monsters, and treasure chests superimposed. The sound effects are minimal but effective: the player's steps, the swish-thunk of a successful sword attack, the creaking of doors, and a dead-monster sound.

There were a few releases of the game. I have 32k and 48k versions which are basically the same, except the 48k version has more sound effects. I have a version in the older Epyx box: it's sturdy, and the top comes off completely ; i.e., you can actually store your disks, manual, and reference card in it. The cover has a nifty illustration of a man fighting two ants or antmen in rainbow colors. It was also released in the later, thinner style of Epyx box which opens from the top and which is quite useless for storage. The illustration on this box is much less attractive, and depicts a man fighting a dragon in a sort of "glowing lines" style.

Temple of Apshai, Upper Reaches of Apshai, and Curse of Ra were later released in a single package called the Temple of Apshai Trilogy. I don't have it in my collection now, but if I recall it had enhanced graphics and sound and kept track of your money automatically. Gateway to Apshai is a cartridge-based action-oriented game set in the Apshai universe.

The game was designed and written by Jeff Johnson, Jon Freeman, and J.W. Connelley.

That's probably way more than you wanted to know. :-)

2102. AUCTION: Atari XEGS, 400 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-10 00:00:00 UTC
From: summers@flop.ENGR.ORST.EDU
Message-ID: <4kgko6$cf6@engr.orst.edu>
Source record: 84627
Cross-posted to: rec.games.video.classic,alt.games.video.classic,rec.games.video.marketplace,comp.sys.atari.8bit

4/10/96 8:30 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $25 <min>
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 <min>
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

William Moeller (af332@freenet.hamilton.on.ca) wrote:

: The Hamilton, Burlington, Oakville, Atari Users Group Presents

: The Beginners Guide to the Atari 800XL

Cool! Competition for the Newusers / Emulator Help FAQ, eh? ;^)

: in use today such as Ymodem, SeaLink, Lmodem and Zmodem. Every online service
: should have, as a basic minimum, Xmodem protocol. Zmodem has become very
: popular for the MS-Dos world, but is currently not supported by the Atari
: 8-bit
: computer. Many programs located on an online service can not be run "as is",
: because they have been compressed.

Tsk tsk! Ice-T v.2.7 has z-modem download (and recovery) built right in!
And if you can't or don't want to use Ice-T 2.7 (it's a 128K program) then
you can use Atar-Z-Modem, a stand-alone Z-modem download program for the
Atari 8-bit!

: Files on a BBS with an .LZH or .ZIP extender cannot be dealt with by an Atari
: 8-bit computer at this time.

There's an "LZH" (or at least "LHA") uncompressor floating around (it wasn't
supposed to be though) which was being written by Bob Puff.

And there is an UnZIP program for the Atari 8-bit. I think it's just
called "unzip". It's been a while. :) One thing, it doesn't handle (last
I saw) the latest PKZIP style of zipping (which is like "2.0" or something).
There was an unzipper on this Unix machine with the same problem. Thankfully
it's been upgraded. :)

: So, we see by the above that one must get the DCM file to the 8 bit Atari
: before one can Un Discomm it......get Discomm first, get the file and
: unpack it.

Not if you have an SIO2PC setup. Or if you can easily extract the files
from within the disk image. Follow these steps:

dcm -> atr
atr -> separate files (if disk is Atari DOS 2.0 compatible)

There are three ways to convert a DCM to an ATR disk image, and about four
ways to extract files from within ATR disk images.

"dcm2atr" (pc/unix)
"dcm2dsk" (pc)
"ape"'s built-in conversion (pc)

and

"atr2unix" (pc/unix)
"s2pc" (pc)
"atarimg" (pc)
"atari vd editor" (mac)

:)

I BELIEVE http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html explains
most of this. I might not have all of it. :)

Temple of Apshai is a 'Rogue' like game. Basically AD&D in a more arcade type atmosphere. But it is not arcade-like in the sense of 'Gauntlet'. It is a little more relaxed. You must solve puzzles and collect objects and wealth. I can't recall if the levels changed every time, or if they were predetermined with random monsters. It's been awhile since I've seen it in action. Epyx released it as 'Temple of Apshai Trilogy'. I've got the disk version but can't say I've ever completed even the first part.

I've been monitoring this (off topic) conversation for a while now. I
AM a college professor (at least an adjunct professor) and I wouldn't
even bother trying to catch the plagurizers. My philosophy has always
been that I'll catch the cheater types on the exam. If they can buy
papers and copy homework and still pass my exams, then they've probably
already mastered the subject and are just in my class because their
degree requires it.

Source record: 84642

I'm not sure about this, but I think some of the games Atari re-released for use on the XEGS had some slight differences from their original disk counterpart, like maybe improved graphics or additional features. "One-on-One," for example, had a slow motion option (which made the game too painfully slow!).

The original (and best) version of "Frogger" was John Harris' disk version from Sierra On-Line. The Parker Bros. version seemed somewhat watered down in a few areas, plus it lacked one of the best features -- the background music.

Some friends and I have been working for a few months on a first-person 3D RPG for the PC. After seeing how well AR (my all-time favorite game) has maintained its popularity, and with the frequent requests for copies of the original, remakes, etc, we decided to try to track down the authors and get permission to do a PC remake. Can anyone put me in touch with Phil or anyone else related to the originals?

2127. AUCTION: Atari XEGS, 400 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-11 00:00:00 UTC
From: summers@flop.ENGR.ORST.EDU
Message-ID: <4kjuga$kds@engr.orst.edu>
Source record: 84648
Cross-posted to: rec.games.video.classic,alt.games.video.classic,rec.games.video.marketplace,comp.sys.atari.8bit

4/11/96 14:30 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $25 gozar
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 <min>
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

>
>Jason

If you are running an emulator, I am not sure why you would need a hardware schematic. Anyway, an 850 was a device that connected to the Atari SIO bus and that provided several serial ports (4?) and a Centronics parallel port.

The 850 had a clever method of getting its device driver loaded. It would sit on the bus listening to the Atari's attempts to boot from the floppy - and if it heard several failures, it would say "I'm a disk! Boot me!" and install its drivers. The downside of this was that if you had a disk, you had to install a special AUTORUN.SYS program on your boot floppy. You can imagine the fun involved if you planned to use AUTORUN.SYS for other uses. Fortunately, the bootstrap code was fairly short and easy to disassemble.

If your emulator provides you with access to Macintosh printers and to the Macintosh serial ports, you already have most of the functions that an 850 was used for.

From: newton@nactoc.nacto.lkg.dec.com
Message-ID: <4kl10q$dj6@nntpd.lkg.dec.com>
Source record: 84513

I just grabbed a copy of the Rainbow emulator from AOL, and realized why you are looking for an 850 schematic. All of the software you want to run is on your 8-bit Atari hardware, and you need something like an 850 interface or a SIO2PC cable in order to transfer it to the Mac.

The documentation for one of the PC Atari 800 emulators says that the SIO2PC cable "has been around for 4 years and is fairly well known in the Atari 8-bit community". This same emulator also includes the operating system image and BASIC image files that the Rainbow emulator requires.

The "more rainbow instructions" file says that you can get a copy of the PC emulator XFormer 2.5 at

http://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/Xf2/xf25.zip

Then it says to

1. Rename ATARIOSB.ROM to OP_SYSTEM
2. Rename ATARIBAS.ROM to OP_BASIC
3. Move these two files, plus DOS25.XFD and DEMOS1.XFD, into the Rainbow Demos folder.

I don't know why it's OK for the XFormer emulator to include the images when the Rainbow emulator leaves them out "due to copyright restrictions". Maybe it's because XFormer is freeware and Rainbow is shareware/commercial?

In any case, I have two Atari CPUs sitting in my closet, so I've contributed twice to the cost of OS, DOS, and BASIC development.

Good luck. At this late date, your chances of finding a new 850 are more or less NIL. Your best bet is probably to either (a) watch ads and garage sales for a used 850, or (b) acquire a SIO2PC cable and a DB25-to-Mac cable.

: Atari except for the basics.

<shudder> I'm sorry! :) I'm on a PC right now. Wish I weren't though! :)
(Anyone selling a Black Box and/or Amiga setup!? :))

: I downloaded an Atari emulator, and decided to start messing around with the
: Atari again. I also downloaded some Atari DOS files from the internet, and
: uncompressed them, but all I have now are .DCM files. I have been able to
: copy them to the Atari with out any problems, but how do I convert these
: into the DOS.SYS and DUP.SYS files?

Other folks have answered your question (get "DiskCommunicator"), but...

What you may want to do is get an SIO2PC setup. Are you familiar with it?
Since you're using the emulator some also, you can convert DCM disk images
into SIO2PC/APE/Xformer/etc.-compatible ATR disk images and use them on both
the emulator and the Atari (via SIO2PC or APE).

Good luck!

From The Unofficial Atari 8-bit New User, Emulator Help FAQ

>-- Getting Atari files to an IBM: --
>
> 1.How can I read Atari disks on my IBM?
> MyDOS-compatible SIO2PC disk images!
>
> You can use two modems (one on your PC and one on your Atari) to download files
> from your Atari 8-bit.
>

Can somebody please elaborate on this. I have an both an Atari with a
modem and an IBM with a modem. Thanks.

Glenn

I did, some time ago--I'd offer it to be people, but my 1050 doesn't work
anymore, and the copy protection was rather difficult.

I have the disk version of RoF and it has the introduction graphics, if that
is what you mean by presentation sequence.

Here is the small list generated so far. Keep posting any variations found!

Title Disk Enhancements Cart Enhancements
--- --- ---
Frogger background music
Gorf save score feature
Lode Runner ability to skip levels
One-On-One slow motion feature

Does the cartridge version of Lode Runner let you build your own levels like
the disk version?

2146. Atari 800/XL/XE Cartridge List update

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-12 00:00:00 UTC
From: krieg@earth.execpc.com
Message-ID: <4km53m$ij9@earth.alpha.net>
Source record: 84521

Keep those updates coming! A lot of stock numbers and release dates have
been added since last time. Boulderdash and other First Star carts have been
verified! Please take the time to check your collection and fill in any
holes! Also, more feedback on the rarity ratings is requested.

Classic Atari Cartridges for the 400/800/XL/XE computer

In later versions of Mydos, instead of AUTORUN.SYS the dos looks for
*.AR0, then *.AR1 ... *.AR9 (a disk should have no more than one file with
each number). This has two advantages: 1- you can automatically run up to
10 programs when the computer starts up; 2- you don't have to guess what
is the AUTORUN.SYS file on a particular disk.

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-12 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <4km6fb$291s@usenetw1.news.prodigy.com>
Source record: 84523

You CAN buy an 850 interface from B&C Computervisions as well as the PR connection, a substitute for the 850. The PR connection has only 1 or 2 serial ports though, which is as many as most people need. B&C's phone number is (408)986-9960. They still support the Atari 8bit quite well.

2149. Re: Floppy Drive

Newsgroup: comp.sys.atari.8bit

The advatage of having a true double density drive like the XF551 is that
software exists that allows a PC to read these disks in a PC drive. I
like the SIO2PC cable though the most.
Later.

>
The current version of Xformer is shareware. The older versions used the
Atari 800 rom images, which Atari released to the public in the translator
disks. I don't remember all the details, but there was some legal
brouhaha in which it was decided that the 400/800 rom images were okay,
but the XL roms were still protected by copyright. I think Darek Mihocka
wrote his own OS for later versions of the Xformer.

If the Atari has an RS-232 interface, you can use a null-modem cable
(remember that Atari 9-pin != IBM 9-pin). Or you could connect a phone
cable between the two modems (some modems won't work unless there is
voltage on the phone line).

To read and write Atari floppy disks (double density). I don't have a
working IBM PC system yet, so I'm not clear on all the details.

: I recently transfer my ED disks containing binary files to DD with MYdos
: (latest version) and it not run automatically the autorun.sys file, is
: it a bug?

Nope. Newer versionso of MyDOS support MULTIPLE 'autorun' files. You
simply give them the extender ".ARx" (where `x' is 0, 1, 2, etc.)

If you want to, say, run an RS232 handler, then screen handler enhancer
(like HYPER E:), then a BBS program you could name the files:

RS232.AR0
HYPERE.AR1
BBSLOGIN.AR2

rather than copying RS232.COM, HYPERE.COM and BBSLOGIN.COM all into one
big file (with the "/A"ppend option of the DOS [C]opy command).

That way, if you ever change your modem connection, you can use a different
RS232.COM file but not have to recomibe all three files.

Cool, huh!? Anyway, always start with "AR0" and get progressively bigger.
That gives you up to 10 programs to run before the DUP.SYS (or cartridge)
gets activated.

2154. XL Emulator:DOS Survey

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-12 00:00:00 UTC
From: Paul Weinhold <pwein@umich.edu>
Message-ID: <316EDA83.2073@umich.edu>
Source record: 84529

I just tried all three Atari 800 XL Emulators with three different DOS images on my PC. On my system (486-66), I could not get XL-IT011 or XF33DEMO to use MYD45D.ATR or SpartaDOS 32 ATR image files. The older XF25 emulator does read the MYD45D.ATR image file, but not a SpartaDOS image file.

Does anyone disagree with these results OR have any suggestions?

I will be interested to see your comments.

: : The Hamilton, Burlington, Oakville, Atari Users Group Presents

: : The Beginners Guide to the Atari 800XL

: Cool! Competition for the Newusers / Emulator Help FAQ, eh? ;^)

Ya, it just started.....it is more of a group of articles than answering questions per se.

: : in use today such as Ymodem, SeaLink, Lmodem and Zmodem. Every online service : : should have, as a basic minimum, Xmodem protocol. Zmodem has become very : : popular for the MS-Dos world, but is currently not supported by the Atari : : 8-bit : : computer. Many programs located on an online service can not be run "as is", : : because they have been compressed.

: Tsk tsk! Ice-T v.2.7 has z-modem download (and recovery) built right in!
: And if you can't or don't want to use Ice-T 2.7 (it's a 128K program) then
: you can use Atar-Z-Modem, a stand-alone Z-modem download program for the
: Atari 8-bit!

Well, I have to try it!

: : Files on a BBS with an .LZH or .ZIP extender cannot be dealt with by an Atari : : 8-bit computer at this time.

: There's an "LZH" (or at least "LHA") uncompressor floating around (it wasn't
: supposed to be though) which was being written by Bob Puff.

I have seen that thing.....very early attempt.....it sorta works....it is better to tell new users that they just cant do it rather than try to go through all the contortions of trying to tell them when and how and why pertaining to how it is sorta possible!...<grin>

: And there is an UnZIP program for the Atari 8-bit. I think it's just
: called "unzip". It's been a while. :) One thing, it doesn't handle (last
: I saw) the latest PKZIP style of zipping (which is like "2.0" or something).
: There was an unzipper on this Unix machine with the same problem. Thankfully
: it's been upgraded. :)

It doesnt do all unzipping.....ie it cant handle the latest style of zipping which is what is in use today. Don't want to confuse the sheep in my users group.

2163. AUCTION: Atari XEGS, 400 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-12 00:00:00 UTC
From: Benjamin Summers <summers@flop.ENGR.ORST.EDU>
Message-ID: <Pine.SUN.3.91.960412203838.8220D-100000@flop.ENGR.ORST.EDU>
Source record: 84538
Cross-posted to: rec.games.video.classic,alt.games.video.classic,rec.games.video.marketplace,comp.sys.atari.8bit

4/12/96 21:30 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $35 produnl2
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 <min>
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

?? There is nothing special in any XF551, it should work on any Atari]
8Bit computer. There are problems with older copy protected software that relied
on Disk timming for part of the protection. The XF551 runs, spins at 300 rpm verus
288 for the older 810 and 1050's. Off hand, I don't know which programs these are
but I think they are all games.

I agree. I tried to push myself to do this once or twice. Latest time was at the Goodwill. They had a TI99 system with a cart sticking out of the mouth of it. The cart was one I didn't have yet, but they wanted to sell the whole system together with the cart. Elsewhere in the store, they had eight other cart for the TI, no doubt carts that came in with the whole TI system and they no doubt randomly selected one to include with the system. I TRIED to convince myself it would be okay to take the cart and just buy IT at the same 25-cent price that Goodwill tended to charge, but I couldn't bring myself to do it. I brought it up to the counter and spelled it out for them...I wanted the cart, it was sticking in the mouth of the system, can I buy it for the price of the loose ones? They said no. I walked out bummed, but felt much clearer about it than if I'd kept my mouth shut. Today, I went into a DIFFERENT Goodwill and found a loose Spy Hunter laying about. The cart said "$5 for set" on it, but there was only one other cart next to it! However, twenty seconds of searching led me to another case full of pretty common games, all of them with the same "$5 for set" written on them. Elsewhere in the store, yet ANOTHER one was lying around from this "set". ARRRGH! They've never tried to sell them apart before. Anyway, I went up to the counter and asked how much it would be as a solo cart, and they agreed to sell it separately despite the fact that they saw the "set" label clearly on the cart. So, sometimes it works out okay for honesty, sometimes doesn't. But the hobby should never become SO obsessive that we're willing to bend our own set of scruples.

At the same time, I think scruples are very subjective. That's the whole reason why these games of "Scruples" are popular and fun...because people WILL react in different ways to different situations and think it's fine, and who's to say what the ultimate definition of morality is? Many people would think nothing of switching the cartridges, and in truth, probably nobody is harmed in the situation. Perhaps it doesn't feel right to _me_, but that doesn't mean that, in the cosmic scheme of things, it isn't "right". And I'm sure there are lines _I_ cross that other people would thumb their noses at too. What is right and wrong? If you give the McDonald's clerk $5 and they give you change for a ten, will you correct them? If you win a regular labeled Space Invaders cartridge in an auction and someone sends you the silver or red label version instead, will you tell them they sent you a more valuable version, or keep your mouth shut? Or apply the same question to

winning Tetris for $3 and receiving the Tengen version from a guy who doesn't know any better. And how about this one: finding Crazy Climber at a garage sale for fifty cents. Is it moral to take it from the guy knowing how much it goes for in certain circles? I know that this is certainly a line _I_ cross. But others might think it's immoral to buy a game that I know is worth far more.

I've got lots of packing up of items to do right now, but I always find these morality discussions to be real interesting, and I had to jump in. Bottom line is, I wouldn't cross the line mentioned in the situation above...I agree with Mike that I'd ask someone at the store for permission to buy it. But though that's _my_ personal code, I don't think Larry is so totally out in left field that I can judge his move as right or wrong, nor would I think it fair for someone to tell me I'm morally decrepit for buying cartridges at cheap prices at garage sales when I can find them.

Just my thoughts. Now, back to my regularly-scheduled e-mail catch-up and our regularly scheduled auction-postings...!

2168. Re: Floppy Drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-13 00:00:00 UTC
From: Russ.Gilbert@apk.wariat.org
Message-ID: <1996Apr13.004519.10349@wariat.UUCP>
Source record: 84541

(glenn talks about reading that a 360k floppy is advantageous on a pc
and also had some question about modem to modem transfers, pc<=>atari.
)
Glenn. I think the advantage of the 360k drive has to do with using
'util' or other read/write atari disks on pc programs. I don't think
there is any advantage to a 360k floppy using sio2pc/APE.
Second. The modem to modem transfers in the newbie FAQ. I think that
is simply a use two phone lines way. Also, if you leave your phone off
the hook for a while, the line goes dead. You can then possibly be
able to have one computer do a ata and the other a ato and get a
connection, just using the wires in your house. Don't use 850 Express
on the atari side, it won't allow a 'null' type connection. BobTerm is
suggested. And for pc to atari, atarzmodem is really great. And I
haven't tried Ice-T 2.7 yet, but it has zmodem also, at least one way.
Finally, in the other FAQ, the regular FAQ by M. Current, there is a
section on null modeming.
All the atari<->pc above is sorta moot as you seem to have decided on
doing sio2pc.

I dont know what you people are talking about. I once walked into a
Salvation army thrift store and got all of the following for $50:

TRS-80 Model 4
Apple //e enhanced w/Printer card and mouse card and 64K of Ram
Apple Duodisk dual floppy Drive
Apple //e Color Monitor
IBM PC Jr.
Tandy 1000 XE
Tandy Ext. Floppy drive for 1000 XE
AT&T PC 6300
AT&T Monochrome Monitor
About 8 or so composite monitors
3 Daisywheel Printers
Several Keyboards

2170. Award Winners Auction #1

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-13 00:00:00 UTC
From: David Wyn Davies <101502.651@CompuServe.COM>
Message-ID: <4kob72cbb1@mhadf.production.compuserve.com>
Source record: 84543

Here's a list of items available by auction.

Rules of this auction.

1. The auction will be open until midnight GMT on Sunday 28th April.
2. Buyer pays postage.
3. Goods will only be sent to the highest bidders once payment has been received.
4. Each bid should be in increments of 25p (50 cents).
5. All items have a minimum bid of 50p unless otherwise stated.
6. Payments should be made by cheques, bankers draft, International Money Order or cash. Careful with cash, though.
7. For cheque payments, please allow up to 7 days for clearance. Cheques only acceptable if drawn on UK bank accounts.
8. Sorry, but US collectors need to add $5 to the order value if sending cash to cover our own conversion costs. Other foreign nationals need to do something similar - please ask for rates.

Due to account problems with Compuserve, this is a re-running of a previous auction. The original bids placed still stand.

Current highest bids are at the right of each entry

Atari 2600 Cartridges

Adventure
Air-Sea Battle
Asteroids
Basic Programming & Keypads - boxed with inst. (min. bid £7.50)
Berzerk
Berzerk - not working.
Breakout (boxed with inst)
Centipede
Circus Atari (boxed with inst)
Combat
Commando
Cosmic Ark
Dodge 'Em
E.T.
Fishing Derby
Freeway
Gorf
Indy 500 & Driving Controllers (min. bid £6)
Kangeroo
Kung-Fu Master 50p (nmp20)

Kung-Fu Master (plain white label. Boxed with inst)

It just goes to show how widely the prices can vqry at thrift stores.
The places where I shop would usually charge $50 or more for any one of
those items, but if an item sits around unsold for a length of time they
might lower the price until someone buys it.

The author of Xformer asked Atari for permission to distribute ROMs. I guess the Rainbow author didn't want to, given the easy availability of ROMs.

Basically, you need to connect them to different phone lines, and have one
call the other and do an ordinary file transfer. Alternatively, you could
use a standard null modem cable and an 850 to do it without the phone lines.

2176. Atari Emulator Help

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-13 00:00:00 UTC
From: rascal <rascal@pixi.com>
Message-ID: <31701A83.2AA9@pixi.com>
Source record: 84549

Hi, folks. I was wondering if anyone could help me out. I'm REALLY interested in playing some old Atari 8Bit
games on my PC. And you guessed it: I need an emulator. First of all, I'd like to get a GOOD emulator but if
I can find one that won't cost me money, that's ideal. However, if I have to pay a little money for one
that's good, I'll do it. But first thing's first: I want to do this without spending dollars if at all
possible. I've tried searching the Web and I came across PC Xformer but I'm going to hold off on that unless
it comes down to having to order (i.e. pay) for the program.

I'm very excited to play Alternate Reality: The City ... I remember staying up LONG hours to play this one
back in, what, 1985 or 86? I'm getting starry eyed just thinking about it ...

Thanks.

Then I would suggest you talk to Bob Puff or Bob Woodly(sc). They both have
taken the UCode apart and made patches to it (720K, 3.5" upgrades). But, I must
confess, I can not think of anything that would need to be different from a Hardware
point of view.
If you find something I would appreciate the information. Personnaly, I'd be
changing the POKEY or PIA as they drive the SIO directly. The interface Drivers and
Receivers are different between the 1050 and the XF551.
This is going to 'Bug' me for weeks;

Rich Mier

2180. AUCTION: Atari XEGS, 400 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-13 00:00:00 UTC
From: Benjamin Summers <summers@flop.ENGR.ORST.EDU>
Message-ID: <Pine.SUN.3.91.960413203451.646K-100000@flop.ENGR.ORST.EDU>
Source record: 84553
Cross-posted to:
rec.games.video.marketplace,alt.games.video.classic,rec.games.video.classic,rec.games.video.atari,comp.sys.atari.8bit

4/13/96 20:30 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $35 produnl2
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 <min>
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

This would be good. I'll put the next version (probably 16. April) onto
the www-server. For a faster link I will use another place to store the
".zip" (2 MBit connection). I hope that his helps a bit.

Bye,
Markus

PS: Our WWW-server is down for this weekend.

2184. Lord of Karma

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-14 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <4kq0t4$lic@main.freenet.hamilton.on.ca>
Source record: 84459

Greetings! I was hoping someone here could help me out. I used to play a game on the Pet 2001 computer called Lord of Karma, a text adventure by Avalon Hill Micro Computer Games. I always wanted to play it when I eventually bought my own Atari computer in September 1982, but could never find it. I understand it was made for the 8 bit Atari. If someone here has a copy, I would be willing to mail a program in exchange for this game.

Please let me know.

Willy

MM>
MM> MyDOS 3.07 works well, but I don't want to use this version.

I believe that the "latest" version of MYDOS follows the "multi-mate" or "run-mate" or "auto-mate" format of MYDOS. MYDOS has recently been modified so that AUTORUN files would have an extender of <dot> 'A' 'R' <digit>, e.g. AUTORUN.AR1, AUTORUN.AR4. All of these "digit" autorun files are loaded "in sequence", so that you may have up to ten autoloading files. Just change the ".SYS" extender to ".AR0" or ".AR1" and everything will be fine. (I don't remember which versions use AUTORUN.SYS or AUTORUN.AR1 and whether or not an AUTOMATE.SYS file has to be present on the disk.) It was put there so that people need not append an "R:" modem handler and a RAMdisk handler and then decide at some later point that they need one but not the other. Keeping the load modules separate simplified the bookkeeping.

P.S. Weren't there any ".doc" files with your DOS ?

Well, I have never done it, but usually these things aren't any more
difficult than exchanging a 60 HZ power supply for a 50 HZ power supply and
then flipping a hardware switch somewhere on the unit.

2188. Multi-Boot menus - were they a world standard?

Newsgroup: comp.sys.atari.8bit

Anyone here a CCG collector? If so, I'm looking to trade cards (M:TG,
Shadowfist, Star Wars, Star Trek, Illuminati, and Jyhad) for the following
hardware:

floppy drives (any, XF551 preferred)
XEP80
hard drives & interfaces

I'm also interested in the following software:

SpartaDOS X
programming utilities/assemblers/compilers/etc

I'll consider anything 8-bit Atari-related, tho.

2192. Atari to PC null modem

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-14 00:00:00 UTC
From: meislerj@charm.net
Message-ID: <4krv25$oju@canton.charm.net>
Source record: 84467

I was trying to copy some files from my atari 800 to my PC to use via an emulator. However, I don't have an 850 interface to use. I realized that to use a null modem cable I needed an 850 interface. Is there anyway to really run a null modem cable directly from the Atari to the PC? Does anyone know what the pins are in the Atari SIO in order to make this kind of null modem cable? Or is this not possible for some reason?

Jan Meisler

2193. Reading Atari 800 disks on PC

Newsgroup: comp.sys.atari.8bit

From: meislerj@charm.net
Message-ID: <4krv9i$oju@canton.charm.net>
Source record: 84468

I'm trying to read Atari 800 disks on my Pentium. I can't seem to make it work. I've tried using atario21.arc, sr.arc, dskutil.arc, and myutil.zip. However, all of these seem to be for disks formatted with MYDOS, and I've formatted my computer with Atari DOS. Any other programs out there?

Jan Meisler

2194. Why doesn't Rainbow demo launch anymore?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-14 00:00:00 UTC
From: Tony Ramos <ramos.15@osu.edu>
Message-ID: <317160E0.32C3@osu.edu>
Source record: 84469

I recently downloaded v1.1 of Chris Lam's excellent Atari 8-bit emulator for the Mac (currently the best 8-bit emulator by far IMO), and ran it a few times, but for some reason it won't run anymore. When I double-click the icon, it zooms open, then immediately zooms closed again. No alert boxes about the OP_SYSTEM file or the monitor's color depth, nothing.

I did move the Speech contol panel and the Speech Manager into the system during this time, so I moved them back out again, but to no avail.

Has anyone else had this problem? I'm using a PowerMac 7100/80AV running System 7.5.

Or maybe this is a trick to make me pay for the full version.
Chris...? ;-)

Thanks for any help,
Tony R.

> but I think they are all games.

There's one game that comes to mind and that is Flight Simulator. It did a check during loading to see if the disk was an original. Because the XF551 is spinning at 300 and not 288 it threw everything off.

I'm still running the Rainbow demo on my 68k (Mac II with 50MHz 030) and
never encountered this problem. I would have the registered version by
now if I could only find a way to get a international money order. I
tried with my bank and post office, no luck. Anyone got any suggestions.

Tony, I have to agree with you on Rainbow being the best! I can't wait to
get the registered version so I can use it with Mac65 on my Mac. BTW,
have you tried doing a fresh re-install of Rainbow from the BinHex
download?

I suspect it may be an error to refer to _THE_ disk-based, or _THE_ cart-based, version of a program. I have _A_ disk-based copy of ROF, and it does NOT have the "intro" sequence (which I have, in fact, never seen). Obviously this is a DIFFERENT "disk-based version" than someone else's, who posted that his DOES have that intro.

The obvious explanation, which may not necessarily be the CORRECT or the ONLY one :-), is that there were "official" cart- and disk-based releases, PLUS very likely pirated pre-releases on disk, plus very likely post-release disk-copies of the cart. That makes at least four, maybe more, potentially different versions!

The SIO signals are at voltages of 0 to +5 volts, whereas a PC's RS232
port has voltages of -5 to +5. You need a circuit to convert these
voltages, such as an R-verter or SIO2PC.

Most of these programs require a double density disk, because a standard
PC-clone floppy disk controller cannot read single density.

mcn> to the PC? Does anyone know what the pins are in the Atari SIO in

I could tell you, but it's a waste of time.

mcn> order to make this kind of null modem cable? Or is this not possible

There *needs* to be some interfacing electronics. The SIO port has voltage
levels of 0V(gnd) & +5V, whilst an RS232 port has levels of -12V, 0V(gnd) and
+12V. So, as you can see, even if the correct pins existed, the RS232 level
signals could well do damage to the Atari. :-(

There are alternatives to the 850, though. Most notably the P:R:Connection,
which is still being made and sold.

I think this is in the FAQ. (But I haven't looked in a while so..)

Yes you need a serial port to do null modeming.
Yes if you don't care about speed, there is the MPP driver and
cable which runs through the joystick ports.
SIO2PC is the cable which allows direct file transfer to the IBM.
Used with APE, it is wonderful (although I don't have this yet).
(Read the Emulator FAQ for more)

No, the only way to use the SIO is through SIO2PC. PIO2PC (Joystick)
can be done also (slow) but to NULL MODEM you need the true serial port.
850/PR/MIO/BBox/AT8000 etc.

: yesh dude, same lame problems as in Xformer.. the bottom line is
: off screen and i need it so badlt bccuz it has all the stats in the
: game ;)) damn it

On XFormer, you can use Pageup/Pagedown (I think) to scroll the screen up and down. The reason this happens is because the Atari has better pixel resolution than the 320x200 mode that the emulators use. It's either that or live with a tiny 640x480 mode view but be able to see the overscanned stuff.

4/15/96 17:00 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $35 produnl2
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 zrocool376
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

I had Lord of Karma on cassette (actually it was one of those
multi-format tapes, which probably had the PET versions on it), but I
seriously doubt I could find it. And unless you have a tape player I guess it
wouldn't help much anyway. I'll take a look though. I can find Dunzhin on
tape, and possibly Dimension X (with the groovy loading music) though.

2213. Tony Ramos and Jan Meisler

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-15 00:00:00 UTC
From: Russ.Gilbert@apk.wariat.org
Message-ID: <1996Apr15.185337.8930@wariat.UUCP>
Source record: 84488

(Jan M. has problem with 'util' pc read/write Atari disks
and Tony R. has 'Rainbow' problem.)
I agree with the person who said try re-installing Rainbow.
It is possible it has gotten corrupted.
Jan M. wants to transfer stuff, mostly from Atari8 to
Pentium PC.
Jan. Probably safest is to make a null modem setup, for
which you need at least an 850, or P:R: connection or MIO or
Black Box. However, if you are adventurous, I have a sector
based PC Atari disk read/writer and companion A8 sector
based read/writer. These utilities are pre-alpha, ie. I
stopped working on them some time ago when they were just in
the stage I could use them. And you might get scrambled
FATs on your pc floppies if you don't exit the PC
read/writer normally, I think. Actually, I haven't figured
out what trashed my pc source file backup floppy. Probably
the most valuable floppy backup I have. I was able to
recover most of my source files. Anyways, to make a long
story finish pretty soon, I'll try sending you a uu of my
sector based utilities if you want. The pc program clearly
says USE AT YOUR OWN RISK.
The doc says format using a FRESH ds/dd floppy, or do a
thourough erase using electro magnets, on your 'transfer'
disk you are going to use. For some things, I forget which,
you have to format on the A8 using SpartaDOS. I plan on
using my programs when I set my A8 back up, and and pretty
confident that I shouldn't get scrambled FATs, but?
Finally, it is pre-pre-alpha, don't give it to anyone else.
But, what am I worried about, nobody has asked for it after
I have offered it a number of times.
Another thing. You said 800 disks formatted with Atari
DOS. You aren't trying to read/write single density disks
are you? I wouldn't even try my program with Enhanced
density, strictly for double density.
(P:R: connections and 850 are still available. Almost certainly from
B&C Computervisions and the 850 probably from American Technavision.)

2214. Imagic 1.00b: Anyone really want it?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-15 00:00:00 UTC
From: classics@nacs.net
Message-ID: <4kunpe$e5s@wariat.wariat.org>
Source record: 84489

Imagic is a Win95 app I wrote as an experiment w/ Delphi 32 that
can dynamically convert any image format to any other image format.

I.e. ATR<->DCM<->XFD

I've decided that I just dont have time to throughly test Imagic, so if any of
you out there want it to be released please let me know. It would pretty much
be use at your own risk at this point.

Any takers?

Steve

2215. Atari to PC null modem

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-15 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <31731ae3@pianosa.demon.co.uk>
Source record: 84490

Whilst reading the usual rubbish I find here, Jan Meisler wrote something
interesting to All about Atari to PC null modem:

Hello Jan,

JM> Do you know where I could get a hold of a P:R:Connection or how much
JM> they cost?

Sadly, I'm not really able to help on that front, being a UK resident, I don't
pay too much attention to USA-based supplier details. :-(

However, since there are several more knowledgeable people frequenting the
group, I'm sure you'll have your answer soon.

Bill? Will? Ben?

2218. Uploaded: Atari800-0.4.0.tar.gz

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-16 00:00:00 UTC
From: David Firth <david@signus.demon.co.uk>
Message-ID: <1996Apr16.180756.1888@signus.demon.co.uk>
Source record: 84409
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

I have just uploaded the latest version of this emulator for Unix/Linux,
DEC-Windows and the Amiga.

****
This version is compatible with Alternate Reality "The Dungeon"
but I haven't tried it on the others. No doubt someone will :-)
****

After it has been moved out of the /incoming directory (probably
tommorrow) it can be downloaded from the following location:-

ftp://ftp.demon.co.uk/pub/emulators/atari/Atari800-0.4.0.tar.gz

I know some people have been having problems downloading from this
site, so feel free to upload it somewhere more accessible in the
states etc. Demon have purchased a 45Mb T3 line to the states so
hopefully this will not be too much of a problem in the future -
I don't know when its available for use though.

Changes in 0.4.0

- Added MOTIF User Interface
- Support for DEC-Windows under VMS (Thanks to Chris F Chiesa)
- Removed dependency on 'ncycles' global variable.
- Support for direct access to serial port hardware - The emulator will
now run Alternate Reality "The Dungeon" (I haven't tried the others)
- Modified handling of XL/XE memory.
- Fixed the GTIA modes which broke after X Window shared memory support
was added in version 0.3.0
- Correction allowing Montezumas Revenge to work again.

Bye

The problem is that you've moved the Readme files and the demo looks for
them to make sure that people aren't re-distributing the program on its
own without the doc that tell you how and where to pay.

These files need to be around for Rainbow to work.

2223. For sale: Atari 800 accessories that didn't go the first time...

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-16 00:00:00 UTC
From: temp@leper.tamu.edu
Message-ID: <16APR199622313983@leper.tamu.edu>
Source record: 84414

I still have some items left in case anyone's interested...

Atari 410 Data cassette recorder -- Best offer over $10.00 + shipping
Atari 1050 Disk drive -- best offer over $10.00 + shipping
Misc connecting cables and an extra power supply...(they'll be included
with either item that goes first)
Miscellaneous cartridges...Centipede, Music Composer, Boulders and
Bombs, Qix, Basic, and Assembler Editor...these are for sale
altogether for $15.00 + shipping...(I can't sell them individually
because it would cost me more than the $2.50 each just in packaging and
the time it takes to go to UPS to ship them...)

If you're interested in any of this stuff, please send me e-mail...I
don't read this newsgroup on a regular basis...
Thanks to the folks that bought some of the stuff I had the first
time...also, those that e-mailed me about the stuff the first time will be
given preference this time...

Thanks!

Tiffany

>
>Gareth
>
Here in the US the elite pirates only dealt with files that would load
from DOS- no special menus needed - if the file was too big to fit, we
used a loader to load at $600 and relocate as needed. I realized it
was a lot more work than slapping it into a multi-boot menu, but it
was more of a thrill to do so. Most of the stuff I've gotten since
using the pc as a server in US is still in that form, and the overseas
stuff is the multi-boot.

Use APE 1.07 from Steven Tuckers homepage. There are also directions
on building a PC to Atari cable... indespensible!!! Also, if you have
Percom drives or some other 3rd part ones, forget about it. The cable
screws up the drives other than 810 and 1050 that I've used. My
percomms bite the dust when I plug the pc to it.

Hi !!!

I have the following computer;
P5 100, PNP BIOS with INTEL TRITON Cheap Set MB
and awe32 PNP
RUNNING wiN95

The problems are:
in DOS mODE i always have to load somekind of
INtel Pnp Manager or something.. I asked friends with
GUS Pnp and ENSONIQ Pnp and they do not have any managers.
Without the manager DISGNOSE does not init the card and gives
me an error. WHy ? How do i get rid of this manager ?

Even when i use teh manager the "DIGANOSE /I" in
autoexec.bat causes the computer to lock up. BUt if
i start DIAGNOSe in interactive mode and init the card this
way it works fine. what the hell is wrong ?

PLEASE HELP !!!!!!!!!!!!!!

Source record: 84495

Virtual Matrix (artem@voicenet.com) wrote:
: Hello !!

: I just dloaded XL-IT for DOS. Hmm.. I would say it
: is better than XFORMER !! but what really disappointed me is that
: fact that it does not support SOUND whatsoever :((Does anyone
: know the plans for it ? like when is it gonna be released with
: sound ? Also i am not hetting the whole ATARI screen on my screen,
: so why not to use SVGA VIDEO MODES ? 640x400x256 colors or
: 640x480x256 colors ?

: Artem

SVGA is not the best way to handle that because the ATARI isn't
capable filling the complete screen so there would be much unused
(black) space on the screen.
Why not do it like C64S using 360x240 VGA resolution?

Source record: 84497

Sorry for any inconvenience caused as there seemed to be
a misinterpretation of my last post regarding ADIR.EXE.

I said that the PC MSDOS program ADIR directoried and
extracted from Atari/MyDOS disks. What I meant was
disk images (XFD and ATR format) not Atari 5 1/4 disks.

I have also fixed a bug in ADIR and the new version,
along with other utilities (XFD2ATR, ROBC2ATR and
IMG2PATH) will be appearing on my new web page later this
week.

I will mail the URL once it happens.

2236. XFSIO - The Atari Shell

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-16 00:00:00 UTC
From: Lawrence Staveley <Lawrence@kwll.demon.co.uk>
Message-ID: <688935631wnr@kwll.demon.co.uk>
Source record: 84503

Check out the XFSIO hope page at:

http://www-insight-media.co.uk/idrun/

XFSIO is a shell with the following features:

Current Version: 1.03

XFSIO is a utility to manage atari disk image files that are stored on your PC.

Features of XFSIO are:

Functions with PC XFormer, the Atari 8-Bit Emulator, allowing:
BASIC On/Off toggle
800/XL O/S toggle
Sound On/Off toggle
Modem COM select
Joytsick toggle
Auto Disk Mounting
Provides File Information

Functions with SIO2PC allowing:
SIO2PC COM select
Audo Disk Mounting
Provides File Information

Functions with A.P.E. allowing:
Audo Disk Mounting
Provides File Information

File Information Options:
Comprehensive file selector box
CD-Rom Support
Auto start directory
Comments of up to 132 characters for each disk image, which are auto-displayed

Utility file type checking, meaning:
PC Xformer only loads.... .XFD and .ATR file types.
SIO2PC only loads........ .ATR files.
APE only loads........... .ATR and .PRO files.

Registration:

This product is fully uncrippled. I leave it up to you and your conscience. However,
if you wish a specific feature to be inplemented then an 'incentive' may be in order ;-))

NOTE! NOTE! NOTE! NOTE! NOTE! NOTE!
Version 1.05 is almost ready with

NOTE! NOTE! NOTE! NOTE! NOTE! NOTE!

*Added support for the PC XFormer Cable -X Commands.
*Added support for XLiT! The Atari XL Emulator MSDos port.
*Much improved comment editor.
*Added a search facility.

....plus quite a few more things......

Hello !

This is the announcement of XL-it! 0.12 ATARI XL/XE emulator for MS-DOS.

- Copyright
XL-It! is (c) 1996 by Markus Gietzen
XL-It! is free as long as it isn't used in a commercial matter.
I still have the right to forbid the use of the emulator at any
time.

- Features

o NEW Sound-Support (SoundBlaster, stereo were available)
o NEW 128 kB RAM
o NEW 800XL MMU or 130XE MMU
o NEW Build-in Monitor
o NEW Much faster than v0.11
o Player/Missiles with collisions
o GTIA-modes
o DLIs
o vertical and horizontal fine-scrolling
o Overscan, underscan and "normal"-scan supported
o Supports reading from 2 drives (normal 1050)
o .XFD and .ATR diskfiles

- How to obtain it:

You can get this release from this www-page which I setup for XL-it!:

"http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html"

The file is now available over a 2 MBIT-line for a faster transfer.

I hope you enjoy XL-it!,

Markus Gietzen

From: meislerj@charm.net
Message-ID: <4l2qu8$4lq@canton.charm.net>
Source record: 84417

Being new to the field of using my PC to emulate my Atari, I have three questions.

1) Aside from the general FAQ on this newsgroup, someone recently mentioned another newbie FAQ about emulation. Could someone please tell me where it might be located.

2) I've read a bit about disk images of Atari disks. One thing I haven't found is how to create disk images. Could someone please tell me that?

3) I have some Atari "full disk bootable" programs. Is there a way to run these on the PC via emulation? For instance, I bought a game called CrossFire. Is there some way to run that? I can't get a disk directory of the disk, even on the Atari.

Behind Jaggi Lines is the name of the pirated copy of Rescue on Fractilus. It's the file version that found its way to pirate BBSs long ago before the cartridge was even available. BTW, Ballblaster is the pirated file version of what became Ballblazer. Both these Lucasfilm games are great and the cartridge versions are a little better than the file versions. So if you like the pirated stuff, try to get the real thing. Real nice games.

From: JTKIRK@urp.edu.pe
Message-ID: <m0u9fBR-000O6uC@rcp.net.pe>
Source record: 84422

I need help! Urgent!
I had built the Buchholz 256K mod for my 800XL. I had connected it on my socketed machine, and the wires running to PIA pins 12-16 were merely inserted in the socket, pressed by the IC's pins. But sometimes the wires got loose, so this weekend I decided to take out the PIA, unsolder the socket, and then solder the wires under the socket. As I finished doing it and connected my machine, all I got was a BLUE screen - no boot, no nothing...
WHAT CAN I HAVE DONE WRONG? I've traced the connections with my multimeter and they _seem_ to be OK. I fear I could have damaged the PIA when I slightly tinned pins 12-16 - but anyway, those pins weren't used before...
Or could it be the keyboard? I had to detach it, and the edge of the flat cable was slightly damaged in the process of re-inserting it...
Please, if anyone has experienced this problem before and found out what it was, help me!
TIA

I have recently fitted a AWE32 PnP to my system and have the following
problem.

The Midi emulation works fine in Win95 and DOS and the 16 bit sound is
fine under Win95 but when I run the EF2000 flight sim under MS DOS mode
the sound effects are really naff, it sounds more like 8 bit sound and a
bit hissy as well. I get the same when I boot to MS DOS. Music sounds
clear with nobackground noise but the sound effects are bad quality.

When I run Diagnose all works fine until I have to press f10 to update
my config files where I get the message CSP.sys cannot be found. I
cannot find this file on my system.

I suspect I am only getting 8 bit sound from DOS games. Can anyone shed
any light on this please.

Regards
Dave

While in BASIC do a PEEK for location 43234.

PEEK(43234)

If you get a 96 then you have the BASIC B revision ROM. If you get a
return of 234 then you have the Revision C BASIC ROM.

If you have B get C!

Happy PEEKing!

Tom

Stumbled across this group and reminded me on my old Atari 400 (great computer in it's day). Anyway. In Early 80's had chip for a 400. Fit in slot and had a switch. Allowed cracked programs to run off disk. Well ,400 died about 4 years ago and found 800 but chip won't work in it. Have close to 500 programs (most better than todays Sega/Nintendo games) but no way to access.

Are there any chips availble out there? For Sale? Please post or E-Mail me @ keshler@dreamscape.com.

Well, I have a AWE32 (not the PnP) and I have a line in my config.sys like this:

DEVICE=C:\AWE32\CSP.SYS

it seems to load some kind of driver for the low level digital processing, but
not very sure about it. If I don't load it I get the same problem as you, mail
me for more information about the file.

>glennb@interport.net

Peek at location 43234 [$A8E2].
If you get 96 [$60] then you have Rev. B (ugh!)
If you get 234 [$EA] then you have Rev. C (Yay!)
If you get 162 [$A2] then you have Rev. A (okay.)

Revision A had some bugs that Atari thought they
would fix--but they screwed it up royally with
Rev. B even worse!!
If you have Rev. B and can't get Revision C ROM's
or a cartridge, then get Revision A. The bugs in
Rev. A are FAR better to live with than the ones
in Rev. B that will just kill any serious programming.
If you have a 130XE or 65XE - it *should* have Rev. C
ROMs. If you have an XL -- then it's more than likely
that you have Rev. B. There's a fix for Revision B
in the revised edition of Compute!'s "Mapping The Atari"
for the XL computers. Your BASIC will be in RAM using
that fix, so it's still better to get the C ROMs or
use the Rev. A cartridge. At least you won't be
crashing and crashing and crashing and ...

Btw, what's really stupid about the difference between
Rev. B (for Buggy) and Rev. C is something like 12 bytes!
I don't know who Atari gave the job to for fixing up Rev. A,
but they should have been fired.

2254. FS: More Atari items

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-18 00:00:00 UTC
From: Jim Lazarenko <jimbo@connect.ab.ca>
Message-ID: <31763DFB.7EFB@connect.ab.ca>
Source record: 84430

This is I guess my third post in about as many months, I originally stated by wanting to clean up my basement
(Yeah, like that happened). I have sold most of the original items, but at the same time I have recieved
spare Atari pieces from friends, and have done a little trading with a few people. This is the spare
equipment I currently have for sale or trade, all are clean and in working shape, but have no boxes or manuals
unless specified.

ï¿½ Atari 600XL with power adapter, but no other accessories
ï¿½ Atari 800XL alone (No accessories)
ï¿½ Atari 800XL with power adapter, RFU Cable
ï¿½ Atari 1200XL with BASIC cartridge, and power adapter
ï¿½ Atari 1050 Disk Drive complete with power adapter and connection cable
ï¿½ Atari XMM801 Printer with manual and AtariWriter software (unit has built in power adapter)
ï¿½ Atari SX212 Modem with power adapter

Plus these cartridges...
. Atari Writer
. Basic
. Centipede
. Defender
. Donkey Kong
. Donkey Kong Junior
. Eastern Front (1941)
. Final Legacy
. Missle Command
. Pac-Man
. Pole Position
. Realsports Football
. Robotron: 2084
. Star Raiders
. Tennis

Please let me know what you are offering for the equipment, and where you are located so that I may give you a
rough idea of shipping charges. If you are looking to trade, I am currently trying to add to my collections
of Intellivision, Hand Held games (Mattel or Coleco only), Atari Lynx carts, and XE Game System peripherals.

Steven Tucker (classics@nacs.net) wrote:
: Is there any program to turn off the internal SpartaDos disk cache?

: I am working w/ the new Spartados PC Mirror and I wont be able
: to implement native subdirectory or file support unless I can
: turn off its disk caching.

: Steve

Ok, this is the first I've heard of Sparta using a Cache.

I know several versions use sio routines that can cause havoc.
Try 3.3b it seems to do ok if that is a problem. Perhaps the cache was
part of the sparta LSIO (they just had to rewrite it to work faster with
the doublers argh.)

Anyhow, How are you simulating the Sector Map of the files in native mode?
How about the bitmap sectors (Free sector flags)?
Sounds like you have your hands full. It sounds tempting
to just make it look and act like a Dos 2 disk and save the
grief. (and miss all the fun of directories, bummer).

2256. New web page

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-18 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <31765C3C.68FB@rcp.co.uk>
Source record: 84432

My new web page is up:
http://www.netlink.co.uk/users/helix/atari8/

It has a suite of utilities for managing ATR and XFD
files (atari disk images). The executables provided
run on PC MSDOS systems although source is provided
for most of the utilities in C so it should be easy
to recompile them.

The utilities currently available are:
* XFD2ATR - Converts XFD images into ATR images

* ADIR - Directories the contents of XFD and ATR
images if they are AtariDOS/MyDOS. This utility
will also extract individual files (useful for
BBS and FTP sites)

* ROBC2DOS - Directories the contents of XFD and
ATR images containing RobC menus. This utility
will also extract individual menu items and
convert them to AtariDOS/MyDOS format.

* IMG2PATH - Directories the contents of XFD and
ATR images in SpartaDos format.

Ivan

Blue screen is normally a RAM problem but in this case I would guess
that when you unsoldered the PIA Socket, a foil (or more) was broken.

Jan Meisler (meislerj@charm.net) wrote:
: Being new to the field of using my PC to emulate my Atari, I have three
: questions.

: 1) Aside from the general FAQ on this newsgroup, someone recently
: mentioned another newbie FAQ about emulation. Could someone please tell me
: where it might be located.

Ummm, look in comp.sys.emulators.misc?

: 2) I've read a bit about disk images of Atari disks. One thing I
: haven't found is how to create disk images. Could someone please tell me
: that?

I think you need an actual atari 8bit (god imagine that) to make disk
images from your diskettes. If you want blank images just copy, rename and
format the ones you already have. If you have the 8bit program that makes
DCM images from diskettes, there is an MSDOS program to convert them to
emulator ATR images. This is in the FAQ isn't it?

: 3) I have some Atari "full disk bootable" programs. Is there a way to
: run these on the PC via emulation? For instance, I bought a game called
: CrossFire. Is there some way to run that? I can't get a disk directory
: of the disk, even on the Atari.

If there's copy protection on the diskette then you are pretty much screwed
as far as making an image of it, unless you are a hacker.

Have you seen the 4 CD-ROM sets from Activision that I found purely by accident. They come in pretty large boxes and all follow a theme. I found them at Kay Bee Toys & Toy Works as close out software but In never found them advertized anywhere. These are for the MS-DOS machines by the way.

Three of the 4 themes are SCI-FI, ADVENTURE and COMEDY. I forget what the fourth one is. I bought the ADVENTURE CD-ROM, but would like to get the COMEDY one. I have never seen it around here. Can anyone help?

Because if you're going to double up on pixels then why not use the
320 x 240 mode? It'll be faster with less video memory to write to.

Here's a list of items available by auction.

Rules of this auction.

1. The auction will be open until midnight GMT on Sunday 28th April.
2. Buyer pays postage.
3. Goods will only be sent to the highest bidders once payment has been received.
4. Each bid should be in increments of 25p (50 cents).
5. All items have a minimum bid of 50p unless otherwise stated.
6. Payments should be made by cheques, bankers draft, International Money Order or cash. Careful with cash, though.
7. For cheque payments, please allow up to 7 days for clearance. Cheques only acceptable if drawn on UK bank accounts.
8. Sorry, but US collectors need to add $5 to the order value if sending cash to cover our own conversion costs. Other foreign nationals need to do something similar - please ask for rates.

Due to account problems with Compuserve, this is a re-running of a previous auction. The original bids placed still stand.

Current highest bids are at the right of each entry

Atari 2600 Cartridges

Adventure
Air-Sea Battle
Asteroids
Basic Programming & Keypads - boxed with inst. (min. bid £7.50)
Berzerk
Berzerk - not working.
Breakout (boxed with inst)
Centipede
Circus Atari (boxed with inst)
Combat
Commando 1UKP (TheAntMan)
Cosmic Ark 1UKP (TheAntMan)
Dodge 'Em
E.T.
Fishing Derby 1UKP (TheAntMan)
Freeway
Gorf 1UKP (TheAntMan)
Indy 500 & Driving Controllers (min. bid £6)
Kangeroo
Kung-Fu Master 50p (nmp20)

Kung-Fu Master (plain white label. Boxed with inst)
Laser Blast 50p (nmp20)
Megamania 75p (nmp20)

Space Fury
```

Atari 8-bit (all cassettes unless otherwise specified. Can be tested prior to finalising deal)

Atari 800XL Computer. One key not working (weird).
Atari XC12 Tape Deck. No lid. Untested.
Atari 822 Thermal Printer - no PSU (min. bid £10)
Donkey Kong cart 1UKP (nmp20)
MidiMaster
180
An Invitation to Programming
Atari Computing cassette-based mag issue 9
Bubble Trouble
Colony
Dizzy Dice
Draconus

EMI Soccer
Gridrunner
Hacker
IQ
Jocky Wilson's Darts
LA Swat
League Challenge
Milk Race
Molecule Man
Plastron
Power Down
Preppie
Red Max
Slinky
Spiky Harold
Storm8
Submarine Commander
Tanium
Transmuter
Universal Hero

Commodore 16 cassettes

An Introduction to Basic - Part 1 (2 tapes)
Mr Puniverse
Rockman
Rolf Harris Picture Builder/Chess
Squirm

Other Bits'n'Pieces

40Mb IDE Hard Disk (Conner)
360K 5.25" Drive Mechanism. Untested.
Atari 520ST-FM (Upgraded to 1Mb. Min. bid - £40)
Atari ST Internals Book (Min. bid. £4)
First Steps in 68000 Assembly Language Programming Book (Min. Bid £4)
STOS Basic (Complete. Min Bid £5)
STOS Compiler (Complete. Min Bid £5)
STOS Game Maker's Manual (Book. Min Bid £5)
VESA Multi I/O Card. Not working properly.

Hmmmmm..... CSP.SYS is simply the driver to activate the CSP chip on the card.
Basically used for on the fly digital recording compression. I suspect that
games that do not sound like they are in 16 bit, may only support 8 bit. Try
a game like Duke Nukem 3d or Rise of the Triad, I know both support 16 bit
audio.

Grim.

I don't think you understand, I am the Grim Reaper.

Umm - that defeats the purpose! :) The best you'll get is up to 40
overscanned rows, but still absolutely no left/right overscanning.

Well, actually, I guess that's good enough for the person who started this
thread - they were complaining about the Atari screen being too 'high'.

Rainbow in Large mode (at least on older versions) actually did 1.5x pixels.
It was really ugly. :)

: This sounds like a *great* development, considering it's getting
: increasingly hard to find a good composite monitor. Do you know anything
: more about the company and/or the product, Tom?

Here is the scoop...

Right now it is possible to hookup your Atari 8-bit to a 15.75 Khz
horizontal scan rate RGB monitor like the Commodore 1084 with the Harmonic
Research VC101A NTSC to RGB video decoder for $239.95.

This box will accept NTSC composite, and S-Video. S-Video is what the 800,
130XE, and modified 600XL/800XL/1200XL have. (Still need the two RCA plugs
to 4-pin mini pin DIN connector).

This same company is soon releasing a scan doubled version which will
allow composite video and S-Video inputs with outputs to SVGA 31.5 Khz
monitors!!

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.
```

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, public domain software/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

More BRIEF Definitions

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware - protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

>===>> Much of what is popularly referred to as PD is really Freeware!

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine, published by Robert Boardman and Howard E. Carson; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this

list, please do your part in keeping it useful for everyone!

Since someone else didn't bother, I will.
You can find it at:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

This is Bill Kendrick's "New Breed Software" site.
You can find the "Unofficial Atari 8-Bit New User, Emulator
Help FAQ" there along with other fine things for your
real or emulated Atari.

As to your other question regarding copy-protected disk
images and your emulator-- No, you don't need to be a
hacker. While you're at the site listed above, check for
links to other Atari related sites and keep an eye out
for A.P.E. (Atari Peripheral Emulator). You use this
along with SIO2PC. As I understand it, there is a provision
for loading copy-protected disk images with this to your
PC's hard drive. Since you use A.P.E. with your REAL
Atari along with SIO2PC, it's obvious that the ATR file
format will be capable of use by the 8-bit emulator running
on your PC.

Aha! Just browsing through my notes here, I find that you
can FTP/Gopher A.P.E. at:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Ape

I hope this will help you out. I may talk a lot, but I
try to include some useful info with my responses, rather
than just blathering like some other people. :-)
But then, I *could* be wrong, since I don't use any of
the stuff mentioned above . ;-)

Uncle Fester
* semi-hacker *

: Hi !!!
:
: I have the following computer;
: P5 100, PNP BIOS with INTEL TRITON Cheap Set MB
: and awe32 PNP
: RUNNING wiN95
:
: The problems are:
: in DOS mODE i always have to load somekind of
: INtel Pnp Manager or something.. I asked friends with
: GUS Pnp and ENSONIQ Pnp and they do not have any managers.
: Without the manager DISGNOSE does not init the card and gives
: me an error. WHy ? How do i get rid of this manager ?
:
: Even when i use teh manager the "DIGANOSE /I" in
: autoexec.bat causes the computer to lock up. BUt if
: i start DIAGNOSe in interactive mode and init the card this
: way it works fine. what the hell is wrong ?
:
: PLEASE HELP !!!!!!!!!!!!!!
:
: ARtem
:

Hey! This is comp.sys.atari.8bit! This group is for topics related to
the Atari 400/800, XL, XLD, XE series computers with the 6502 & 65816
processors. We have built-in sound, and don't use or need
SoundBlasters. THIS IS NOT AN IBM GROUP.

2272. Procedure for saving to program recorder on XE ?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-19 00:00:00 UTC
From: froygif@infonet.no
Message-ID: <4l7crb$nc6@relay.eunet.no>
Source record: 84448

Does anybody know the correct procedure for saving to a cassette
program recorder on an Atari XE Games Console?
I write 'csave', wait for the two beeps, hit play+record on the
recorder - the recorder starts, but when I hit return the record light
goes on but it just stops running.
Am I doing something wrong?

2274. Snowfite and Snowfite 2 posting.

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-19 00:00:00 UTC
From: "Ronald A. Laski, Jr." <rlaski@midwest.net>
Message-ID: <31774A13.1ECA@midwest.net>
Source record: 84450

I posted Snowfite and Snowfite2 to the alt.binaries.warez.atari (not atari8bit) It was the only msg in the news group. I am using Netscape 2.01 and was able to access that particular group by adding a new News server to the news reader. Is was called: 205.217.132.2
It supposedly subscribes to over 24000 groups. I ran into a problem trying to get the file attached to a message through Netscape. I finally UUencoded it before I attached it and it seems to work. I am going to look up the old msgs I got before and send it out to the people who requested it. If anyone else wants it and can't get to the 'warez' group. Write me and I'll send it.

2275. Telnet

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-19 00:00:00 UTC
From: John Haines <john_haines@pointless.gen.nz>
Message-ID: <60419231209$6FC8@pointless.gen.nz>
Source record: 84451

Hi Guys (and Girls) - I tried what Tom Hunt said regarding Telnetting to lynx.cc.ukans.edu if you using your Atari 8-bit.. - Just thought it may be worth mentioning that when you get the choices of 'www' or 'lynx' or 'linemode' that you choose the 'linemode' option as the others use IBM character codes, Flickerterm and ICET Terminal proggies will NOT handle some of the commands properly, whereas the 'linenode' feature treats you as you in straight ascii...

Sorry I can't give you any more info, but as of this msg that's as far as I've got <grin>...

Cheers - John...

Sounds GREAT! I think I'll run right out and spend $240 so that I can hook my $40 computer up to my SVGA monitor!

NOT! :-)

Thanks for the info anyway. Maybe someone with more money than they know what to do with will find it useful.

Sincerely,
- Byron Followell

2279. C64 Multithreaded OS announce

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-19 00:00:00 UTC
From: fachat@physik.tu-chemnitz.de
Message-ID: <4l879b$gqi@narses.hrz.tu-chemnitz.de>
Source record: 84455
Cross-posted to: comp.sys.cbm,comp.emulators.cbm,comp.os.misc,comp.sys.apple2,comp.sys.atari.8bit,de.comp.os.misc

Well, after having no response at all for my last announcement
I think that our news-server has lost it...

I have now ported my CS/A65 Multitasking operating system to the C64!

The concept for this computer is based on the Multithreading concept
(as opposed to the original version, which was a kind of Virtual
machine concept).

Some of it's features are:

- preemptive Multithreading

- Filesystems for CBM disk drives and IBM PC floppies (well, you need
a special hardware device for the latter)

- multiple consoles

- a shell with piping and I/O redirection

- monitor program with assembler/disassembler and many more advanced features.

last but not least
- Microkernel design, easily portable to other architectures.

You can find it on this page:

http://www.tu-chemnitz.de/~fachat/csa/index.html

so long
Andre

HEY! This is comp.sys.sinclair! This group is for topics related to the
computers and other hardware created by Sir Clive Sinclair (ZX80, ZX81,
ZX Spectrum, QL etc.) We also have built in and emulated sound and also do
not need steenkeen' Soundblasters! THIS IS NOT AN IBM OR ATARI GROUP!

In other words, please remove comp.sys.sinclair from the newsgroup heading
in followup posts. Thank you.

2290. AUCTION: Atari XEGS, 400 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-19 00:00:00 UTC
From: Benjamin Summers <summers@flop.ENGR.ORST.EDU>
Message-ID: <Pine.SUN.3.91.960419183606.11460F-100000@flop.ENGR.ORST.EDU>
Source record: 84566
Cross-posted to:
rec.games.video.classic,alt.games.video.classic,rec.games.video.marketplace,rec.games.video.atari,comp.sys.atari.8bit

4/19/96 18:00 PDT

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $35 produnl2
Includes Atari Light Gun, one CX40 joystick,
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $10 zrocool376
Includes one CX40 joystick, power supply,
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

2291. Source for switch boxes (TV/Atari)

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-19 00:00:00 UTC
From: temp@leper.tamu.edu
Message-ID: <19APR199620412606@leper.tamu.edu>
Source record: 84567

I remember reading a while back that some folks were looking for
switch boxes to switch between the Atari and the TV...I found a catalog
that seems to have these, though I'm not sure if they're the right ones or
not...the catalog says:

Atari computer game switch box:
select "TV" or "Computer". 300 ohm impedance. NEW, $1.50 ea

The catalog number is 52-90. If anyone wants to order this, the name
of the company is Fair Radio Sales...they're located in Lima, OH. The
number is (419) 223-2196, (419) 227-6573, and (419) 227-1313 (fax)
I have no affiliation with these people whatsoever and stand to gain
nothing from them monitarily or otherwise...just thought folks might want
to know about this in case they need the box...(BTW, I've dealt with them
before and they can tend to be rather short and rude on the phone so be
ready for it...:-))
Have fun...

Tiffany

You can create new blank ATR images w/ APE. Get APE @
http://www.nacs.net/~classics. Ape can also convert DCM images into ATR
images as well.

A new Win95 utility called Imagic can create Atr/Xfd images, and also
do universal image conversion, including creating DCM images.

>: 3) I have some Atari "full disk bootable" programs. Is there a way to

>: of the disk, even on the Atari.

>If there's copy protection on the diskette then you are pretty much screwed
>as far as making an image of it, unless you are a hacker.

Ape's ProSystem can create disk images of even the most heavily copy protected
disks. Get the prosys, as well as APE at the URL listed above.

Enjoy.

Steve

Does anyone have a EPYX 500xj joystick?
These joysticks were made by Konix.
It was the type that sat in the palm of your hand.
If anyone has information please E-mail me.
Thank.

------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

2302. Hardware for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-20 00:00:00 UTC
From: Diane Poremsky <poremsky@tricon.net>
Message-ID: <01bb2ef9.94c39280$1f50e6cd@poremsky>
Source record: 84578

I have the following items for sale. Please email me with an offer.
Include postage/shipping allowance in offer.

65xe w/upgraded memory (= to 130xe)
800xl
1050 drive
1010 program recorder

All of the above are in working order and include cables and power supply

1020 printer -- does not work, includes power supply, which is OK & cable
1050 drive -- does not work, chip/circuit problem as drive mechanics
works. Includes power supply & cable.

ComputerEyes includes magniprint software
Animation station drawing pad & software
light pen & cartridge
Keypad & Bookkeeper software
AtariLabs light module & temp module. Not sure what all came with them or
if I have anything other than the carts at this time.

I also have a Star NX-1000 printer (9 pin, not the color model) w/ extra
ribbons (several colors and iron-on ink)

2303. SIOCOPY (does it work?)

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-20 00:00:00 UTC
From: areeve@avana.net
Message-ID: <31796b3e.231620@news.avana.net>
Source record: 84579

Well, I tried SIOCOPY today constructing the cable and all it does
is indicate that it is calibrating and this I gather from the source
code that it tries a status command and print that my disk drive is
either off or not attached. Has anybody gotten this utility to work? I
am aware that this is a beta and the author no longer intends to spend
time working with it, but if it doesn't work then why is it available
for me to spend my time achieving nothing on? I tried this on a
386/40, 486/100, and 586/60 so I tested it on a few machine. Please
note that I'm not upset as the author clearly states that it may only
work on his computer...I'm just wondering why this is in the channel.

What are the realistic minimum requirements for Rainbow anway? I've tried to
run it on a Mac IIci 68030/25 with 32MB or ram, and it hardly moves at all.

The decoder chips are not cheap. After all you are taking composite and converting it to RGB.

There are kits available for around $75 or less (not from Harmonic Research), which will do the same thing.

Tom

Thanks for information. It looks like a great design.
No more trying to hold the joystick to the table.

2309. ACE: Atari Computer Emulator (v0.01 released)

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-21 00:00:00 UTC
From: feb6399@osfmail.isc.rit.edu
Message-ID: <4lcjkf$8k6@news.isc.rit.edu>
Source record: 84585
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

Announcing:

Pre-release v0.01 of
ACE: the Atari Computer Emulator (800/XL/XE)

(including xace for X-Windows,
and vace for SVGA)

For those of you who have been on this newsgroup for a few years,
you may remember me, back in 1993, talking about my Atari Emulator,
and then I just disappeared, and it never got released.
Well, I ran out of time to work on it, and for the last two years,
I kept saying that some day I would work on it some more, but
that never happened. And then for the last year or so I kept
saying that I should just release it as is, so that people can at
least use what I've got so far, and use the source code as reference.
But that never happened either, because I always felt that I couldn't
possibly release it until I spent a lot of time cleaning up the code
and fixing bugs and finishing the changes I started that I never
completed.

The same thing happens with everything I write. I spend a lot of time
to make sure the code is useful to a lot of people besides myself,
but then I'm too much of a perfectionist when it comes to my own code,
so I never release any of it, because it never seems finished enough.
As a result, no one else ever gets to see or use anything I've ever
written.

So, tonight I finally decided to change that trend.
I took a few hours away from my busy schedule (working on my
Master's Thesis) and got out the old sources from two years ago,
made sure they could compile, fixed up a few small problems,
and packaged them up into a gzip'ed tar file, and a .ZIP file.

For those that don't remember the discussion from before,
this is an 800/XL/XE emulator, including support for SIO
devices, P/M graphics, collision detection, DLI's, etc...

It runs under X-windows, or SVGAlib (for Linux), or in text-only mode
(for everything else)

It also includes support for PSIO (Parallel SIO) which allows hooking
up Atari SIO devices (disk drives, or the Atari computer itself) to
a PC parallel port.

It supports .XFD and .ATR disk files, as well as an extension of the .ATR
format I was working on that kept track of bad sector information.
It can directly get the directories and copy files from those disks
as well, without emulating an Atari first, and also has some
(incomplete) support for easy keyboard remapping. It has a built-in
6502 debugger/monitor from which the emulator is run, as well.

Currently, the only place to get this software is from
my web-page, at:
http://www.csh.rit.edu/~shaggy
or, to get straight to the software page:
http://www.csh.rit.edu/~shaggy/software.html

If someone wants to transfer a copy over to umich or to
some other site, that's fine by me.

- Frank

Exactly. But as I said the cassette recorder just stops when I do
this, so I guess there must be something wrong with it:(

Here's a list of items available by auction.

Rules of this auction.

1. The auction will be open until midnight GMT on Sunday 28th April.
2. Buyer pays postage.
3. Goods will only be sent to the highest bidders once payment has been received.
4. Each bid should be in increments of 25p (50 cents).
5. All items have a minimum bid of 50p unless otherwise stated.
6. Payments should be made by cheques, bankers draft, International Money Order or cash. Careful with cash, though.
7. For cheque payments, please allow up to 7 days for clearance. Cheques only acceptable if drawn on UK bank accounts.
8. Sorry, but US collectors need to add $5 to the order value if sending cash to cover our own conversion costs. Other foreign nationals need to do something similar - please ask for rates.

Due to account problems with Compuserve, this is a re-running of a previous auction. The original bids placed still stand.

Current highest bids are at the right of each entry

> Cheers - John...

I don't know if you tried this, but when asked, I specified "ansi" as
my terminal type. At 14.4k baud my term80 handles it ok, except for
the menu re-highlighting. Also, that lynx server uses the ansi code
for "delete to end of line", which I'll add, also. This is the first
instance I've come across the need for it. I'm working on an update
to add that feature, in-between my 12-14 hr "day job".

2314. Email

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-21 00:00:00 UTC
From: tomhunt@bright.net
Message-ID: <3179c3a3.1387130@news.bright.net>
Source record: 84590

I've just found a way of accessing email from a non-slip/ppp ISP.
(These types of isp's do not offer shell accounts). If you can access
the TELNET command after logging in, try this-

TELNET <domain.name.net><sp><25>
HELO <(your)domain.name.net>
MAIL FROM: <yourname@domain.name.net>
RCPT TO: <receiver@domain.name.net>
DATA
<Message text goes here.>
. (ends message)
RSET
QUIT

The above scenario connects to your isp's port 25, and allows you to
send email. Leave out the various <> and () characters, which I added
for clarity. Does anybody know of a way to receive email in a similar
fashion?

There is also a way to post to newsgroups by connecting to your isp's
port 119. But that's a topic for some other day.

But, as more and more isp's refuse to offer shell accounts, methods
like this will have to be used to allow various classic computers
internet access. If anyone knows of any similar techniques which
allows the creative use of TELNET to be used as a substitute for a
full-blown shell account, PLEASE POST THEM. In so doing you will be
doing a great service to the atari 8bit user community. Thanks.

2315. Lynx Servers

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-21 00:00:00 UTC
From: tomhunt@bright.net
Message-ID: <3179ca9f.3155331@news.bright.net>
Source record: 84591

I managed to do some more work in researching the topic of accessing the internet with the atari 8bit. My friend Bill Core (Pakrat) shared with me a new lynx site- panda.uiowa.edu (128.255.200.2). I've called it a few times, and it's my opinion that it's much better than lynx.cc.ukans.edu. I say this because it doesn't use the control sequence to delete to the end of the line. Instead it simply uses spaces, which works much better when using term80 on the atari 8bit.

Panda offers a lynx type host interface, which you can easily use (if using an ansi terminal program) by specifying "ansi" as your terminal type. It displays menus that have numbered items, that you can select by one of two ways. One way is to use your cursor keys, then press the return key. Another way is to just type in the menu item number and press return.

What does Panda offer? Lots! You can access newsgroups, news (international press), government information, libraries, and atari 8bit files to download. Yes, you can use the MERIT system to access the atari 8bit files on wustl.edu, which mirrors umich.edu. To select a file to download, just select the line it's on with your cursor keys, and type in "download".

If any atari 8bit owner wants to access the internet, but his ISP only offers slip/ppp, all is not lost because such ISP's usually offer TELNET, which you can use to access lynx servers such as Panda.

All this information, and more will be in my forthcoming article "Accessing The Internet With The Atari 8bit". I'm working on it in my spare time, which is kind of sparse right now, working 70+ hour weeks.

2316. Archive

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-21 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <317a4959.621035@news.superlink.net>
Source record: 84592

Updating the search for programs for the archive.
So far, I've located and received about 400 titles. That's not too shabby for two weeks work. Also, I've had to re-crack several titles so they will run w/o the protection. (Yes, I know APE will emulate the protection, but I needed something to do.)
Anyone interested in a list of what I have so far, please email me. If anyone can help with something they have, would much appreciate it.
Thanks all.

2318. Problem with Happy 810 drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-21 00:00:00 UTC
From: Bill Somrak <cooncat@ncweb.com>
Message-ID: <317A173A.4E8A@ncweb.com>
Source record: 84594

Hi again,

Hope someone has come across this problem and can point me in the
right direction.

I have an old Happy Enhanced 810 floppy drive. If I try to access it,
it responds, but that's as far as I get. If I try to format a disk in
it, it will start the operation normally, and when it gets all the way
to track 39, it sort of just hangs there. Sometimes it will then go all
the way back to track zero and try again, but it always hangs at track
39.

I tried replacing the transistor gate array chip (CA3086), as will as
the LM311 op amp chip. I check all the plug connections, and reseated
all the socketted chips. Checked the power supply for proper voltage.

Everything mentioned looks okay. Anyone seen this before and have a
solution????

TIA ... Bill

Last time I tried using a TV with A/V inputs, the output was
crummy (tho not as bad as RF switchbox output!). The advantage of this
$240 device seems to be that you get true separate (luma/chroma) output,
with its superior sharpness and color saturation.

Have you tried printing to the line printer device before doing the CSAVE? I remember there was a bug with the SIO routines and the cassette recorder that could be worked around by doing a print. I'm not sure if it is the one which you describe, though. Good luck!

: : double up on hi-res pixels?

: Umm - that defeats the purpose! :) The best you'll get is up to 40
: overscanned rows, but still absolutely no left/right overscanning.

I don't like the idea of 640x480 at all.
If I double-scan the whole screen, the emulator will slow-down by a
factor of 2 ! (this is a guess, maybe a bit less maybe more).

There is a way to setup 352x240 pixels on every VGA. But I have to
browse my resources to find it again. I try to add 320x240 as soon
as possible to get some games playable. (I hate it if I can't
see my score ;-)

2333. Pinouts for Teknika MJ-22 monitor?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-22 00:00:00 UTC
From: alexc@3rdplanet.com
Message-ID: <alexc-2204960035550001@news.3rdplanet.com>
Source record: 84363

Does anybody know the pinouts for the RGB connector on a Teknika MJ-22
monitor? I'd like to hook up my ST and my 1200XL to it at the same
time--it has a handy switch on the front especially for the purpose.

The RGB jack is a female 8-pin DIN--I think it's a pretty standard type,
also found on some Commodore monitors of the same era.

Y'all are my last hope... first person to reply gets my firstborn son... 8-)

2334. Award Winners Auction Update #4

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-22 00:00:00 UTC
From: David Wyn Davies <101502.651@CompuServe.COM>
Message-ID: <4lgi5upce1@mhadf.production.compuserve.com>
Source record: 84364
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,rec.games.video.atari,rec.games.video.classic,rec.games.video.marketplace

Here's a list of items available by auction.

Rules of this auction.

1. The auction will be open until midnight GMT on Sunday 28th April.
2. Buyer pays postage.
3. Goods will only be sent to the highest bidders once payment has been received.
4. Each bid should be in increments of 25p (50 cents).
5. All items have a minimum bid of 50p unless otherwise stated.
6. Payments should be made by cheques, bankers draft, International Money Order or cash. Careful with cash, though.
7. For cheque payments, please allow up to 7 days for clearance. Cheques only acceptable if drawn on UK bank accounts.
8. Sorry, but US collectors need to add $5 to the order value if sending cash to cover our own conversion costs. Other foreign nationals need to do something similar - please ask for rates.

Due to account problems with Compuserve, this is a re-running of a previous auction. The original bids placed still stand.

Current highest bids are at the right of each entry

NOTE: See end of list for wants. Only highest bidders at the end of the auction will be allowed to trade instead.

Actually, it's Darek Mihocka... The latest version, I think, is 3.5, and other emulators are now available, including xl-it and ACE.

No chip here, but I'll go you one better, if you're interested.
I have an old Atari 400, already obsolete when I bought it new in 1982
for $99. It has a BASIC cartridge and an excellent chess cartridge.
(Endorsed by one of the big chess organizations.) It's gathering dust
as we speak, since I've had a Mac for four years. Like you, I still
have fond memories of it, and I can't bring myself to throw it away.
It has the standard 16K RAM, but I replaced the pressure-sensitive
keyboard with a typewriter-style one. Anyway, it's not doing me any
good, even though it has always worked perfectly. (I wish my Mac
crashed as little as the 400!) If you have a use for it, and would
like to take it off my hands, I'd be very amenable to making a deal.
I'm a newly married student facing student loan payments, so every
little bit helps.

I just mentioned to my wife yesterday about how I should wait until
it becomes a museum piece, but I'm not a fool. If you want to buy it,
let me know your offering price & I'll get right back to you.

Two things come to mind; 1. Have you cleaned the head?
2. Loosen and re-tighten the the screws that mount the side board onto
the drive frame (poor grounding, happens quite often on 810's). Not
just the one at the rear of the side board, this one doesn't ground
anything.

Hope this helps; Rich Mier

I am posting this message for a friend without Internet access.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. All opened disks
and CDROMs have been tested and I will guarantee they work.

Rather than post separate for sale messages for each computer as I have done
in the past, I thought I'd combine them into one large list so people could
see everything I have available. If you are interested in anything, please
read the end of the message before replying.

Items listed in this order:
Part 1. IBM CDROMs, disk-based games (many), old business software, books
Part 2. Commodore 64/128 game software (lots), datasette, 2 books
Part 3. Amiga 3.5" game software and book
Part 4. Apple II+/e business software, books, plug-in cards
Part 5. Atari ST and 8-bit software (no games)
Part 6. Macintosh 3.5" software (several games)
Part 7. TI-99/4A cartridges (several games/education), 1 book
Part 8. Computer books

Feel free to make reasonable offers on anything below. Few prices are firm,
especially if you are buying several other items.

=== Part 1. IBM ==========

IBM CDROM games (with manuals and jewel cases, no boxes):
Desert Strike - $12
Police Quest: Open Season - $13

IBM disk-based game software (5.25" unless noted otherwise):
$4 each

Don't Go Alone *

$5 each

Deja Vu II (VGA, 5.25" HD)
First Expedition
Scavengers of the Mutant World
Sword of the Samurai
Superstar Soccer (w/ C64 version) *
Willow - new, unopened

Zoom

$7 each

Eric the Unready (VGA, 3.5" HD) with cluebook

IBM ancient business software (all with 5.25" disks, manuals, and boxes):
Diskette Manager III (Lassen Software) - $4
Framework II Sampler (Ashton-Tate) - $4
PC Focus 3.0 (Information Builders) - contains User's Manual, Guide to
Operations, Tutorial, and Screen Painter manuals - $6
PFS: First Publisher 1.0 (PFS) - $4
Personal Time Manager (Prime Time) - $4
Professional Editor (IBM)- $4
Script/PC (IBM) - $4
Smarterm 100 (Persoft) - $4
TopView (IBM) - $4
TopView Programmer's Toolkit (IBM) - $4
Windows 286 2.1 (Microsoft) (package torn on top) - $6

Books:
DBase III Plus Handbook 2nd Edition - Chou, Que Books - $4
P-CAD Illustrated User's Guide: Printed Circuit Board Design
"048-0226-02 Rev 3.00 Kit Illustrated UG SW/MNL" -- still sealed - $10

=== Part 2. Commodore 64/128 (all 5.25" disks) ================================

$2.50 each

Deceptor
Desert Fox
Force 7
GEOS Desk Pack I *
Sky Runner

$3.50 each

Blue Angels
Die Hard
Oil Barons (heavy package)
Paperclip 64 *
Paperclip Spell Pack *
PHM Pegasus
Print Power (+Atari)
Top 20 Solid Gold (Cosmi) *
Top Fuel Eliminator
TV Sports Football
X-15 Alpha Mission

$4.50 each

Ace of Aces

Beyond Dark Castle *
Beyond Zork 128 *
Border Zone *
Bureaucracy 128 *
Defender of the Crown
Grave Yardage *
Kings of the Beach *
Millionaire *
Monopoly (Leisure Genius)
Murder by the Dozen *
Nord and Bert *
Pipe Dream *
Tomahawk

$5 each

Superstar Soccer (+IBM) *

Hardware:
Commodore 64/PET Datasette.....$7

Books:
Commodore 64 Programmer's Reference Guide (orig schematics missing)...$5
Commodore 64 User's Guide (2).....$3

=== Part 3. Amiga 3.5" disks ==========

$5 each

Jack Nicklaus' Golf *
Midwinter
Pioneer Plague *
Warlock
BOOK: Amiga Hardware Reference Manual (Revised) - Addision-Wesley, 1989

All 5 above - $25 delivered anywhere in the continental United States.

=== Part 4. Apple II+/e (all 5.25" disks) ==========

Following is a list of Apple software and hardware I no longer have any use
for. Feel free to make reasonable offers.

DISKS ONLY only for almost every PFS:File, PFS:Graph, PFS:Write, etc -
50 cents ea. disk - can provide a complete list if interested
One game: Ultima II (Origin), missing the top half of the box - $1.50

Tons of Beagle Brothers Time-Out disks and manuals (no boxes) - DeskTools,
DeskTools II, Filemaster, Graph, MacroTools, MacroTools II, PowerPack,
Quickspell, Report Writer, Sidespread, SpreadTools, Superfonts, Thesaurus,
Ultramacros, Super Macroworks. If anyone is seriously interested in buying
the WHOLE LOT, please respond with your offer.

BOOK: Osborne CP/M User Guide "Special Microsoft Softcard Edition for Apple
II and Apple III Owners" - Thom Hogan

Probably good hardware (sold to me as working, kept in good condition, but
I never used them. I don't have time to test them. I'll refund your money
if they don't work):
Apple-brand MIDI interface (plugs into ADB port) - $15
APL printer card (Epson), no manual - $10
Microbuffer II 16K serial card - new, unopened - $20
Z-Card II (Advanced Logic Systems' Z-80 card), with manual - $10

Many issues of a specialty Apple magazine called "The Assembly Line". I can
provide a more complete list of issues if someone is seriously interested.

=== Part 5. Atari ==

Atari ST 3.5" software - $2.50 each
E-Z Track MIDI Sequencer - new, unopened (2 of them)
Personal Pascal *
ST Key *

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk -- will trade

=== Part 6. Macintosh 3.5" disks ===

$2.50 each

Crimson Crown
Enchanted Scepters
Frogger
Ground Zero
Mastertype
Rival 1.1.4
Time and Magik

$3.50 each

Click Change 1.04
Corruption
Deja Vu

$4.50 each

Mac Plot, standard V3.4
Pools of Radiance
Status Mac - 1991, System 7 compatible, unopened

Strategic Conquest Plus - disks only - $1.50

Note: Some of these games are old and may only run on older Macintoshes
with System 6 or earlier.

=== Part 7. TI-99/4A ==

Working cartridges - no boxes

$3 each

Beginning Grammar, no docs
Connect Four, no docs
Household Budget Management, w/ docs
Munchman, w/ docs
Personal Record Keeping, w/ docs
Superfly, no docs
Terminal Emulator II, w/ docs and keyboard templates
BOOK: Programming BASIC with the TI Home Computer - Peckham

Cartridges WANTED (will also trade the above for or possibly buy):
Beyond Parsec, Bigfoot, Computer War, Frogger (Parker Bros), Hopper,
Jumpman Jr., Space Journey, Spy's Demise, Star Maze, and Tris.

= Books ==

Amiga Hardware Reference Manual (Revised) - Addision-Wesley, 1989..... $6
Commodore 64 Programmer's Reference Guide (orig schematics missing)... $5
Commodore 64 User's Guide (2)..... $3 ea
DBase III Plus Handbook 2nd Edition - Chou, Que Books..... $3
Mastering CP/M - Alan R. Miller, Sybex Books, 1983..... $4
Osborne CP/M User Guide "Special Microsoft Softcard Edition for Apple II
and Apple III Owners" - Thom Hogan..... $3
P-CAD Illustrated User's Guide: Printed Circuit Board Design
"048-0226-02 Rev 3.00 Kit Illustrated UG SW/MNL" -- still sealed... $10
Programming BASIC with the TI Home Computer - Peckham..... $3

==

The above prices do not include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how
heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or
priority US mail. I don't have time to deal with lots of small transactions,
so I need to ask a minimum of $15 worth of items. If you buy a lot of stuff
at once, I will make you a deal on the shipping. In general, a few pieces of
software costs $4 or $5 to ship.

I will only ship within the continental UNITED STATES. No exceptions.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the
message or in the subject header: "Forward to Randall". Because these
messages will be hand-carried on floppy disk once per week, it may take
me 1-2 weeks to respond.

all.

Realistically: at least a 33MHz 68040! (40MHz+, ideally, for 68K)
Unrealistically: Barely tolerable with a 50MHz 68030 accelerator.

I just looked it up. Xformer and Gemulator is at Branch Always Software's home page at http:/www.halcyon.com/brasoft/ with a procedure for registered owners to get a password for upgrades. Hope this helps. And I hope he works on it just a little more to get the display list to work right in the middle of the screen on things like the demos he includes with his program. Xformer is real close to being a perfect 8 bit emulator. It's already by far the fastest one I've ever seen.

Version 3.5 is the latest version, which is the same as 3.3, except that
it allows the use of a cable connected to the PC to which you can connect
SIO devices, like Atari printers, disk drives, etc. There's a web page
now where registered owners of version 3.0 and above can upgrade for free.
Look for it listed as a link in other Atari 8 bit pages as "Branch
Always Software", I think.
Good luck.

2357. FS/T: Atari 8-bit computer items [04/23/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-23 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4lic4i$2vt@dfw-ixnews1.ix.netcom.com>
Source record: 84384

NOTE: Due to a problem with Netcom's newsreader, this may appear more than once on your system, and/or it may be garbled. All of my FS/T lists are also available at http://www.io.com/~vga2000

updated 04/23/96

NOTE: Screen shots of some of these games are available on my web site.

I have the following Atari 8-bit software and hardware for sale or trade.

Everything is sold as is. Unless specified, all items have been tested and are in perfect working order.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

Buyer has ten (10) days to send payment, and pays all shipping costs, which will be sent via U.S. Postal Service. The shipping cost depends on both the weight of the package and the distance that it is traveling. Buyer has the choice of either first class or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Canadian buyers must send a Canadian Postal Money Order, payable in U.S. funds. This is the only way I have found to deal with my friends to the north (my bank is very picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$10.00 Astro Chase (Parker Brothers)
$ 6.00 Atari Logo
$ 6.00 Atariwriter

$ 6.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$ 6.00 From: vga2000@ix.netcom.com(Michael J. Novak Jr.)

^^^^^
>Thanks, Reinhard

I bought one recently from Reinhard without remembering that the game
only works on the older Atari 400/800 computers-- not the XL series.
^^^^^^^^^^^^^^^^^
I didn't ask him to take the game back, as I already opened the
shrinkwrapped box. But keep this in mind-- it does not work on all Atari
8-bit computers.

I vaguely remember an Action RunTime Library that you could link the
application with and then they could run the program. don't know a source.

I beleive the Translator or UltraTranslator will make it work on
the XL/XE. It's been a long time but I think that's what I used to get it
running on my XE for my kids.

<STUFF DELETED>

Good luck. I have been looking for months for a "working" SpartaDOS XFD file. I can find and even make the DCM file but all of the utils I have found so far to convert to a XFD file just trash out SpartaDOS. I would kill for a "bootable" XFD of SpartDOS 3.2d. I even wrote twice to Mike at FTe, who now owns SpartaDOS and offered him $50 for a working XFD but he never responded. If I ever do find something I will let you know.

2364. Re: Marble Madness & Gunslinger

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-23 00:00:00 UTC
From: ken@cup.hp.com
Message-ID: <4lj6hi$1dv@hpax.cup.hp.com>
Source record: 84391

OK. The rumors are getting strong enough that I believe that EA released Marble Madness for the Atari 8bit. In a post at the beginning of April, Tom Pschar says he has the packaging for Marble Madness for the 8bit, but can't find the disk. In an issue of Antic magazine I have at home, in the letters section, Trip Hawkins of EA (I think it was Trip) wrote in saying that the letter writing campaign that Antic encouraged their readers to do had convinced EA to release more Atari 8bit software, and Marble Madness would be the next release they did.

About 1 year ago, someone on this list sold a copy of Marble Madness to someone else on the list, I called just a little too late :-(, but I've lost the names of both people involved.

Also, James King on this list claims to have a copy. Since it is a rare game, and _MANY_ people, including myself, seem to want it, I hope _SOMEBODY_ comes forward with a copy and posts it to the net. If someone who owns the game can't copy it because of copy protection, I hereby offer to loan my 1050 Happy Drive to them to copy it, or if they prefer, they can send me the disk, and I'll copy it and send it back.

2365. * * Let's Trade Files * *

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-23 00:00:00 UTC
From: thester@nyx.cs.du.edu
Message-ID: <4lk49i$72m@nyx.cs.du.edu>
Source record: 84392

I'm posting a list of files here from a pirate BBS that I used
to frequent many years ago in Seattle. It is doubtful that it's
still up, but you never know. Anyway, the purpose here is to
advocate some trading. I know that some tightass is going to
holler that we should abide by the letter of the copyright
laws--but that's tough. My Atari is not long for this
world, and I wish to get things for it before it's gone forever.
And I want to share as well.

Many of these files are *not* commercial, but most are.
The ones that have an 'x' to the right of them means that
I have it. If I have it in a form such as cartridge or
boot disk, then that means it's a copy protected version;
I can't send those to you. If it's just an 'x', yes.
If it says "file and cartridge" then yes again.

If you want any of the files with the x, send me email and
I will be glad to send whatever it is you want.
If you have any of the files on this list that I don't have
marked, send them to me if you would.

This is NOT a complete list of what I have. Trade with me
and I'll send a full list.

Uncle Fester

>cartridge?

Yes there is a way. You need to get the Action Run Time Library disk.
This enables you to share your programs with other people who don't have
Action carts. You could check with B&C ComputerVisions and see if they
still have some. There phone # is (408) 986-9960.
Action was orginally released by Optimized System Software (OSS) and was
later bought by ICD (makers of MIO and US Doubler). When ICD got out of
8bit computers they sold their entire inventory to Mike Hohman of Fine
Tooned Engineering (FTe). He is the one who owns the rights to it and B&C
ComputerVisions is the only source to get ICD/OSS products through. Hope
you find it alright.

Glenn Bruner

2367. Shamus DOES work on XL's!!

> only works on the older Atari 400/800 computers-- not the XL series.

>Mark then explains it won't work on the "XL" computers< ^^^^^^^^^^^^^^^^^

Oh, but it does! I found this out by accident, just hold the "Start" key
down while loading; then instant the "Shamus" screen with the music
appears, the game WILL load the rest of the way...
(I.E. the GAME works fine, but something in the music player system
must bug XL machines....)
I know this to work on the cart and the disk....

Happy gaming!
Aaron Howald (No applause, please. I'm humble.)

Hello I would like to get rid of this stuff as soon as possible.

800xl in not so good shape. (keyboard a little worn)
800xl in better shape
400 comp. works good.
basic cart.
4 other game carts.

1050 disk drive works good
1010 tape drive works good
1010 tape drive parts. free
All computers & drives come with power suppluys & serial cables.

Make reasonal offer for the whole lot. Buyer pays shipping.
E-mail me for fastest responce, as i rarely subscribe to this group.

Source record: 84260

Hi,

I recently picked up an Atari 800xl from a boot fair for 2UKP.
Now I need a Power Supply for it.
Does anyone have one of these forsale or know where I can get
one from?
Failing that, can anyone tell me any details about the PS the
computer expects. I have a CBM64 PS with the same DIN socket type,
but don't want to risk using it.

Regards,
Steve.

P.S. I am also looking for a PS for a Dragon 32 if anyone has
one gathering dust.

I have gotten this cart to work on my XEGS system, though all carts seem to
be rather touchy on this system (even the XE-specific ones I've tried).

jeff. it takes a lot of jiggling and attempts
sometimes, but...

If it won't run on an XL, get one of the many translators, and it should
then be fine.

POKE 77,0
You have to do this from time to time to reset the timer which counts down
to start the screen saver.

From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <317E0B8C.288@rcp.co.uk>
Source record: 84267

Hi,

I am looking for information about the layout of an AtariDOS/
MyDOS disk structure for Enhance Desity and larger size
disks/disk images.

For example, on Single density the VTOC is store on sector
360, but for a disk/disk image containing more sectors there
is not enough room in this sector to store the entire Volume
bitmap. Where is the rest stored?

Are 16Mbyte ATR files still limited to 64 files?

Thanks

Ivan

From: UASZ40A@prodigy.com
Message-ID: <4llesn$gs0@usenetw1.news.prodigy.com>
Source record: 84269

Yes, POKE 77,0 is the key. As you've noticed, joystick movement isn't enough to reset it. But to be precise, it's not really an Atari Basic screen saver. This screensaver, which Atari called "attract mode" from the video game days, is actually part of the operating system, separate from Atari Basic.

2384. Re: Using RGB/SVGA Monitors with Your 8-bit!

Yes, the dot pitch is the thing. I have composite inputs on an old Amiga RGB monitor, and the artifacting disappears on it with just a standard composite cable. But keep in mind that many games depend on artifacting to "trick" extra colors out of Atari's high res mode. Conan comes to mind as a port from an Apple game that uses the "defect" to it's advantage getting green, sort of an orange, a kind of purple, as well as black and white in this high res mode game.

The cart works on my 1200XL and my XE system. :)

2386. What's best disk drive?

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-24 00:00:00 UTC
From: maffia@fox.CS.Berkeley.EDU
Message-ID: <4llqh8$bo0@agate.berkeley.edu>
Source record: 84272

Hi everyone. I've recently acquired another 800XL to replace the one I lost a few years ago (moved too many times I guess.) I lost my 1050 as well, so I've been looking for one in the East Bay of the San Francisco, California Bay Area. I've been frequenting the Goodwills and such, but have only found an 810, w/o power supply, at a place where they never have SIO cables. I hate the place.

So, I'm looking to buy a new disk drive, preferably locally so I can meet the owner and see it work. But I'd like some recomendations about what the best combination is. The last time I thought about it, a Happy 1050 was the best. What are the best other options? Copying software is no longer a concern of mine, but I need to read my Enhanced Density disks, would like to write to double density, and would like it to connect to my PC in case a stable emulator becomes available. Right now, all I can do is type in Basic games, which is not exciting.

Thanks.... Anthony Maffia

If it's an EA title, odd's are it'll need a Happy to run after being copied. They always did have a nice track 1 as far as I can remember. Still, APE should walk through it ;-)

That is --BRILLIANT-- ! I never would have thought of that ! What
you are doing is connecting to the host machine's "SENDMAIL" port service
and issuing Columbia "Simple Mail Transfer Protocol" batch commands to the
mail spooler (or SMTP for short). Yup. It should be possible to receive
mail as well. Just look up the paper on the SMTP format batch commands at
the same place where you can get the documentation for the KERMIT protocol.
You know, I never would have though of doing that. That is truly ingenious
! SMTP is as hardy as KERMIT, and runs on all kinds of hardware including
IBM EBCDIC mainframes. Hopefully it will remain text based for quite a
long time to come yet !

Now that I have answered your question... how do you do concurrent
I/O out an "R1:" port of an ATARI 850 using CC65 ? I'd like to hang a

VT100 off of my 850 for that true VT100 feel (then maybe try a VT220 and a VT340...).

P.S. Now that folks are issuing SMTP, anyone want to try for FTP ?
Hmm... it probably takes more than a simple batch protocol ?
I never looked at the paper about FTP as I assumed that it was
some type of spooler "punch class" that the ATARI couldn't
keep up with, rather than XMODEM ? Could you FTP in "store-
-and-forward", or does it have to be in "realtime" ? Hmm...
I guess you really wouldn't need to, as you could UUENCODE
and SMTP, instead! Hmm... quite a bit to think about....

2391. HP Printer Gizmo?

I would be very surprised if there was any way to run the translator in
conjunction with a cartridge. I have Shamus on disk (not cartridge) and
it works (or did last time I tried it) on my 600XL with 256K.

While you're at it, please come up with a copy of 'Bounty Bob Strikes Back.'
I have been trying to get a copy of that game for years. Now that the only
reasonable way I have to run games is via the emulators, I would love to see
an image that could be run on the emulator. Anybody?

I'm starting to think we need a better FTP site to replace atari.archive.umich.edu. Currently, the FTP archive is hard to access via direct methods, and it is also sorely in need someone to maintain it on a regular basis. I'd be willing to volunteer my FTP server (ftp.kendall.mdcc.edu) for the duty. I'm also open to other suggestions to help remedy the problems of the current situations. Comments?

Another way might have been to use a Translator disk or Fix-XL found on
PD's. I'm not sure how exactly it works for carts, but someone gave me a
copy of those programs. Just thought I pass it along... :)

Ken,

You can't get a 'working' XFD of Spartados because Xformer is not
good enough to run spartados.

Steve

```
------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

The best way to get new information is to join our NAS96 mailing-list.
Write to nas-users-request@tripnet.se and include the following in the

2401. Re: Using RGB/SVGA Monitors with Your 8-bit!

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-24 00:00:00 UTC
From: tdrake1@umbc.edu
Message-ID: <4lk0tk$5vl@news.umbc.edu>
Source record: 84398

MSmith (msmith@aol.com) wrote:
: I was wondering.... do you get true RGB or do you still get the
: artifacting you see on comnposite monitors. I have been waiting for years
: for this type of device. Someonew, please reply.

Will partly depend on the quality of the input signal, but this device
provides RGB on RGB/VGA monitors which can synch down to 15.75 Khz.

The one from Harmonic Research is a video decoder. With proper inputs it
will produce studio quality outputs. Automatic color control is built-in
and it has a wide "lock-in" range. An S-video input (Luma/Chroma
composite) is standard and is selected automatically whenever an active
Y/C (S-video) signal is present. It will instantly turn a multi-synch RGB
monitor inot a high-resolution NTSC or PAL monitor. The advantage of the
RGB monitor is higher dot pitch, and especially with the multi-sync type
monitors. The NEC 3-D, for example, will synch down to 15.75 Khz and has a
dot pitch of 0.28 compared to 0.42 or worse on low end RGB/composite
monitors.

Inputs are NTSC or PAL composite baseband depending on model (1.0 Vpp, 75
ohm, BNC) or
Y/C (S-Video) 4 pin mini DIN connector (Y=1.0Vpp, C=.3Vpp burst, 75 ohm)

Outputs: 9-pin D subminiature connector. (Red, Green, Blue: 0.7Vpp each,
75 ohm, 15 Khz Horizontal Composite Sync, Vertical Sync).

Performance: Luminance bandwidth:

composite = 4.2Mhz, Y/C is 6 Mhz

Resolution: Video = 330 lines, Y/C = 480 lines.

The soon to be released scan-doubled version which will eliminate all
scan lines has even better performance with a composite video of 4.5Hmz
and Y/C of 8Mhz.

Uncle Fester (thester@nyx.cs.du.edu) wrote:

: >Jan Meisler (meislerj@charm.net) wrote:

: http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

: This is Bill Kendrick's "New Breed Software" site.
: You can find the "Unofficial Atari 8-Bit New User, Emulator
: Help FAQ" there along with other fine things for your
: real or emulated Atari.

TECHNICALLY, "http://zippy.sonoma.edu/~kendrick/nbs/" is the New Breed Software site, while the above URL is the actual unofficial FAQ itself.

: As to your other question regarding copy-protected disk
: images and your emulator-- No, you don't need to be a
: hacker. While you're at the site listed above, check for
: links to other Atari related sites and keep an eye out
: for A.P.E. (Atari Peripheral Emulator). You use this
: along with SIO2PC. As I understand it, there is a provision
: for loading copy-protected disk images with this to your
: PC's hard drive. Since you use A.P.E. with your REAL
: Atari along with SIO2PC, it's obvious that the ATR file
: format will be capable of use by the 8-bit emulator running
: on your PC.

Ah - actually, although APE works with the SIO2PC cable, there are two problems here:

(1) You can't MAKE ProSystem (copy protected) disk images with an SIO2PC cable. You need the ProSys Cable. Different wiring.
(2) I know of no emulator which supports the ".PRO" file format which APE uses to store ProSystem (copy protected) disks. The "PRO" format is ALMOST identical to the "ATR" format (which all of the emulators except ST Xformer (and I think that very very wierd and authorless German "800XL" which nobody uses) EXCEPT it contains the copy protection data. (Dunno exactly how). Inotherwords, only APE knows how to use PRO files.

So.. Darek, Chris, David, Markus, Frank, you guys gonna support PRO any time soon? :)

Source record: 84401

GSBruner (gsbruner@aol.com) wrote:
: Will Dwinnell wrote:

: > I was wondering if there was any way to run Action! programs without
: >cartridge?

[the best answer so far :)]

Someone else said (I had to laugh) "I think there was an Action! compiler".

Actually, that's all Action! IS - a compiler! The problem is, the `built-in' Procedures and Functions are pre-compiled. When you do, for example, a "Print()", all it does is jump to the "Print()" routine, just as if it were your own function. The problem - when you compile and save ("WRITE") an executable in Action!, it doesn't save all of those routines (which are simply pre-assembled / pre-compiled code built into the cartridge).

So - when you compile "ABC.ACT" and write it out to "ABC.COM" - then give it to a friend - when they go to run "ABC.COM", it's trying to jump into code which isn't there any more! :)

GSBruner was correct in stating that there are "runtime libraries" available. All these are are Action! "includes" (ie, sourcecode) which contain Procedures and Functions as replacements to the built-ins. They're already precompiled (or assembled), but are coded in a relocatable way and stored as hex data kind of like this:

```
Proc Print(char array string)
[ $12 $43 string $85 $39 $FD $AB $29 ]
```

I BELIEVE there's a free one up at UMich.. let me see...

Yep, under "Languages" it's called "actrun.arc" (I THINK that's the one).

Good luck and happy compiling!

It's not SD that isn't working, it's the emulators--none of them (to my
knowledge) will run it.

i got a 40meg Scasi hard drive (fujitsu)
that was working with my Black Box.
It's all most completely filled with all kind of software, including
lots of european Game, demos, utilities. especially game making
utilities that i got from polin.
the Hard Drive is installed inside a Black Scasi case, with a built in
power supply. i also added an extra Fan. to take care of the long
hours i am using my computer...
i also added an external LED at the bottom right corner of the case
that gives indication every time the Hard Drive is reading or writing.
from the Black Metal Scasi case the is a Scasi cable that goes
straight to a Black Box.
I am asking 100$ for this deal... if anyone is interested please Email
me.
you can also view a picture of the Item on:

http://www.pacificnet.net/~nirdary/hd2.gif

note that the Hard Drive case is between my 130XE and the Xf351 drive.

Source record: 84406

NOTE: Due to problems with Netcom's newsreader (caused by system upgrades), I am posting this from my backup account at Freenet. All of my FS/T lists are also available at http://www.io.com/~vga2000

VERY IMPORTANT! Please reply to my Netcom account. I have not had any problems with Netcom's e-mail, and I only check my e-mail on Freenet twice a month. I apologize if this is a problem for you.

updated 04/23/96

NOTE: Screen shots of some of these games are available on my web site.

I have the following Atari 8-bit software and hardware for sale or trade.

Everything is sold as is. Unless specified, all items have been tested and are in perfect working order.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

Buyer has ten (10) days to send payment, and pays all shipping costs, which will be sent via U.S. Postal Service. The shipping cost depends on both the weight of the package and the distance that it is traveling. Buyer has the choice of either first class or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Canadian buyers must send a Canadian Postal Money Order, payable in U.S. funds. This is the only way I have found to deal with my friends to the north (my bank is very picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$10.00 Astro Chase (Parker Brothers)
$ 6.00 Atari Logo
$ 6.00 Atariwriter
$ 6.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$ 6.00 Centipede
$ 6.00 Computer Chess
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$ 6.00 Joust
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$ 6.00 Millipede
$ 6.00 Missile Command
$10.00 River Raid (Activision)
$ 6.00 Super Breakout
$10.00 Super Cobra (Parker Brothers)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 130XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$59.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE, with one (1) Molex connector cable.

This disk drive doesn't include the power supply.

$34.00

*****

LOT #6

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #7

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #8

ATARI 800 COMPUTER *AND* ATARI 1050 DISK DRIVE, for parts only!

These items are not working, but might be used as a source of parts
(example: the 800 keyboard and chips).

$10.00

*****

LOT #9

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me.

2410. AUCTION: Atari XEGS, 400 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-25 00:00:00 UTC
From: Benjamin Summers <summers@flop.ENGR.ORST.EDU>
Message-ID: <Pine.SUN.3.93.960425152154.14520E-100000@flop.ENGR.ORST.EDU>
Source record: 84207
Cross-posted to:
rec.games.video.marketplace,alt.games.video.classic,rec.games.video.classic,rec.games.video.atari,comp.sys.atari.8bit

4/25/96 15:00 PDT

NOTICE: Auction has now entered the 'going once, twice, gone' phase.

Please read the rules at the end of the auction.

Atari 8-bit----------

Hardware:

Atari XE Game System: $35 produnl2
Includes Atari Light Gun, one CX40 joystick, GOING ONCE
keyboard, and power supply. A very nice
system and quite hard to find.

Atari 400 Computer: $13 Zrocool376
Includes one CX40 joystick, power supply, GOING ONCE
and built-in RF cable.

Auction Rules:

o The most recent auction update is now available on WWW at the
following address: http://www.cs.orst.edu/~summers/8bit

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on April 25th. After
that, highest bidder will be determined through a "going once, going
twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and
increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW
THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A
WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders
must be paid with a Canadian Postal money order in US dollars. Allow 10
business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be
paid by the buyer and will be as follows (Continental US only): Smaller
items will be shipped with larger items if possible.

XE game system: $10 (UPS)
Atari 400: $10 (UPS)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

I think so, that's what I was running into. The rest of the FAT is
stored on earlier sectors. (Format a large image using the APE
instructions and watch the pc screen. It writes first to 360-368, then
switch to earlier sectors for the rest of the fat. It still only
allocates $169-$170 for the directory, tho)

Well, 640x480 wouldn't produce any noticeable slowdown with VESA 2.0, but with prior versions,
the slowdown can be serious, though likely not as bad as 320x240 VGA (depending on how you update the screen). Doubling pixels is not really all that costly, but it kind of defeats the
purpose.

Actually the .PRO format is nothing like the ATR format except that it does
contain disk image data. Not like anybody cares, but I just had to say it :)

>So.. Darek, Chris, David, Markus, Frank, you guys gonna support PRO any time
>soon? :)

Since full .PRO support is limited to registered users of APE I will not be releasing the .PRO format or emulation source code used in APE. I could however create a dos TSR that acts as a 'disk server' and fields requests from other running dos programs for sectors.

So if any emulator authors are interested in such a server let me know. Its .Pro funcionality would be identical to ape, and fully enabled only for registered users.

Source record: 84214

Okay, I picked up an 800XL for only $30.00, a 13" composite monitor, a cable from Toad for $10.00, and now I'm functional...(barely) I turn everything on and holding down Option I can get it to go into the self-test mode. Everything reports as being fine...Just turning it on gives the blue screen with "Ready" in the upper left hand corner...At this point, can't you type anything in? Its been 10 years since I owned an 8-bit Atari but I thought I remembered being able to type in program listings even though I didn't have a disk-drive...the only key it will respond to is the break key, which makes it drop down one line. No other key does anything at this point...Am I doing something wrong (or forget-ing some vital step) or do I have a problem with the machine? Thanks in advance for any info... :)

2418. Re: AtariDOS/MyDOS info requried

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-25 00:00:00 UTC
From: bmarcum@iglou.iglou.com
Message-ID: <DqE9oM.8Mv@iglou.com>
Source record: 84287

In Atari DOS 2.5, there is a VTOC in sector 1024, using all 128 bytes of the sector to map sectors 1-1023. There is also a VTOC at sector 360 for compatibility with DOS 2.0.

Mydos uses sectors 360 and 359 (in enhanced density), and for larger disk drives it uses lower sector numbers. On a true double density drive, the VTOC can use all 256 bytes per sector, but directories use only the first 128 bytes. Mydos allows 64 files or subdirectories in each directory, so the main directory of a hard drive partition might consist mostly of subdirectories. The source code for Mydos is available, so it could be patched to allow more files per directory.

The best disk drive, if you can find one, is probably the Atari XF551. It can read and write single, enhanced, and double density, and double sided-double density. It can also be modified to use a 3.5 drive mechanism to store 720K per disk.

I support the idea for a replacement FTP site. In fact, if this
replacement site has enough storage, I'd be willing to upload my huge
collection of files there, provided I get some admin authorities to
maintain some of the directory structure.

Oops, I apologize for that one. I finally dug out the packaging, only to find
that it was an old EGA IBM version. B(

Sorry for perpetuating the rumor. I really thought I had it for the 8-bit.
It may still exist, but I don't have it.

Tom

If it has a standard Centronics printer interface, like for PC compatibles, any of the Atari printer interfaces should work. MPP made one. There's the Atari 850 interface. And there's the PR connection. All of these are available at B&C Computervision in California at 408-986-9960.
If your HP printer has only a Macintosh interface, good luck. I don't know of anything for that.

"Your Atari Computer, XL edition" is great for the basics. Even though the pictures show the older Atari 400/800 stuff, the commands are almost all the same. If there are any differences, the XL or XE editions should point them out. B&C Computervision has them at 408-986-9960.

Winston,

I don't know about uploading via FTP, but for downloading, you can
always use FTPmail (batch) with your SMTP access. This of course requires
a means of retrieving your mail...

On the matter of telnet-ing in to a Port 25, I have always wondered
if you could somehow retrieve mail this way. From speaking to
sysadmins, etc...it did not seem possible. Prove me wrong and
I'll be happy though.

Actually, I think the letter writing campaign only convinced
EA to port Marble Madness to the Atari ST.

I heard an 8-bit was planned, but that's as far as it got.

However, the ST version was crap, especially compared to the
Amiga version. The Sega Genesis version was far better than
the ST one. I own the coin op of Marble Madness, so I definitely
can compare it to all formats.

But the one cool thing the ST version did that the Amiga didn't have
was the MIDI interface was active. So if you had a Tone Generator or
keyboard, the music would run through it. I wish more ST games
did this instead of relying only on the sound chip.

Just my 2 cents, as I was/am a huge fan of Marble Madness.

^^^^^^^^^^^^^^^^
As many of you pointed out, it does work if you hold START down while
turning on the computer.

I though I had tried this, but apparently I was holding down OPTION (out
of habit, I guess).

Therefore, the game DOES work on all Atari computers. I was in error.

SO, what are you waiting for? Go buy one from Reinhard right now! Buy a
bunch even. A steal at $6...

Yes and don't forget that even with the 720K, 3.5" installed, it
still supports High Speed Mode. Makes a big difference when you are
backing up a Hard Disk.

I think it is the Ultra Translator that Will work with Cartridges. I
know one of the Translators will, it's in the DOC's and I've used it. You
do have to install the Cartridge after you have Booted and then run the
Translator. Something like that, I'd have to go back reread them to get
it right.

: used one. Thanks much.

I use an interface board called Zetec (I think, it's packed away right now), that works quite well from my 800XL to HP DeskJet. I have the older Deskjet, with an Epson FX80 emulator cartridge. I think this is the sticking point. There isn't much for software on an 8-bit Atari that supports HP LaserJets, so Epson emmulation is a must. With this emmulator, every program I've tried on the 8-bit that supports the FX-80 (common) works quite well. Without the cart for the printer, you should still be able to dump ascii code to the printer, or write your own software to support the HP's codes. But it is quite possible to get it to run with an interface card for the Atari SIO port.

If your ISP supports popmail, take a look at
http://er4www.eng.ohio-state.edu/~funkr/pub/pop3.html
I wrote it for people here at OSU, but the main part of it should
apply anywhere. It also has links to the RFCs for POP3 and SMTP.

Note that some sysadmins will frown on you telnetting to port 25,
since it's a classic way to forge email.
When you do send email that way, don't forget to type the headers
(From:, To:, Subject:, etc.) after your DATA line.

Information on all the usual internet protocols can be found in the
internet RFCs. You can find them on the web at
http://www.cis.ohio-state.edu/hypertext/information/rfc.html

Repost

Stumbled across this group and reminded me on my old Atari 400 (great computer in it's day). Anyway. In Early 80's had chip for a 400. Fit in slot and had a switch. Allowed cracked programs to run off disk. Well ,400 died about 4 years ago and found 800 but chip won't work in it. Have close to 500 programs (most better than todays Sega/Nintendo games) but no way to access.

Are there any chips availble out there? For Sale? Please post or E-Mail me @ keshler@dreamscape.com.

2442. Re: Running Action! code w/o cart

From: nickd@vpnet.chi.il.us
Message-ID: <DqGA83.3vF@espada.chi.il.us>
Source record: 84219

Actually, the ACTION! compiler is in the cartridge. What one needs to compile ACTION! programs so that they will run without the cartridge is an ACTION! runtime library. There was a commercial one available from OSS/ICD, and there is also a PD/freeware one (I'm pretty sure I have it, because I remember compiling an ACTION! program that way). Check FTP sites (like a.a.u.e), BBSs, online services, etc. (I think I downloaded the one I have from Delphi, that's where I download most stuff from.)

Date: 1996-04-26 00:00:00 UTC
From: RCAD40A@prodigy.com
Message-ID: <4lpj31$41c@usenetp1.news.prodigy.com>
Source record: 84221

Continuing the XFormer Emulator <=> SpartaDOS Topic,
I have received a SpartaDOS image file that is called version 33A.
This will boot up using the Xformer. I used that image to format a second
image using the init.com file from the old SpartaDOS 1.1 disks using the
STANDARD.DOS. This will also run on the XFORMER (3.5). The Sparta 1.1
image will run more games than the 33A image. The 33A image can make a
double density image too!
I can e-mail one or both of these images to interested Atari users.

2445. ACE emulator disk fixed (v0.02)

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-26 00:00:00 UTC
From: feb6399@osfmail.isc.rit.edu
Message-ID: <4lpd2b$qms@news.isc.rit.edu>
Source record: 84222
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

First of all, I'd like to apologize to everyone who downloaded
ACE v0.01 and found that it couldn't boot disk images. That was
due to a last minute "fix" I made years ago the last time I worked
on it. Well, I found the problem, and now it works.

So, give v0.02 a chance (it boots very fast too for anything
that uses the OS vector for reading the disk, but it can handle
software that has its own SIO/disk routines as well)

It's at:
http://www.csh.rit.edu/~shaggy/software.html

(and for those who don't know, ACE: the Atari Computer Emulator
is mainly for Unix systems (Linux and others) and supports X-windows
and SVGA graphics and comes in source code form, and it's free,
so if people want to add features to it and fix bugs it can
become a community effort!)

Have fun!

- Frank

Hi,

I have another DOS problem:

At the end of each sector for a file on a DOS disk is
3 bytes:
hi and low sector offsets for the next sector
number of bytes used within the sector.

The hi sector offset also provides something called
a directory number in the top 5 bits.

Has anyone got any info on what this is?????

Any help appreciated.

I am currently writing a Disk image manager that will
allow creating XFD/ATRs, XFD<->ATR, adding files to,
deleting, extractings files from etc.

: processor (modified the Atari BASIC editor).

I've actually got the Monkey Wrench II around somewhere, but since my
old 800 long ago bit the dust (to be replaced with an even more
dilapidated 400) I can no longer use it. Oh well.

It did a few useful things, like automatic renumbering of line numbers
and stuff like that, but it also took up 8K of RAM and left you with very
little memory. Because of this, it wasn't really all that useful. The
right cartridge slot had possibilities -- for example, I suppose it
could've been used to upgrade 8K left-cartridge games -- but it was never
utilized for that purpose.

: 3 bytes:
: hi and low sector offsets for the next sector
: number of bytes used within the sector.

: The hi sector offset also provides something called
: a directory number in the top 5 bits.

The 'directory number' is the # of the file as listed in sector 361.
If the file # doesn't match the directory entry number, then you'll
get an error when trying to read it.

I wasn't aware of holding down START for any reason other than to load
machine code off of cassette! I have no doubt it works, but WHY?

Raid on Bungeling Bay never came out for Atari. Broderbund also ported
Lode Runner (screen-shot looks bad, oversized characters) and Spelunker
to the NES.

Other NES games available for Atari 8-bits previously:

Activision Archon
Mindscape M.U.L.E.
Micropose F-15 Strike Eagle
Milton Bradley Jordan vs. Bird: One-on-One
JVC Boulder Dash
Ultra Silent Service

(not including arcade ports)

mdcc.edu == Miami-Dade Community College, located in Miami, Florida.

I recently upgrade the whole system so you may have logged in in the
interim period. Everything Atari-related should be in /pub/atari.

I was wrong about B&C ComputerVisions having some copies of the Action Runtime kit. I talked to Bruce yesterday and he said Mike Hohman of FTe never supplied him any. If you can manage to get a hold of Mike Hohman (I was looking for his address in the newsletter he put out last summer but can't locate it at this time) I think he was selling it still. In fact he packaged together Action cart, toolkit, and sold them all together.

Clay Halliwell, if you're reading this, do you know how to get a hold of Mike?

Sorry for the crosspost; seeking those disciplined in the ways of gaming
on the Atari 8-bit computer and the 8-bit Nintendo Entertainment System.

The Atari 400 was my first 6502. The NES was my (the?) last.
I was surprised to see that some of the old 400/800 games had such
staying power that they were released on the NES later. I was pleasantly
surprised, that is.

I am hoping to compile a list of games that are common to both of these
gaming platforms (yes the Atari is really a computer). So far, I know
these games are common:

1. Archon
2. Arkanoid
3. Boulderdash
4. Defender
5. Donkey Kong
6. Donkey Kong Jr.
7. F15 Strike Eagle
8. Ghostbusters
9. Gyruss (just got this on NES; forgot how fun it was)
10. Infiltrator
11. Joust
12. Lode Runner
13. MULE
14. Pac-Man
15. Popeye
16. Q-bert
17. Qix
18. Spy Hunter
19. Spy vs. Spy

That's all I can think of! Anybody know for sure?
Thanks a mil.

James

2457. WANTED: Dealers for SwapMeet: Pacific NorthWest!

The next SwapMeet is Monday, May 6th, 1996.

WANTED: Dealers to sell at Upcoming Swap Meets. Dealerships sought fall into such Categories as Computer Dealers, all kinds. All kinds of Computer HardWare, SoftWare, Peripherals & Accessories for ALL Computer Makes and Types.

Also Sought are Dealers in Video Gaming Equipment, such as Video Game Consoles, Cartidges, Video Game CD Players and Video Game CDs. ALL Video Game Makes and Types. ALL Video Game Consoles, Cartridges, CDs, Peripherals & Accessories.

On the May 6th SwapMeet, we will be Raffling off a Panasonic Printer! Anyone showing up can win. Just be their for the Drawing. The first Ticket is ***FREE***! Additional Tickets are a Dollar each. This is One of Many good reasons to come to Our SwapMeets.

Recruiting New Dealers with Membership for Dealer Value. You could setup at a full year of swapmeets, 12 Monthly swapmeets at $10 a Meet, for $120 a year, or join our group and setup ***FREE*** for a year for ONLY $50! Greater than a 50% Savings!

Also Wanted are Dealers in ALL Types of Electronics.

WANTED are Dealers in Ham Radio, CB Radio, Music CDs and other Recorded Music. Stereo Equipment also Wanted.

Also Wanted are VCR's, Video Tapes, TVs and Satelite Gear.

This is an ALL Computers, Game Machine and Electronics Swap Meet!!

Small Businesses, and Dealers Welcome and Wanted!!

NO ADMISSION CHARGE!!! PLENTY OF FREE PARKING!!! NO ADMISSION CHARGE!!!

TABLES $10! TABLES, FIRST COME, FIRST SERVE!

Swap Meet Location in Portland, Oregon. USA. At 1819 N.W. Everett St. at the NorthWest Service Center On the First Monday of each Month.

To find out about more about the Swap Meet call our 24 Hour Recorded info line at (503)650-7196 or for Live info, call from 3 PM - Midnight, Monday - Thursday, Friday 3 PM - 6 PM. Please call, especially dealers at: (503)256-9974 (VOICE/VOICE MESSAGING), leave your home number if Ben is not answering!

>VT340...).
>
>
The concurrency I'm about to describe is for simultaneous open
channels to both the disk drive and a modem over the SIO cable. If
you ever want to see a major lock up on an atari 8bit, just open a
channel to the modem, then open a channel to a disk file, and try to
do i/o to both of them. It will lock up your system rock solid. But
if either your disk drive is connected to a bb/mio, or your modem is
connected to a bb/mio, or both your modem and drive are connected to a
bb/mio, you can do real concurrent i/o.

If you want to do i/o with both your drive and modem over the
SIO cable, you absolutely must write a SUSPEND and RESUME routine.
Suspend has to be called before any disk i/o, and resume must be
called immediately aftwards. It gets to be a mess, but it must be
done. Example in MAC/65:

```
jmp start

exit
jsr suspend
close 2
rts

r.dev .byte "R1:"

suspend
close 1
rts

resume
open 1,12,0,r.dev
xio 40,1,0,0,r.dev
rts

start
open 1,12,0,r.dev
xio 36,1,15,0,r.dev ;Set the port to 19.2k baud.
xio 38,1,32,0,r.dev ;No translation.
```

```
xio 40,1,0,0,r.dev ;Start concurrent mode.

jsr suspend
open 2,4,0,"D:>term.cnf"
bpl ?b0
print 0,"Open error!"
jmp exit

?b0
.local

jsr resume

; more code.....
```

You have to do a jsr suspend immediately before any i/o to the disk drive, and you have to do a jsr resume immediately afterward. Of course this is a very cursory example. If you were writing a bbs program you'd want to set which lines to monitor for carrier drop, put in more error trapping, etc. But I hope this helps.

Hmm - sounds like the keyboard is dead or isn't hooked up right. Pop the case open and see if that <crappy> plastic-with-metal-tracings `cable' is hooked up correctly.

From the self test, can you run the keyboard test and get a response? If so, then perhaps the BASIC part of your interal ROM is flakey??

Good luck!

There does exist a beta version of Arkanoid for the Atari 8 bit. After a
certain level when I was playing it, it crashed.

Hello,

I'm trying to write a Diskcomm -> .XFD converter, but I have a problem
with the diskcomm specs that I have. I've implemented the RLE decoding the
way it was described in my specs, and it will not work right.
Can anyone explain exactly
how diskcomm does its RLE encoding, or point to a document that does a good
job at explaining it?

Yes... it is why one can only have 64 files on an AtariDOS formatted disk.

First... there are 6 bits for the file number and 10 bits for the sector number. Those 10 bits limit the number of sectors to 1024 (which is why the 1050 drive in enhanced mode on AtariDOS formatted disks could only use 1024 sectors, though there were 1040 sectors. The six bits give the number of the file in the directory... 0 for the first file, 1 for the next file, 2 for the next file, etc.

That way, if (for some reason) one file overwrites sectors of another, when looking through the first (overwritten) file (say, file #6), going through the sectors, DOS would notice that, say, the sixth sector really belongs to file #10 (say) and would know that file #6 got overwritten.

Those six bits can handle numbers from 0 to 63 which is why only 64 different file numbers (64 files) fit on an AtariDOS format disk.

hello. I recently downloaded Tom Hunt's "P4" sound utility, which can play all those .wav files floating around cyberspace. Unfortunately, some of these files can't be played where they will sound right. I think it has to do with the megahertz. The atari can'd handle these files, which are created on 16 bit pc systems with the newest version of soundblaster. Does anyone know how many megahertz the Atari 8 bit can handle? I THINK the .wav files i've downloaded that dont seem to want to sound good are about 11 megahertz. can the 8bits handle these files, where it might take a new revision of Tom's file?

please reply...

You need an interface product of some kind. If its a normal Paralell
printer then you need:

1) Pr Connection/850 Interface (Standard Hardware Printer Interfaces)

Or if your HP is hooked to a PC, get a copy of APE, the Atari Peripheral
Emulator and use your printer right through the PC from the Atari.

APE can be had @ http://www.nacs.net/~classics

Doug,

Frankly the Umich atari archive is dead. Nobody ever posts the
files uploaded there. You can try mailing them to the person in
the faq, but those e-mails are ignored as well.

Sounds like you were sold a very expensive, very broken 800xl :) If your
in basic ('READY') then you should be able to type.

There are more qualified people here to help you fix it, but if you
can just take it back and get your $$$ back or get another 800xl if
it came from an Atair shop.

Hi Everyone!

Since I've been working on my home page a little, I would like
to give credit where credit is due to all the people who have added
support for APE to thier menu progrmas, image converters, etc.

Actually no need to be APE specific, just APE useful :) Menu loaders,
image tools, etc.

Just send a URL for the file, or if you don't host the file just
uuencoded/mime the file and send it directly to me with a
description.

Also, I will be putting in a small gallery of disk images, so
if you have anything you think should be on the APE page just let me know :)

Thanks!

On Mydos disks with more than 720 sectors (enhanced density, DSDD or
larger disks), there is no directory number; the sector offset uses all 16
bits.

Yeah, I played that one. It was **terrible.** The ball wasn't even
round; it was a kludgy block. The ball must not even have been a sprite;
it was jumpy and flicked so bad it was hard to play. Joystick control
was awful. The graphics _and_ gameplay were the worst. Sad, because the
8-bit Atari could do so much better. The Atari ST version is the best.
THe NES version is darn good, though you need an optional "paddle"
controller for it.

James

Yes, it's the index of that file in the directory.
It can be used to make sure that a sector really belongs
to the file it says it belongs to, and it can be used by
disk utilities to find chains of sectors from deleted or
lost files.

>I am currently writing a Disk image manager that will
>allow creating XFD/ATRs, XFD<->ATR, adding files to,
>deleting, extractings files from etc.

Check out the source code to ACE, my Atari Computer Emulator.
It's got support builtin in for reading/writing XFD
and ATR disks (as well as the real disks if you want to
build a parallel port to SIO cable) And it has some
basic Atari DOS functionality in it, for accessing directories
and files on those disks, and copying them to/from
the native file system of the machine you're using.
(probably most of what you need is there already, but feel
free to add what you feel is missing)

It's at:
http://www.csh.rit.edu/~shaggy/software.html

(and if someone wants to move a copy to the Atari archives,
I'd appreciate it... I can't ever seem to get through)

2488. Let's Trade Files - Part II

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-28 00:00:00 UTC
From: thester@nyx10.cs.du.edu
Message-ID: <4m19u9$28s@nyx10.cs.du.edu>
Source record: 84315

Ask, and ye shall receive!

Finally, here's a list of _most_ of what I have available.
I've tried to get it all listed, but I'm sure that a few
things have been missed here and there. Whatever.
If you want any of these sent to you via email in uuencoded
form, just tell me. I'm not going to ZIP any packages because
duplicate requests from others make this just more work than
necessary. Until a real (and accessable) FTP site is set up,
this looks like the way things should be done. The 'warez'
groups are unavailable at many sites also. (like mine)
If you have something that isn't listed here, I'd appreciate
it if you'd send it my way. It will be added to the list
and shared with everyone.
If you send me a request for something and you don't get it
right away-don't worry-you'll get it. Sometimes I'm a little
slow to respond, but that just shows that I have a life. ;-)

Don't copy this whole list and send it back to me!

Files listed as "EXE" are binary load files.
Some work with DOS, some don't. In fact, some will work
with Atari DOS, yet not with MYDOS. The best thing to do
if you get a file that doesn't load and run, is to use a
bootstrap loader. That is, no DOS, but a menu that boots
up with a list of all files on the disk. If you need one of
these, just ask and I will send you a file that will create
just such a thing for you. (Single Density only)

Files listed as "DCM" are files that require Bob Puff's
Disk Communicator 3 to re-create the compacted disk image.
If you don't have Diskcom3, I can send that to you as well.

If there are any particular utilities that you are in need of,
just ask and I will see what I can do for you. I have many
such things. Best thing, check the archives before you come
to me. If you can't get in to them after really trying, then
ask me. If I don't have it, maybe I will know where it is.

Lastly, files described below as "untested" doesn't mean
that they don't work. Most of them are just things that
I can't recall what they are off hand. If anything doesn't
work, email me and describe what happened. You may merely
need the Translator program, or you may be trying to run
XL/XE programs on a 400/800 computer. If it's the latter,
then you're out of luck unless you get an XL/XE.

If you received this message via email, obviously not everything
applies to you personally. This was posted to c.s.a.8.
You got it via email because you're one of my traders and should
be kept up to date.

Let's all work to make this list longer!

NITERADR.EXE - NIGHT RAIDER-FLY OVER ENEMY CITIES AND BOMB 'EM
PACMAN .EXE - PACMAN-CARTRIDGE CLASSIC
PACMANJR.EXE - PACMAN JUNIOR-SCROLLING MAZE PACMAN GAME
PCIFCRUN.EXE - PACIFIC RUN-UNTESTED-(GET CHICKEN ACROSS ROAD??)
PENGO .EXE - PENGO-CART CLASSIC- PENGUIN AGAINST SNOBEES
PINCONST.DCM - PIN BALL CONSTRUCTION SET
PINHEAD .EXE - PINHEAD-CATCH AND POP BALLOONS ON HEAD RIDING UNICYCLE
PITSTOP .EXE - PIT STOP-RACE GAME WITH PIT STOPS, WHAT ELSE?
PITSTOP2.EXE - TWO PLAYER PIT STOP-SPLIT SCREEN RACING
POLEPOS3.EXE - POLE POSITION THREE-RACE GAME WITH TRACK DESIGNER
POOYAN .EXE - POOYAN-THREE LITTLE PIGS AGAINST LITTLE WOLVES-FUN
POPEYE .EXE - POPEYE-CATCH OLIVE OYL'S KISSES AND AVOID BLUTO

PREPPIE .EXE - PREPPIE-FROGGER LIKE GAME WITH LAWN MOWERS AND BOATS
PREPPIE2.EXE - PREPPIE II- UH OH-BIG FROGS ARE AFTER YOU
PROTCTR .EXE - PROTECTOR-DEFENDER CLONE
PROTCTR2.EXE - PROTECTOR II-DEFENDER CLONE
QBERT .EXE - Q-BERT-CLASSIC-CART VERSION-HOLD YOUR JOYSTICK CORRECTLY
QIX_V1 .EXE - QIX-ARCADE CLASSIC-ATARI PROTOTYPE??
QIX_V2 .EXE - QIX-ARCADE CLASSIC-ATARI CARTRIDGE VERSION
RAINBWLK.EXE - RAINBOW WALKER-FUN GAME
RCADERUN.EXE - ARCADE RUN-UNTESTED
REPTON .EXE - REPTON-YET ANOTHER DEFENDER CLONE
SHAMUS .EXE - SHAMUS-SHAME ON YOU IF YOU HAVEN'T HEARD OF THIS ONE
SHOOT .EXE - UNTESTED
SLINKEY .EXE - SLINKEY (LIKE THE TOY) Q-BERT-LIKE YET DIFFERENT
SNOWBALL.EXE - SNOWBALL-A SNOWBALL THROWING FIGHT
SNOWFITE.EXE - SNOW FIGHT-SAME AS ABOVE - BOTH ARE GROIN BUSTING FUN
SPACE .EXE - UNTESTED
SPACEGGS.EXE - SPACE EGGS- SIMILAR TO GALAXIAN-BUT IT _IS_ DIFFERENT
SPCNVDR .EXE - SPACE INVADERS- AT LEAST ATARI'S BAD ADAPTATION OF IT
SPEEDWAY.EXE - SPEEDWAY - A RACECAR THAT SHOOTS STREETCLEANERS-REALLY
SPYHUNTR.EXE - SPY HUNTER-CLASSIC-REQUIRES TWO JOYSTICKS FOR WEAPONS SEL.
SPYVSPY2.DCM - SPY VS SPY II-ISLAND CAPER-SPLIT SCREEN HIJINKS FROM MAD
STARTREK.EXE - STAR TREK SIMULATOR GAME- COULD HAVE BEEN BETTER
STARWARS.EXE - STAR WARS-IT LOOKS LIKE THE ARCADE GAME BUT IT'S NOT
REALLY-I DON'T KNOW IF THE CRACKER WHO HACKED THIS ONE
DIDN'T MESS SOMETHING UP-YOU CAN'T DIE AND IT'S TOO EASY
STEALTH .EXE - STEALTH- I LOVE THIS GAME- NICE GRAPHICS TRICKS IN IT.
STRATOS .EXE - STRATOS-UNTESTED
STRRAID2.EXE - STAR RAIDERS II - DISAPPOINTING SEQUEL
SUBCMAND.EXE - SUBMARINE COMMANDER - UNTESTED
SUBMISS .EXE - SUB MISSION (SUB-TERRANEAN THAT IS) A.N.A.L.O.G. GAME?
SUPERPAC.EXE - SUPER PACMAN- NO BUGS IN THIS VERSION AS FAR AS I KNOW
SUPRBUNY.EXE - SUPER BUNNY- LAME GAME - DID THEY REALLY SELL THIS?
SUPRZAXN.EXE - SUPER ZAXXON-ZAXXON ALL OVER AGAIN-NOT TOO DIFFERENT
TAPPER .EXE - TAPPER-UNTESTED-BEERMUG CATCHING BARTENDER?
TCTCTO3D.EXE - TIC-TAC-TOE 3D - UNTESTED
TETRIX .EXE - TETRIX(WITH AN X) TETRIS GAME- NICE BUT LOOK BELOW
THEWALL .EXE - THE BEST VERSION OF TETRIS FOR THE ATARI YET-
BY ITAY CHAMIEL - (HE DENIES IT, BUT HE'S REALLY
A PROGRAMMING WIZARD)
TURMOIL .EXE - TURMOIL-UNTESTED
VANGUARD.EXE - VANGUARD-HORIZ. SCROLLING CAVERNS GAME-UNTESTED
WAYOUT .DCM - WAYOUT-UNTESTED
WIZRDWOR.EXE - WIZARD OF WOR-ARCADE CLASSIC-
ZYBEX .EXE - ZYBEX-HORIZONTAL R-TYPE STYLE GAME-XL/XE ONLY

>Hi all! Anybody want this atari disk Strip Poker. I am not sure which
>atari computers it will play on. I got it with a 1050 disk drive.
>I used it on an Atari 800xl. BTW, the game is not original, it is on a
>maxwell disk.
>Thanks, Brett

Is it a 'protected' copy? I have a Happy backed up copy
that was given to me, but even though I have a Happy 810,
I haven't been able to copy it (yet) because I don't play
good enough to get the program to access all sectors (for
trace). What I mean is, the ladies have to get nekkid
first.

Can you make a DiskComm (Disk Communicator 3 by Bob Puff)
disk image file of the thing and uuencode it and send it
to me? I have many files for trade as well. Look in
c.s.a.8 for details. (Let's Trade Files - Part II)

If you can't DisComm the thing, then it's copy protected.

Uncle Fester

<people write how much Atari 8-bit Arkanoid sucked>

Anyone here ever play "Unicum", "Technoid" or "Exploding Wall?"

Three excellent `souped-up breakout' games. I dunno what their statuses are, except for Unicum, which came on the back of a Top Magazin disk (so it must be PD, Freeware or Shareware). The other two I got ahold of via other folks, and I hate to say it, but I'm guessing I got sent pirated copies. Anyone know where to buy them if they are commercial?

BTW - Technoid (from what I recall) is the best of the three.. Or, uh.. maybe Exploding Wall was.

Oh yeah, they all three need PAL to work (properly)

-bill!

Hello!

I am looking for a description (plan, etc.) of the ST XFormer cable.
As far as I know, it is in the public domain.

I want to modify it (as BRAsoft described to ABBUC), so that it will
work with the PC Xformer. (as you may know, BRAsoft does not produce
the cable any more).

greetings...

Does anyone out there know if a standard 3.5" drive can be hooked up to this interface? I need to back up my harddrive, but using the 1050 will take dozens of diskettes to cover it all! Any advice?

Also, anyone know how to get the RS-232 port to work correctly on this thing? Unless I miss my guess, there was no provision made for modems that require the DTR line...

I have (buried in a closet somewhere, with my 800) an 80-column graphics card
that combined with a right-hand cartridge to allow you to use 80 columns on a
monitor or TV... it required replacing a circuit board on the 800, feeding 2
cables CAREFULLY out through an air vent, and plugging a right-hand cartridge
in... kinda fuzzy, but it did work...

2498. Old software, dead companies

Newsgroup: comp.sys.atari.8bit

From: mgorelick@pmh.com
Message-ID: <4m2qso$6cg@alterdial.UU.NET>
Source record: 84325

This weekend, I puchased an Atari 800 with 1050 disk and some other goodies, much like the system I had from about 1980-1985. I really loved the machine (hey, I sold my Commodore PET to buy it!) back then and thought it would be fun to fool around with a 6502 and play some of my old favourite games, like Archon and Star Raider.Of course, there really isn't a way to buy these anymore except from people who are selling their old stuff, and that's rather hit-or-miss at best.

I wonder, though...how vigorously do you suppose companies like Electronic Arts would protect a copyright on a game they haven't sold in 10 years? I might be able to get a cracked copy of Archon from a friend, and since I bought the game at one time, it's sort of a gray area...And companies like DataEast (I think they made Bruce Lee, another fave game) don't even exist anymore.

Anybody got any thoughts on this issue?

On the subject, whatever happened to alt.binaries.atari.8-bit.warez?

2499. S: 8-Bit FTP Site

Subject: Re: Let's Trade Files - Part II

[see end of post to understand the following rant_ U.F.]

Cheezen H. Cripes!

I can obtain pictures of women from Playboy magazine
on UseNet.
I can obtain pictures of men from Playgirl magazine
on UseNet.
I can obtain pictures of copulating males and females
on UseNet.
I can obtain pictures of naked children on UseNet.
I can obtain pictures of children engaging in sex acts
with adults on UseNet.
I can spread anti-semitic propaganda on UseNet.

I can obtain the most vile stuff anyone can imagine on UseNet.

I can apparently POST any of the above material with NO
FEAR OF REPERCUSSIONS ON USENET!!!!!!

But just let me post a list (yes--just a goddam LIST) to
UseNet--NOT THE F***ING material ITSELF--and look what happens!

The sheer asinine, HYPOCRISY OF THE INTERNET makes me PUKE!

All of you (AND YOU KNOW WHO YOU ARE) who complained about
the CDA, no matter its faults, who would then turn right
around and "TSK, TSK" me for POSTING A GODDAMN EFFING *LIST*
are out of your EFFING, TINY, MINISCULE, NEARLY-NONEXISTANT
MINDS!

If YOU THINK (and I seriously doubt that you comprehend what
the term "think" actually means) that UNCLE FESTER is going
to turn over and play dead because of this, then you have
got some BIG surprises in store for you now.

If ANYONE is mistakenly thinking that this is going to just
blow away--THEN YOU ARE WRONG!!

The publicity I am going to generate over this is going
to extend WAY BEYOND the Denver Post.

There is a collective of morons who seem to think that the
media somehow misunderstands "the net" by running stories
about the salacious material that is an abundant portion
of the internet. You buttheads have it wrong. The media

is only exposing the rot that the internet spreads by
facilitating it with its hypocritical implementation of a
thing called UseNet.

Take all of your "blue ribbon campaigns" and shove them
directly up your hyocritical assholes where they seem
to truly belong.

Here's the reason:

[Re: Let's Trade Files - Part II]

>As you know, this kind of activity (and posts that indicate this kind
>of activity) are -strictly- forbidden from Nyx; not only is it illegal
>but it also places Nyx's very existance into jeopardy.

>This is your only warning on this matter; any repeat of this type of
>activity from Nyx -will- result in the immediate removal of your account
>from Nyx.

>The System Administrator has been fully informed on this matter.

Illegal?

2502. Hypocrites Rule The Net - Part II

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-29 00:00:00 UTC
From: thester@nyx10.cs.du.edu
Message-ID: <4m3c56$i57@nyx10.cs.du.edu>
Source record: 84329

Subject: Re: Let's Trade Files - Part II

After receiving the initial missive pertaining to
the alleged "illegal" activity that I am supposedly
engaged in, I pointed out that the files in question
are not obtainable through any retailer or other
official source. I got this in reply:

>This is not a matter for debate. It is illegal to give away copies
>of copyrighted materials without permission of the copyright holders.

How in the hell does anyone know that I don't have
their permission?
How does he know that the material in question may
actually be "copyrighted". Presumption only.
Hypocrites in action.

>If there are any other users from Nyx giving away copies of copyrighted
>materials through their Nyx account without the permission of said
>copyright holders, they will be dealt with in -exactly- same manner.

Exactly the same hypocritical manner, I guess.

Look for Uncle Fester to make a Big Ass[tm] of both
himself *AND* his UseNet 'pusher' (Nyx) in ways never
before dreamed possible for such an insignificant
little corporation. (Yes-Big Ass Technologies is a
real incorporated business-but it doesn't sell a dang
thing-yet)

Big Ass Technologies, UNlimited is re-tooling the "production
line" for the introduction of an innovative little
bit of irritating 'fluff' that uses a form of stealth
technology to grow into a HUMONGOUS mass of irritating
'fluff'. And best of all--it's going to be ABSOLUTELY
FREE! That's right! FREE! They didn't ask for it,
but Uncle Fester saw the need and he's going to fill
that dark little niche in the marketplace with something
so repulsive-YET AT THE SAME TIME-attractive, the hypocrites
will come out in droves to buy it and eat it up like
manna from Heaven. The indigestion they will get will
be OF THEIR OWN MAKING! But the hypocrites won't be
able to help themselves and they'll just continue to feed
on this 'chum', as any true hypocrite is wont to do.
The resulting indigestion they will feel will be their
own fault.

The Atari 8-Bit computers may be dead and/or dying, but
Uncle Fester is alive and well. Make no mistake about
that. This time around, the fight is going to be so
'public' that even the Greencard Lawyers will be green
with envy.

The can o' worms has been opened and getting it closed
is not going to happen anytime soon.

Uncle Fester
Exposing UseNet Hypocrites To The World At Large

2505. Atari Stuff For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-29 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <4m37e8$lr@main.freenet.hamilton.on.ca>
Source record: 84332

I have the following surplus Atari equipment which I will accept offers on:

I reserve the right to reject the best offer if in my opinion, it would be better to keep said item as a backup.

Atari 130XE with Power Plus 320 k upgrade, Ultra Speed Plus OS, TRANSKEY. Will not separate Transkey.

The Multiplexer, with 1 Master and 3 Slaves. Possible (not confirmed) problem with (NEVER USED) third Slave cart. The cart seemed to switch Ident numbers during a test. Unknown potential problem. AS IS. (Original master and slaves work fine)

Black Box, Floppy Board with CASE.

Adaptec 4000a controller board.

Rtime 8

Express Cart terminal

Atari XF551 (stock)

Atari 810 disk drive with "The Chip"

Please make offer in US funds. Shipping paid by purchaser. (Note: Shipping from Canada is twice as expensive as to Canada from the USA) Will not be responsible for lost shipments if purchaser does not insure! All items are working and in excellent condition except where noted.

Please leave Email to William Moeller at af332@freenet.hamilton.on.ca

>Electronic Arts would protect a copyright on a game they haven't
>sold in 10 years?

Like the rest of the companies -not at all- (yet).
Look at the Commodore 64 and Apple FTP sites and you'll
see something that is continually being denied the
dwindling Atari 8-bit community because of hypocritical
tight-asses who have nothing better to do than whine
about copyright issues that mean absolutely nothing in
relation to a dead platform. IMO

>I might be able to get a cracked copy of Archon from a friend, and
>since I bought the game at one time, it's sort of a gray area...

Many people (like myself) purchase >most< of the software
that they have and can't make backup copies for many reasons.
No Happy Drive or Pill or equivalent.
So they're just supposed to let their LEGAL software slowly
fade away and forget about ever seeing it again.

That's what the hypocrites want us to do.

>And companies like DataEast (I think they made Bruce Lee, another fave
>game) don't even exist anymore.
>
>Anybody got any thoughts on this issue?

By now, most everyone knows my thoughts. :-)

>On the subject, whatever happened to alt.binaries.atari.8-bit.warez?

Well--it exists someplace. Like a lot of sites, Nyx
(where I'm at) refuses to carry these sinister-type
newsgroups.

But they make up for it by allowing access and posting priveleges
to all the sex groups like:

alt.binaries.pictures.erotica.teens/oral/facials/butts/
alt.sex.pictures
alt.sex.pedophilia.pictures/male/female/swaps
alt.sex.pedophile.mike-labbe

You see--pornography--no matter what it is,is OKAY on UseNet.

Just don't you DARE post or solicit the trading of programs
for dead platforms like the Atari 8-bit.

But hey, if you're C= or Apple then it's tolerated for some
obscure reason that nobody has been able to explain fully
to my satisfaction yet.

Uncle Fester

Well, you could always do what I've done, which is to tie your 8bit
Atari into a Novell network via SIO2PC or APE. I now have access to
that disk storage and multiple printers.

The Transkey is installed in the computer. An IBM keyboard plugs into a
connector on the side of the 130XE. Just plug in a 101 keyboard.

I just picked up a second hand XE with keyboard, joystick, Light gun, but nothing much else, exept a flight sim. cart.

Can anyone point out anywhere where I can find basic stuff, like a definition of the XE BASIC? Even better, can someone lend me a manual (I live in the UK).

Please help !!!

By the way, I have a 2600 - can the light gun for the XE be used with this?

Bye,

Chris.

Message-ID: <4m42js$1tq0@usenetz1.news.prodigy.com>
Source record: 84340

Re: Marble Madness for Atari?
I have a version of this game for the PC. It was made by EA in 1987.
I think it uses EGA graphics. It comes on two 5 1/4 inch disks. The first
disk is used to "boot-up" the computer. Then, you have to insert disk #2
into the 5 1/4 drive at the half-way point in the game (unless you have
two 5 1/4 drives).
My newest computer does have a 5 1/4 drive but it won't let me boot
from that drive (only from the 3 1/2 drive).
SO, does anybody know what to do with this ancient type of software?
I remember that it does play very nicely and looks like the real thing.
Of course PC joysticking is not the greatest......
Any comments from all you Atari / PC Game Gurus ???

Psychopathic tendencies? No responsibility for his/her actions?
Let's see.

> All of you (AND YOU KNOW WHO YOU ARE) who complained about
> the CDA, no matter its faults, who would then turn right
> around and "TSK, TSK" me for POSTING A GODDAMN EFFING *LIST*
> are out of your EFFING, TINY, MINISCULE, NEARLY-NONEXISTANT
> MINDS!

My, my, my. Abuse. Fortunately, I didn't "TSK, TSK" you for your
list. I knew you'd get in trouble when I saw it, but figured that was
your problem, and you'd learn not to do it again. However, you don't
appear to be able to "take responsibility for [your] actions"... You
stupidly posted a warez-list to USENET, in a channel that's known to
be ambivalent about the subject of piracy at best, and now that you
got your wrist slapped, you're whining about it like a little baby.

> If YOU THINK (and I seriously doubt that you comprehend what
> the term "think" actually means) that UNCLE FESTER is going
> to turn over and play dead because of this, then you have
> got some BIG surprises in store for you now.

Nobody's expecting you to turn over and play dead. I, personally, am
hoping that you'll shut the fuck up, but I'm not *expecting*
anything.

> If ANYONE is mistakenly thinking that this is going to just
> blow away--THEN YOU ARE WRONG!!
>
> The publicity I am going to generate over this is going
> to extend WAY BEYOND the Denver Post.

"Newbie gets wrist slapped, whines about his God-granted right to post
anything he wants to USENET."

> There is a collective of morons who seem to think that the
> media somehow misunderstands "the net" by running stories
> about the salacious material that is an abundant portion
> of the internet. You buttheads have it wrong. The media
> is only exposing the rot that the internet spreads by
> facilitating it with its hypocritical implementation of a
> thing called UseNet.

Here we go. "Uncle Fester" admits to doing something (arguably)
illegal, gets a talking to from his internet provider, and suddenly
"the net" is this nest of hypocritical morons, all out to
spread their vile porn while poor little "Uncle Fester" can't even
distribute his wAr3zZZZ in peace.

Listen, uncle SHITHEAD. I've been on "the net" since the only
Internet providers were universities and the military. I *don't* like
to see whiny little newbie lamers like yourself scream yourself blue
in the face about your supposed "right" to anything, *especially* when
you're apparently the only one who *deserves* this right.

I don't even understand how you can *possibly* think that anyone is
going to take you seriously when you're obviously the little kid in
the playground yelling that all the other kids are assholes just
because you didn't get to go first on the swings.

Thank you, and good bye, mister sociopath.

2516. Mai Atari 8 Bit Show in Hanau Germany

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-30 00:00:00 UTC
From: Torsten Schall <schallt@worms.fh-rpl.de>
Message-ID: <4m4l8l$aji@widukind.worms.fh-rpl.de>
Source record: 84342

Hi Atarians out there

Next Atari 8BIT Show in Germany (Hanau) on So. the 12th of Mai 96ix
Danger !!!!!!!!!!!!!!! 12th of Mai 96 Hanau Germany !!!!!!!!!!!!!!! Danger

The show is held in a pub in Hanau and the show opens at 10 o'clock for public visitors (Traders 0830). The organisation is done by Kemal Ezcan (KE-Soft) who has established the show. For Germans is this the last Atari 8 Bit Show for the next months. The last before the ABBUC e. V. JHV 96 (Oktober) in Herten (Germany). The show gives you the chance to find software that is not in your software libary.

KE has got some lost treasures from Atari and other sources. The never released Superman 3 Card, Tower Topler, Lords of Conquest, Seven City's of Gold, Great American Cross., Infocom Seastalker-Moonmist...., and many classics.

AMC will show the Stereo Blaster/Phaser , Multipad and a infrared Mouse for the Atari 8 BIT and some new developed Hardware. He shows games like Herbert, Ski 3D and more.

Kaisersoft show the new Polensoft from 94/95 including some erotic games for the 8 Bit Atari with 256 Colors, the new Ram developments. He hpefully has the new TOP Mag finished and has a part of PPP stock Software there.

Privates:
There are private trader who show and sell the soft- and hardware.
There should be a place for your secondhand Soft- & hardware give others a chance to get your's before it falls in the trashcan.

Meals and Drinks:
You can buy your meals and drinks in the pub and rest between you hunt for new soft- & hardware for your kute system.

Overall:
It's clear thet you will find there many lost treasures for the Atari 8 BIT System at a incredible low price (for the traders " Aeh a joke "). You can meet people with the same hobby and talk between the buisness. You must not be hungry or thirsty but you should be there. A must for people who want more for their system. Meet us !!!

Hints:
Call KE-Soft for more Info (Way to the Show ...)
Come and sell your secondhand soft- Hardware
Take a close look to Marek Tomczyk Atari 8 Bit Resort
http://www.uni-karlsruhe.de/~Marek.Tomczyk/8bit.html
or call Phone: +49 (0)6181-20739

++
C O M I N G S O O N

Softlist Info:
The Software list follows the next days. I hope i can send Marek Tomz... a
picture of the way to the show.

OR ....

You could buy the HP Deskjet 500 w/Epson Emulation cart. that I have for
sale! With this cart plugged in, the HP Deskjet behaves just like an
Epson FX/RX 80 series printer. Since most of the Atari programs supported
Epson printers, it makes for an elegant solution to the print driver dilemma.

BTW, I'm offering the HP Deskjet 500 w/cart (This cart cost $80 when it was available)
for a total of $150 shipped in Continental US.

Bill

> Anybody got any thoughts on this issue?

I've thought about this too. I've been thinking about trying to get in touch
with some of the people who own the licenses to these old games to try
to get permission to include them on a CD-ROM of old 8-bit stuff.

It's just the hassle of tracking these people down, esp. if the company
doesn't exist anymore.

Tony Smolar

I know this wont help but...

I remember having this years ago and it was a cracked copy of some sort. I did have a happy 810 but I was able to give it to all my friends. Besides that, you were able to "cheat" and get all the way to the naked girls automatically by doing something. What, I can't remember as this was ~13 years ago.

One day, if I ever get lucky enough to find my crate of old Atari 8 bit disks, it will be among them. Until then I slowly rebuild my collection.

-Glenn

It was pretty simple; rename the files so that the naked files are
the first read.

for sale atari stuff:

1 130xe
3 800
1 400

1 1050 disk drive
1 830 modem
1 850 i/o thing
1 410 casette drive
1 star brand dot matrix printer

i know that the stuff that we have set up right nmow works fine,
this is the 130xe, 1050 dd, 850 i/o, and the printer.
the other stuff hasnt been used in about 5 years, but it all worked
fine then.
i dont know what all or any of this is worth to anyone, so
e-mail me any offers.

thanks

Strip poker to a 4 year old? You have got to be kidding!
I know the computer is 10 years old, but some games were meant
for the pre-schoolers. It's people w/ no thoughts like you that
incite the republican congress to piss all over the internet.

Besides, the game sucked anyway.

Hi!

I have carefully read all the FAQs I can find and still have a couple of questions for other folks reading this newsgroup. Hope someone can help me figure these out!

1. I've got a couple of files that have .PRO extensions, but can't find anything that looks like it turns this type of file back into a disk. Since I'm actually using an Atari and not an emulator, I'd need a way to do this on the Atari itself. Which leads me to...

2. I also have a few .ATR files and an .XFD file. These would be great if I wanted to use the XF2 emulator, but I don't. I'd like to turn these into .DCM files or some other helpful format...but how? The only thing I can think of is to use a utility like "Disktran" (old utility I used to use to transfer a whole disk, sector by sector) on both the real Atari and an emulated Atari and send it via serial. Is there another solution?

Thanks much for any help you folks might have to offer!

-Marc Gorelick

2528. Re: Old software, dead companies

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-30 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <4m64fg$12uq@useneta1.news.prodigy.com>
Source record: 84354

I guess you can include me as one of those "hypocritical tight asses".
Even though getting copyrighted software for free for the Atari 8 bit
line might not bother the major software companies, it can still hurt the
remaining few Atari 8 bit dealers in the world, which I appreciate dearly.
And there really are a few 8 bit developers out there too, though they
do it for the love of it more than the money. You can still buy games
like Bruce Lee at B&C Computervision and other dealers. OK, so the C64
and Apple users don't care as much about this. Does that make them better?
OK, I'll get off the soapbox for now. Anyone else?

2529. Re: WTB: Joysticks for 800XL

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-30 00:00:00 UTC

Source record: 84355

You can buy joysticks and also the cheaper joystick repair kits from B&C Computervision at 408-986-9960.

2530. B&C Computervisions

Newsgroup: comp.sys.atari.8bit
Date: 1996-04-30 00:00:00 UTC
From: Paul Gallier <panther@strangeworld.com>
Message-ID: <3186B238.4333@strangeworld.com>
Source record: 84356

After years I've finally decided to dig my Atari 130XE out of the garage and hook it up. I discovered, however, that I'm missing the power supply (I'm quite certain gremlins got to it - they enjoy going through my garage). Now the problem was, where in the world do I get a power supply for such an incredibly obsolete computer? I remembered once ordering Atari computer parts from a company called B&C Computervisions near San Jose (Santa Clara as it turns out). So I called up information and was actually given a phone number. I was surprised to learn that they are still in business and now after speaking with them I'm even more surprised. The woman I spoke to was helpful about the power supply and even knew the price without hesitation. I began to get a bit perturbed when they told me they don't accept COD's, they only allow credit cards when the phone number can be verified through information (doesn't work with people like me who have unlisted numbers), and checks have a three week hold time. Is it just me or is this just a bit on the extreme side? Well, I finally realized that I'll be within 20 miles of B&C this weekend and can just make a slight detour.

I decided I would also check if they carry an Atari 8-bit emulator for PC's I'd learned about while browsing some web sites. The emulator is called the "PC Xformer" by Branch Always Software. It turns out that B&C carries this product. I also wanted the cable (also by Branch Always Software) that allows a person to connect an Atari floppy drive to the PC's parallel port for use with the PC Xformer. Branch Always Software sells the software on CD-ROM (with some extra Atari 8-bit software) and the cable in a package for $69.95. B&C however, only sold them separately for $49.95 and $29.95 respectively. I inquired as to whether or not they sold them as a set for a lower price as Branch Always Software advertised. She replied that they don't and that she can't go lowering the price just because I asked her to. She also asked me why I'm bothering to call them if I can get it somewhere else for less. Her behavior was extremely rude to say the least. I've decided it's not even worth buying the power supply from someone who so obviously doesn't want my business.

Paul Gallier

P.S. Does anybody have an Atari 130XE power supply for sale?

(http://www.smartpages.com/faqs/atari-8-bit/faq/faq.html)
You can also ask the FAQ keeper, Michael Current, for a copy at:
mcurrent@carleton.edu

If you want the latest copy of this FAQ:
Unofficial Atari 8-bit New User and Emulator Help FAQ
(http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html)
You can also ask me, the FAQ keeper, Bill Kendrick, for a copy at:
kendrick@zippy.sonoma.edu
This file is also posted in text format on the 1st of the month on the
comp.sys.atari.8bit and comp.emulators.misc newsgroups.
------------------------------------------------------------------

Recent Changes:

* Since v.1.1 (March 5, 1996): Added information about XL-It! and
XFSIO.
* Since v.1.0c (Jan. 17, 1996): Updated and added a number of Web,
e-mail and program links.
* Since v.1.0b (Jan.4, 1996): Fixed some MAILTO: links.
* Since v.1.0a (Dec.15, 1995): Added info. (finally!) on how to
contact authors of all of the emulators.

Summary of Atari 8-bit's and emulated 8-bit Atari's:

* Real Ataris: Atari 8-bit computers were produced between 1979 and
1987. The major models released were the:
+ 400 - 8K-16K, 400/800 OS, CTIA or GTIA graphics (depends when
made)
+ 800 - 8K-16K-48K, 400/800 OS, CTIA or GTIA graphics (depends
when made)
+ 1200XL - 64K, 1200XL OS, GTIA graphics
+ 600XL - 16K, XL OS, GTIA graphics
+ 800XL - 64K, XL OS, GTIA graphics
```

+ 65XE - 64K, XL OS, GTIA graphics
+ 130XE - 128K, XL OS, GTIA graphics
+ XEGS (Game System) - 64K, XEGS OS, GTIA graphics (Had Missile Command)
All of the XL's except the 1200XL had BASIC installed on ROM. BASIC can be purchased on cartridge for the 400, 800 and 1200XL.
* Emulated Ataris:
+ On IBM PCs/compatibles:
o PC Xformer 2.x. Limited Public Domain demo.
o PC Xformer 3.0x. Powerful Commercial version.
+ On Apple Macintoshes:
o Rainbow. Limited Public Domain demo.
o Rainbow. Powerful Registered Shareware version.
+ On Atari STs, TTs, and Falcons:
o ST Xformer 2.x. Limited Public Domain (previously commercial).
+ On UNIX and X Window: (including PC and Amiga)
o Atari 800 Powerful Public Domain version.
o XL-It! Powerful Public Domain version.

Capabilities of an Atari 8-bit:

GRAPHICS:
* The Atari has maximum resolution of 320 x 192 (standard, non-overscanned screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4, 160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also supported. 40 x 24 x 256-character (128 normal, 128 inverse, character set indirection available) text mode is standard (2 colors).
* 40 x 24 x 128-multi-colored-character (4 colors per character allowed, the other 128 characters have 4th changed into a color 5) and 40 x 12 x 128-multi-colored-character screen modes are available.
* GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only, and 80 x 192 x 9 color screen modes.
* Normal (bordered), narrow (underscanned), and wide (overscanned) screen modes are available.
* Screen modes can be mixed (by lines) down the screen using the Display List (a program which is executed by the ANTIC graphics chip every screen refresh (60 times per second on real NTSC Ataris).
* Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.
* All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via a "Display List Interrupt."
* Four 8-bit wide, 128 or 256 byte high single color players, and four 2-bit wide, 128 or 256 byte high single color missiles are

available. A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to XOR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection (which is not supported by the PC Xformer 2.0 and 2.5 and ST Xformer programs).

SOUND:
* Four voices of 8-bit pitch-resolution (3.5 octaves), 4-bit volume-resolution, and 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.
* A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was rerouted through the normal audio output, and the keyclick can be disabled.
* Some hardware stereo upgrades (like "Gumby") exist which double the number of voices.

Objective of this file:

At the time of its release (mid 1994), much discussion went on in the comp.sys.atari.8bit Usenet newsgroup about the Atari 8bit emulator for IBM / MSDOS based computers, PC Xformer 2.0 (XF2 for short). Many people in the 8-bit community had gotten fed up with the XF2-based questions which did not pertain to them, or to the very simple questions which came up time and again which bothered regular readers / digest subscribers.

This file was created to reduce the number of 'newbie' and XF2 questions. Now it's becoming a fairly good reference (and got me the job of writing the commerical 3.0 release's documents!).

This FAQ will present answers to simple questions like "how do I turn off BASIC" (a good answer to that of course is, READ THE FRIGGIN' MANUAL) and "how do I get a disk directory?"

It will also direct people who are unaware of the large amount of Atari 8-bit support (NOT NECESSARILY EMULATOR SUPPORT) and perhaps become a supplement to the many official and unofficial files floating around the net (like the official FAQ, the Vendor/Developer List, the Who's Who list, etc.).

-- QUESTIONS AND ANSWERS: --

1. What does "READY" mean?

This is the Atari BASIC prompt. See below for hints on Atari BASIC.

2. Why doesn't this program load?

The program may not work under the Atari 800 Operating System, it may require the XL/XE Operating System. Be sure you're in 800XL or 130XE mode. (Note: Not all (versions) of emulators support XL/XE modes!)

It may not work under the XL/XE Operating System (rare cases), switch to 800 mode.

Be sure you turned BASIC off before trying to load it if it cannot run with BASIC on.

It might be a BASIC program! Be sure you're in BASIC and use the BASIC "RUN" or "LOAD" (and then "RUN") command. Also, be sure it works with the BASIC you have. Some programs only run in BASIC XL or XE (which are both cartridge-based BASIC's not easily available to an emulator), and some run with TurboBASIC XL (disk-based).

It may just refuse to run on the emulator.
3. How do I turn off BASIC?

To toggle BASIC on and off in PC Xformer, press [SHIFT]-[F10].

To toggle BASIC on and off in Rainbow, ???.

To toggle BASIC on and off in Atari800, ???.

To toggle BASIC on and off in XL-It!, ???.

To toggle BASIC on and off in ST Xformer, ???.
4. Why doesn't this game/program run correctly?

It may use player/missle collision detection which is not supported on some versions of emulators.

See "Why doesn't this program load?", above.
5. How do I exit the emulator?

To exit PC Xformer, press [F5]. Note: this does NOT temporarily 'shell' or 'jump' to MSDOS.

To exit Rainbow, press [Apple]-[Q] or select "Exit" from the "Apple Menu".

To exit Atari 800, ??? or close the window (in X Window).

To exit XL-It!, ??? or close the window (in X Window).

To exit ST Xformer, ???.
6. How do I get to Atari DOS?

In BASIC, type "DOS" at the "READY" prompt.

Reboot without BASIC on.

Be sure you have a DOS-bootable disk image installed in drive 1 ("D1:").
7. How do I use files which are not in disk images with an emulator?

To "install" files as though there were plain disks with PC Xformer, simply add the files to the command line and use them as their respective drives (be sure the first drive is a DOS-bootable disk image).
Example: XFORMER MYDOS45.ATR filename.ext

To use a file from your Mac in Rainbow, make sure the disk image in drive 1 has enough space for the file, and select ???. The file will be added to that disk image.

To use Unix files in Atari800, use the H drive. ???.

To use Unix files in XL-It! ???.

Use the MSDOS program S2PC which allows you to access files within a MyDOS/compatible .ATR disk image. S2PC let's you read, write, delete, change directory, and view the directory of a MyDOS/compatible .ATR disk image. It can be used via command-line parameters from MSDOS, or as a menu.

Use the MSDOS program ATARIMG, which is much like S2PC but has a nicer, more graphical (less-menu driven) interface. (Unfortunately, this doesn't run on all IBM's!)

Use the Mac program Virtual Disk Editor ???.
8. Just what ARE .ATR and .XFD files?

Refer to the XFormer and SIO2PC manuals for details on these files.

Simply put, they are Atari disks, stored as files which are as big as the disk they represent (an 88k disk image will use 88k on the IBM). .ATR files are used by SIO2PC and APE (see below) as well as most Atari emulators. .XFD files are used by ST Xformer and PC Xformer.
9. What are SIO2PC and APE?

Refer to the SIO2PC manuals for details on this program.

Refer to the APE manual and SIO2PC hardware manual for details on this program.

These are a programs which run on IBM/compatibles under MSDOS. (APE also runs fine under "dosemu" for IBM/compatibles running Linux). With the use of of a simple (and relatively inexpensive) cable, the software makes the IBM act as though it were a number of Atari peripherals. SIO2PC emulates up to four disk drives (any drive ID numbers from 1 to 8 are allowed) and a printer. APE emulators up to eight disk drives, a printer, and a modem (RS232). They use disk image files (.ATR's) and can also let the Atari access plain IBM files. SIO2PC does this much like PC XFormer

does, making the single file its own disk. APE allows you to navigate your PC's drives through an Atari drive. The printer emulation of these programs redirect Atari "P:" writes to the PC's printer. SIO2PC can also direct the output to the screen or to a plain IBM file. Different text translations/conversions are available. (APE also allows keyboard macros, command key redefinition, the ability to save the current drive/etc. configuration and load it later as a "block", and the ability to both emulate copy protected disks (with it's own extension of the ".ATR" format, the ".PRO" format (which will hopefully be used in future versions of Atari emulators)) and create disk images from copy protected disks (with a special cable). SIO2PC may soon have this ability as well, since the documentations say it has been planned for a while.)

-- Getting around on the Atari: DOS and OS --

Note: This section will simply discuss Atari BASIC, the Atari OS, and Atari DOS 2.5 and MyDOS 4.5x (because these topics seem the most relevant to the less-knowledged/experienced Atari 8-bit users). No emulator-specific information will be presented.
* AtariDOS and MyDOS QuickReference: MyDOS (4.50 and 4.53) presents the user with the following commands:
+ [*] Disk directory of current directory (like "dir *.*" in MSDOS)
+ [1]-[9] Disk directory of a disk drive (like "dir a:*.*" to "dir i:*.*")
+ [A] Disk directory (like "dir " and optional output destination)
+ [B] Quit to cartridge
+ [C] Copy file(s) ("[source],[destination]" copies from one place or disk to another, just "[source]" copies from one place on one disk in a drive to the same place on another disk in the same drive (asks for swapping))
+ [D] Delete file(s) (add "/N" to delete without being prompted first) (add ">*.*" or ":*.*" after a subdirectory name to delete the files within it. A subdirectory name alone will delete the subdirectory (if it is empty and unlocked)). (Acts like both "del" and "rd" in MSDOS.)
+ [E] Rename file(s) (renaming multiple files is allowed, but be careful). (like "ren [old] [new]" in MSDOS - with MyDOS, use "," between old and new masks.)
+ [F] Locks file(s) from overwrite, deletion and appending (like "attrib +r [mask]" in MSDOS.)
+ [G] Unlocks file(s) (returns them to their default state).
+ [H] Writes DOS files to a disk (this creates a disk which boots with the current version of MyDOS you are using and also has the menu file "DUP.SYS" on it as well). (This is like "sys"(?) in MSDOS.)

+ [I] Formats a disk (add "/N" after the drive number to do a quick-format of an already-formatted disk (ie, just a very fast "delete `*.*'").
+ [J] Duplicate disk (copies an entire disk, including boot sector, when using XFormer, it's much quicker to just copy one .XFD or .ATR to another).
+ [K] Make binary file: saves memory and makes it binary-loadable. See [L].
+ [L] Load binary file: loads a compiled program. (like "[filename]" in MSDOS, except any ".EXE", ".COM", ".OBJ", etc. is still required.)
+ [M] Run at address. Mainly for advanced users. Reboot is "E477", reset is "E474" (these are the hex values of the addresses where the routines to reboot and reset are.)
+ [N] MEM.SAV: when this is on, whenever you go to DOS (from BASIC, for example) it will write what is in memory to a file "MEM.SAV" so that when DUP.SYS (the menu) loads it isn't lost forever. When you exit DUP.SYS with the "B: Run Cartridge" command, MEM.SAV is reloaded and the environment should be as it was when you left. It's probably quicker to simply "SAVE" your programs (if in a language) which aren't nearly as big as all of the memory that MEM.SAV saves.
+ [O] Options: this presents the user with some options. Mainly for advanced users or special setups. See the MyDOS docs for details.
+ [P] Set density. Forces a drive to be recognized at a certain density if MyDOS can't figure it out. (??)
+ [Q] Make a subdirectory. (like "md" or "mkdir" in MSDOS).
+ [R] Set default directory. (like "cd" in MSDOS and "cwd" in SpartaDOS) This makes "D:" now the same as a subdirectory or other drive. ie, "D2:" will make all calls to "D:" act as though they are to "D2:" instead. Some programs when prompting for filenames do not add "D:" to the beginning if one is not present, they add "D1:". If you don't trust a program to look to "D:" instead of "D1:" and you want it to look to some place OTHER than "D1:" (ie, where "D:" is pointing which could be a VERY long path list), just add "D:" to the beginning. ALSO, some programs don't even ADD "D:"'s if they aren't in the filenames you give and may give errors (138, for example: device not present, ie, if you said "TESTFILE.DAT" it may think you want "T:" instead of "D:TESTFILE.DAT").
+ [S] Set ramdisk number. This is also under [O]ptions.
+ [V] Verify writes. This is also under [O]ptions. When Verify is on, writes will be slower but 100% reliable. With it off, writes will be much faster but possibly not as reliable (on bad disks, for example). Default is off.

AtariDOS presents the user with the following commands which are identical to MyDOS's commands: A,B,C(no swaping),D,E,F,G,H, I(some

densities),J,K,L,M,N

AtariDOS 2.5 presents the user with the following commands not present or not the same as MyDOS's commands:
+ [O] Duplicate file. This is used to copy a file from one disk to another using only one drive. (In MyDOS, giving just a source will make [C]opy act like DOS 2's Duplicate.)
+ [P] Format Single. In DOS 2.5, this is used to format 88k (Single Density) disks. To format an Enhanced Density (127k) disk, just use [I]. In DOS 2.0, [I] is the only format option and only handles 88k. (I may be wrong, but I have never had a Double Density drive under Atari DOS 2.0 or 2.5!)
* General DOS and OS questions:
1. How do I access the disk drives?

First, you need to have booted with a DOS. All but one DOS is on disk (SpartaDOS X is on cartridge). When the Atari boots up, it does some of its 'boot-up stuff' which includes looking for a disk drive connected and turned on which is set up as drive #1. It then begins to load from the disk's "boot sector". If none exists or there's a nasty error on the disk, you get the "BOOT ERROR" notice until the error is fixed. (On SpartaDOS disks, even non-bootable disks have a boot sector, but all the boot sector is is a small program which displays a 'not a boot disk' error).

To end the digression, the answer to 'how do I access the disk drives' starts with 'you must boot the Atari with a DOS'. Check the 8-bit FAQ and the UMICH and other FTP archives for lists of DOSes available for Ataris, but the most used are Atari DOS (for compatibility with almost ALL older software), MyDOS (for an Atari DOS compatible high-end DOS), and SpartaDOS (for a very high-end DOS which looks much like MS-DOS but unfortunately cannont run all software which runs fine with Atari DOS and MyDOS.) Note: SpartaDOS does NOT run on Atari 400's and 800's (except the cartridge versions and I believe disk version 1.1). Now that you have a DOS loaded, the Atari understands the "D:" device (see below for Atari devices). Since there is more than one disk drive, you have to be able to tell them apart. The Atari uses numbers when it has more than one of the same device, so "D1:" is drive 1, "D2:" is drive 2, "D3:" is drive 3, etc.!

After the "D:" device name comes the filename. Of the most used DOSes, only MyDOS supports lowercase letters in filenames, but since most programs force uppercase entry for filenames, nobody really seems to use lowercase in their filenames.
2. How do I copy things from one place to another?

Atari DOS and MyDOS give you the "C" command in their menu interface. When it asks for a source and destination, you can

use wildcards (* and ? like in most other DOSes) to copy more than one file at a time. You can also present no destination so that a file can be copied from one disk in drive 1 to another disk in drive 1, for example, and the DOS will ask you to insert each disk.
3. What are subdirectories?

Subdirectories are places where files go which are just like the normal directory of a disk, except the they happen to be WITHIN that normal directory, or even another subdirectory. For example, you can have your disk divided up into the "GAMES" files, the "GRAPHICS" files and the "SOUNDS" files. A directory of the disk (the "root" or "base" or "trunk" directory) will simply list the three subdirectories, "GAMES", "GRAPHICS" and "SOUNDS". Then, if you ask for a directory listing of the "GAMES" subdirectory, you will see the files (and perhaps other subdirectories) within the "GAMES" directory. Think of it as a tree. For people familiar with Macintoshes, "Folders" are simply subdirectories. A window which appears when you open a "Disk" Icon is the "root", and all of the "Folders" within it have more windows in them which also have file and folder icons.

Here's a comparison to using subdirectories on different DOSes

root 'GAMES' 'SPACE' within 'GAMES'
AtariDOS D: n/a n/a
MyDOS D: D:GAMES: D:GAMES:SPACE:
SpartaDOS D: D:GAMES> D:GAMES>SPACE>
MSDOS (IBM) \ \GAMES\ \GAMES\SPACE\

Note, only Atari DOS would be using drive 1 here, all other DOSes are not necessarily using drive 1, and MyDOS and SpartaDOS may already 'be within' a subdirectory.

In MyDOS and SpartaDOS (and MSDOS), you can change the 'current' or 'default' directory to a different place (a different drive or a subdirectory). "D:" can stand for "D1:" (like AtariDOS always does) or "D2:GAMES:SPACE:"! PLEASE READ THE MYDOS OR SPARTADOS DOCUMENTS FOR DETAILS ON THIS!
4. What does "P:", "E:", "K:", etc. mean?

As stated before, the Atari has devices. "D:" is added when a bootable disk in drive 1 is read. Other exist as well:
o C: Cassette
Readable and writeable, no filenames.
o D: Disk Drive
Readable, writeable, random access, directory, files, multiple devices (up to 9 on MyDOS and newer SpartaDOS, 8 on AtariDOS).
o E: Editor

Readable, writeable. This is how input from the keyboard
and output to the screen is normally handled. If you
wish to type a small file up by hand and have it sent to
the printer or a file, use "E:" as the source.
o G: Graphics Printer
Writeable. This is not built into the Operating System
but must be loaded. This is an Epson-compatible printer
driver which can easily dump graphics.
o K: Keyboard
Readable. This is just the keyboard. Input from it is
not `echoed' back like with the "E:ditor".
o M: "Multi-Mouse"
Readable, writeable? This is not built into the
Operating System but must be loaded. This is a handler
which runs in the background and accepts input from
either a mouse, a joystick or a touch-tablet and
displays a mouse pointer on the screen.
o M: "Multiplexer"
Readable, writeable. For Atari's connected to each other
via a "Multiplexer" local area network, the "MUX"
Operating System replacement provides an "M:" device for
computer-to-computer communication.
o P: Printer
Writeable. Send data to this and it will appear on the
printer. You can print files (documents, etc.) by using
"P:" as the destination. The Atari XL/XE OSes support
"P1:" and "P2:", although I believe this usage is rare.
o R: RS232 (COM port)
Readable, writeable, concurrent mode. This is not built
in to the Operating System, but is loaded. It supports
modems. The Atari 850 Interface has it's "R: handler"
'built-in', which means the Atari also looks for an 850
(or other compatible interface) and receives the "R:
handler" code from it. Other interfaces and the Atari
'direct-connect' modems require a file to be loaded
which contains the "R:" code. "R1:" and "R2:" is also
supported, but also its usage seems rare.
o W: Windowing (screens)
Readable, writeable. This is a graphics 8 graphical
windowing driver (rarely used, unfortunately!). It must
of course be loaded as well.
o Z: RTime8 Real-time Clock
Readable, writeable. This is also not built in to the
OS, but loaded. This is loaded from disk and lets the
user access the "RTime8" real time, battery-backed up
clock for the Atari 8-bit. (This is a cartridge-based
device). I am unaware of any "Z:" clone which let's you
set the Atari internal (non-real time,
non-battery-backed-up) clock if you do not have an
RTime8, although I'd love to see one! [hint!!]

5. How do I print something from DOS?

As stated above, just use the "C"opy command, then use the
file you wish to print as the 'source', and "P:" as the
'destination'. Example: "D1:DOCUMENT.TXT,P:"

-- Getting around on the Atari: BASIC --

What does "READY" mean?

Again, this is simply the prompt that Atari BASIC (and most older
BASIC's) presents the user when it is in "Immediate" mode.
* Entering a command will cause it to act immediately.
* Entering a line number and then a command will place that line
into the current program.
* Entering a line number alone will remove that line from the
current program.
* To start a program, use the "RUN" command.
* To erase a program, use the "NEW" command.
* To clear variables, strings and arrays, use the "CLR" command.
* To load a program, use the "LOAD" command followed by a filename
(see below). To load and run a program, use the "RUN" command
followed by a filename.
* To save a program, use the "SAVE" command followed by a filename.
* To list a program, use the "LIST" command followed by an optional
destination device ("D:file.lst", "P:"rinter) and an option start
and end set of lines seperated by (a) comma(s).

Where can I learn Atari BASIC?

A (set of) file(s) will be created explaining all of Atari (and Turbo)
BASIC's commands and their usage. (A larger file may be produced which
will be based on examples provided in the Atari BASIC Reference
Manual). (As of August 1, 1995, these particular files do not exist).

How do I quit BASIC?
* Type "DOS" to quit BASIC and return to DOS.
* Type "BYE" to quit BASIC and exit to the OS's "bye" routines
(Atari Memo Pad on 400/800's, Atari logo on 1200XL's, and Self
Test on other XL's and XE's). (Note: On 1200XL's, use [HELP] to go
to the Self Test when the Atari logo appears).
* Reboot with [OPTION] held down to disable BASIC. (For emulator
users, remember there are ways to totally disable BASIC.)

Why don't strings work?

Strings must be "dimensioned" like arrays in Atari BASIC. Strings are
special character arrays. See the BASIC usage/etc. files mentioned in
the answer to question 2. Simply put, to make a string that will
accept up to "#" character, use DIM [name]$(#). Example: DIM A$(10) -
now A$ can contain between 0 and 10 characters.

How do I make graphics?

Use the "GRAPHICS" command to switch between the following screen modes: (Note: All modes except 0, 9, 10 and 11 have four lines of 40 x 24 x 2 sized text covering the bottom of the screen. Add "16" to the mode number to remove this window (but do not make any PRINTs or PUTs to the standard output otherwise a GRAPHICS 0 screen will appear))

(Note: Add "32" to the mode number to keep the screen from clearing when it appears. One problem, however, all screens overlay each other so unless you only use certain modes at certain times, parts of some screens will become (or start out) with 'garbage' on them.)
* 0: 40 x 24 x 2 text
* 1: 20 x 24 x 5 text
* 2: 20 x 12 x 5 text
* 3: 40 x 24 x 4 graphics
* 4: 80 x 48 x 2 graphics
* 5: 80 x 48 x 4 graphics
* 6: 160 x 96 x 2 graphics
* 7: 160 x 96 x 4 graphics
* 8: 320 x 192 x 4 graphics
* 9: 80 x 192 x 16 luminence-only graphics
* 10: 80 x 192 x 9 graphics
* 11: 80 x 192 x 16 hue-only graphics
* 12: 40 x 24 x 4-colored text
* 13: 40 x 12 x 4-colored text
* 14: 160 x 192 x 2 graphics
* 15: 160 x 192 x 4 graphics

COMMANDS:

Commands available in Atari BASIC for manipulating simple graphics include:
* PLOT x,y - plot a pixel
* POSITION x,y - position cursor
* COLOR c - set drawing color (c=color or character value)
* DRAWTO x,y - draw a line from cursor location (set with "POSITION", "PLOT", "DRAWTO" or "LOCATE")
* LOCATE x,y,r (where r is where result will be stored)
* SETCOLOR c,h,l (c=palette location, h=hue, l=lum)

COLORS:

Note: COLOR command colors are not identical to SETCOLOR command colors:
* COLOR 0 will draw using the background color, set with SETCOLOR 4,hue,lum
* COLOR 1 will draw using color "0", set with SETCOLOR 0,hue,lum
* COLOR 2 will draw using color "1", set with SETCOLOR 1,hue,lum
* COLOR 3 will draw using color "2", set with SETCOLOR 2,hue,lum

Except in GRAPHICS mode 10, where COLORs 0, 1, 2, and 3 must be POKEd into memory locations 704, 705, 706 and 707 (the player/missle

graphics color locations). Examples of this will be presented in the
BASIC usage files. (Sorry)

How do I make sound on the Atari

Remember, XFormer 2.5 doesn't support sound! (XF3.0 does)
But anyway, in Atari BASIC: SOUND c,p,d,v
* c=channel (0-3)
* p=pitch (0-255)
* d=distortion (0,2,4,6,8,10,12 or 14)
* v=volume (0-15)

The buzzer character is CHR$(253) aka [CONTROL]+[2] (NOT
[CONTROL]+[G])

How do I move the cursor and edit?

The Atari "E:" device (standard input/output which is the "editor")
allows the following characters for editing:

Key: AtASCII #: Use:
---------- -------- ----------
Atari none Turn inverse on/off (Atari 400/800 kybds)
Inverse [Triangle] none Turn inverse on/off (Atari XL/XE kybds)
CAPS none Turns caps-mode to lowercase (400/800 OS)
CAPS none Toggles caps-mode from upper to lower (XL/XE)
Sh-CAPS none Turns caps-mode to uppercase (all OSes)
Ct-CAPS none Turns caps-mode to [Control]-[Lock] (all)
Up ([^-]) 28 Move cursor up
Down ([^=]) 29 Move cursor down
Left ([^+]) 30 Move cursor left
Right ([^*]) 31 Move cursor right
Space 32 Move cursor right (overwrites w/Space char)
BackSpace 126 Move cursor left (deletes previous char)
Delete ([ShBkspc]) 156 Deletes a (logical) line (1-3 physical lines)
Insert ([Sh>]) 157 Inserts a physical line
Ct-Delete ([^Bksp]) 254 Deletes char under cursor, pulls rest left
Ct-Insert ([^>]) 255 Inserts space under cursor, pushes rest right
ClearScn ([^<]) 125 Clears screen
Bell ([^2]) 253 Sounds buzzer
TAB 127 Moves cursor to next TABstop
ClrTAB ([^TAB]) 158 Clears any TABstop under cursor
SetTAB ([ShTAB]) 159 Sets a TABstop under cursor
ESC 27 Sets ESCape (next edit char after is shown,
not done, non-edit chars shown (like normal))
RETURN 155 Sends End Of Line (moves cursor to lowerleft
of next line, accepts input)

Note: Inverse characters have values of the normal version of the
characters plus 128. (The only non-viewable inverse character is
inverse-ESC, or what would be the [ESC],[RETURN] combination. The
character exists, but must be set into screen RAM by hand. Oh well, at

least you still have 255 easily viewable characters! [grin])

How do I make the editor characters appear

As shown above, you must have an ESC sent before them.
* When simply entering text, type [ESC] then the edit key and the character for that edit key should appear.
* When entering text in a PRINT statement, you must have it send an ESC beforehand, so first type [ESC],[ESC] to make an ESCape character appear, then type [ESC] then the edit key and the character for that edit key should appear.
When the PRINT statement is executed, the first ESCape (which you typed as two [ESC]'s) will make the editor SHOW the following character (even if it is an edit character), then the character which you entered (with [ESC] and then the edit key) will make that character appear. This makes it difficult to align a set of PRINT statements which make a multi-line picture or menu which uses viewed edit keys.
It is probably best to have all of the lines in your program with the PRINT statements that can fit visible on the screen, then edit them (without putting any of the ESCape characters in, then when the picture looks like how you want it on the screen, move the cursor to on top of each edit-key character and press [Control]+[>] (Control-Insert). A blank space should appear under the cursor and the rest of the line should move right. Now, type [ESC],[ESC] and an ESCape edit-key character should appear where the blank space was. When you are finished doing that for each line with those PRINTs in it, BE SURE TO ENTER THEM INTO THE PROGRAM BY PRESSING [RETURN] ON EACH OF THOSE LINES! Whew!

Set the memory location "766" to "1" with the command "POKE 766,1" to turn on the no-edit mode (ALL characters except End Of Lines will appear, even ClearScreens!) When you want to go back into normal mode, set the location back to "0" with "POKE 766,0".

What's with the colors changing?

THIS IS THE FIRST EVER SCREEN SAVER! This is called "Attract mode" as was used on the Atari 2600 and Atari 400/800/XL/XE series (and probably on the 5200 and 7800 but I cannot confirm this). When a key hasn't been pressed for 7 or 9 (depending on OS, model, etc) minutes, the screen colors begin changing, thus protecting your TV or monitor from having an image burned on it.
* To turn this mode off, press a key, or, if within a program, use the command "POKE 77,0" at least once every few minutes (IF the screen is active, otherwise turning it off would be kinda useless).
* To turn it on, wait 7 or 9 minutes without pressing a key or having location "77" set to "0", or set location "77" to "128" with "POKE 77,128", voila! instant attract mode!

How do I access 'devices' on the Atari?

The following commands are available to Atari BASIC's (and also
variations on these are available in most other Atari languages!):
* OPEN #a,b,c,d$
Opens channel 'a' for access to 'd$' in mode 'b' with auxillary
mode 'c'. Channel 'a' must be free or else a 'Channel already
open' (129) error will occur. To explain the different "modes",
here are simply some examples:
+ OPEN #1,4,0,"K:"
Input from keyboard
+ OPEN #2,8,0,"P:"
Output to printer
+ OPEN #3,12,0,"D:FILE"
Random access to disk
+ OPEN #4,9,0,"D:DATA"
Append-output to disk
+ OPEN #5,13,0,"R:"
Concurrent to RS232 (modem)
+ OPEN #6,6,0,"D:*.TXT"
Directory access to disk (reads directory of "*.TXT" mask)
* CLOSE #a
Closes channel 'a' (freeing it for use)
* GET #a,b
Reads a byte from channel 'a' and stores it in 'b'
* PUT #a,b
Puts byte 'b' onto channel 'a'
* INPUT #a,b$
Reads a string (up to 255 bytes and a REQUIRED 'end of line'
(character 155)) from channel 'a' and stores it in 'b$'
* INPUT #a,b
Reads a string (up to 255 bytes and a REQUIRED 'end of line'
(character 155)) from channel 'a' and stores the numeric value of
it in 'b'
* PRINT #a,[stuff]
Just like the normal BASIC PRINT statement, but sends the
information to channel 'a' (semicolons, comas, and mixed types are
of course allowed).
* STATUS #a,b
Reads the error 'status' of channel 'a' and stores it in 'b'
* XIO a,#b,c,d,e$
General I/O call. This a little complicated and may be expanded
upon in a future revision. Just be aware of the following:
+ a - command
+ b - channel to use (usually must be free)
+ c - auxillary mode 1
+ d - auxillary mode 2
+ e$ - file or device to act upon
Examples:
+ XIO 32,#1,0,0,"D:FILE,OLDFILE" renames file
+ XIO 33,#1,0,0,"D:OLDFILE" deletes file
+ XIO 34,#1,0,0,"D:GAMES" creates a directory in My- &
Sparta-DOS

+ XIO 35,#1,0,0,"D:NEWFILE" locks a file from over-write and
deletion
+ XIO 36,#1,0,0,"D:NEWFILE" UNlocks a locked file
+ XIO 40,#1,4,0,"D:PROG.OBJ" loads and runs a binary file (like
"L" in Atari and MyDOS)
+ XIO 40,#1,5,0,"D:PROG.OBJ" loads a binary file (like "L" in
Atari and MyDOS with the "/N" option)
+ XIO 41,#1,0,0,"D:GAMES" changes default directory that
drive/subdirectory (all calls to "D:" will now occur within
that drive/directory)
+ XIO 254,#1,0,0,"D2:" FORMAT a disk (in Atari DOS 2.5, this is
format 'enhanced', to format 'single' density, use XIO 253)
(in MyDOS, this is format, but not 'enhanced', use:
+ XIO 253,#[channel],1,0,"D[drive]:" for formatting a drive in
enhanced mode).
NOTE: 39 and 40 are the same. Also note the useage of AUX1 in the "XIO
40" example.

-- Getting Atari files to an IBM: --

1. How can I read Atari disks on my IBM?

Note: Someone please give more details or corrections here!
Thanks!

If you have double-density Atari disks, you can use the program
"Util" on the IBM which can read double-density Atari disks.
Please see the Atari 8-bit FAQ for more details.

If you have an Atari 1050 disk drive, you can use the program MULE
to copy files, one file at a time, 20k chunks at a time, from the
Atari to the IBM. You first must format a 180k disk on your IBM,
the run MULE on your Atari to get a file onto the MULE disk, then
run MULE on the IBM to get the file onto the IBM. Tedious, isn't
it? MULE wasn't meant to be a fully-functional program, just a
demo to show that this was even possible.

If you're fortunate to have a Black Box interface on your Atari,
you can get an external IBM drive and the Black Box's add-on, the
Floppy-Board and simply copy files from your Atari disks or hard
drive(s) onto IBM disks via the floppy board, then load them up on
your IBM.
2. Ok, I can't do any of that, now what?

You can use SIO2PC, which is a program for IBM's which turns your
IBM into a set of Atari disk drives. You need the SIO2PC cable
(which you can purchase, assembled or unassembled, or buy parts
and build it yourself) and the SIO2PC software (available at
UMICH). Connect your IBM to your Atari, load SIO2PC, and then run
the program FILE2PC on the Atari to transfer files to the IBM's
hard drive. Or instead create a disk image within SIO2PC and copy

files from one disk (a real Atari floppy) to another (the SIO2PC image) with the Atari or MyDOS "C"opy command. If you want to extract files out of the SIO2PC disk image file and store them on your IBM's hard drive or floppies as single files, either again use FILE2PC or use S2PC, an IBM program which can extract files from or add files to MyDOS-compatible SIO2PC disk images!

You can use two modems (one on your PC and one on your Atari) to download files from your Atari 8-bit.

If you don't necessarily want files that you already have on your Atari 8-bit, you can download files from the huge collection available at FTP sites and Atari 8-bit supporting bulletin boards and save them onto your IBM.

If you have only one modem, so you can't connect both your Atari 8-bit and your IBM together via modems, you can do it via null-modem, OR you can upload files from your Atari to some bulletin board or account you have access to, and then connect the modem to your IBM and download the files.
3. Is there any easier way to get Disk Communicator (Atari disk image) files to and from SIO2PC disk images or PC Xformer XFD disk images other than using Disk Communicator 3.2 on my Atari! I mean, both files are disk images! They're both on my PC's hard drive! [cry]

(AND NOTE: DiskComm. doesn't like SIO2PC a lot of the time anyway!)

Yes! There's an IBM program out called "DCM2DSK". (Why "DSK" and not "ATR"? To keep people from getting confused with the ATR-8000(?))

There's also C source to a very similar program called "DCMTOATR" which works on PC's (a PC executable version comes in the archive) and Unix and probably any other system with a good C compiler.

2532. Re: Hypocrites Rule The Net - Part II

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-01 00:00:00 UTC
From: necronus@erinet.com
Message-ID: <4m75ne$2ge@eri2.erinet.com>
Source record: 84159

On 29 Apr 1996 15:25:58 -0600, thester@nyx10.cs.du.edu (Uncle Fester)
mumbled something like:

>>Subject: Re: Let's Trade Files - Part II

>> After receiving the initial missive pertaining to
>> the alleged "illegal" activity that I am supposedly
>> engaged in, I pointed out that the files in question
>> are not obtainable through any retailer or other
>> official source. I got this in reply:

>>>This is not a matter for debate. It is illegal to give away copies
>>>of copyrighted materials without permission of the copyright holders.

>> How in the hell does anyone know that I don't have
>> their permission?

Lessee... In the first page of files alone, you mention that you have
available Archon I and II. Isn't Electronic Arts still around? Oh,
and let's not forget BallBlazer, by LucasFilm...

>> How does he know that the material in question may
>> actually be "copyrighted". Presumption only.

Because it expressly says that it is copyrighted on the title screen
of most games (get glasses; it may help!)

>> Hypocrites in action.

Hmmm... Lemme see if I got this right... They are being hypocritical
about a program being copyrighted, even though the program is
available in no other fashion? I suppose that photocopying a complete
book isn't ripping anyone off, right? Even if the book has been out
of print for years?

>>
>>>If there are any other users from Nyx giving away copies of copyrighted
>>>materials through their Nyx account without the permission of said
>>>copyright holders, they will be dealt with in -exactly- same manner.

>> Exactly the same hypocritical manner, I guess.

Hypocritical, of course, if it happens to be YOUR chops being
busted...

>> Look for Uncle Fester to make a Big Ass[tm] of both
>> himself *AND* his UseNet 'pusher' (Nyx) in ways never
>> before dreamed possible for such an insignificant

>> little corporation. (Yes-Big Ass Technologies is a
>> real incorporated business-but it doesn't sell a dang
>> thing-yet)

Why wait for you to make a big ass of yourself to the public when you are doing such a great job of it in here? Please, continue your whining! If nothing else, it breaks the monotony of actual intelligent conversation that most of the usenets normally carry...

>> Big Ass Technologies, UNlimited is re-tooling the "production
>> line" for the introduction of an innovative little
>> bit of irritating 'fluff' that uses a form of stealth
>> technology to grow into a HUMONGOUS mass of irritating
>> 'fluff'.

[rest of message and inane .sig snipped]

The only fluff observable is that which is popping out of your ears!

2533. Faq???

Could someone please post the 8 bit faq or send it to me?

Thank you very much

2534. Q: Atari 5200-7800-8bit

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-01 00:00:00 UTC
From: glennb <glennb@interport.net>
Message-ID: <3187DBA8.467D@interport.net>
Source record: 84161

Hi maybe someone can clarify this for me...

It was my understanding that when the Atari 5200 came out it was
essentially
the Atari 8 bit computer (400/800/XL) with some minor changes in a video
game box. Great.

What then was the 7800? More specifically how did it differ form the
5200/8
bit computers?

Thanks,
Glenn

Copyrights DO expire. If the copyright is not renewed, then technically
the material becomes Public domain.

I think the life of a copyright is 19 years or 27 years or it might depend
on the type of the copyright. So most software is still under copyright,
but in a few years alot of this classic software could start becoming PD.

2536. Re: Disk image file question

In a previous article, mgorelick@pmh.com (Marc Gorelick) says:

>Hi!
>
>I have carefully read all the FAQs I can find and still have a couple of
>questions for other folks reading this newsgroup. Hope someone can help me
>figure these out!
>
>1. I've got a couple of files that have .PRO extensions, but can't find
>anything that looks like it turns this type of file back into a disk. Since
>I'm actually using an Atari and not an emulator, I'd need a way to do this on
>the Atari itself. Which leads me to...

.PRO Images are Protected Disk Images for use w/ APE 1.07 and greater. They
contail all the protection information of the original disk read in a
'peephole' type manner, and are for _emulation_ only and cannot be
turned back into original disks. PRO is an emulation format, not an
archival format if you want to get technical :)

To use .PRO images get a copy of APE from http://www.nacs.net/~classics.

Also please read the users manual available there, as it will answer
many of your questions regarding disk images and emulation.

>2. I also have a few .ATR files and an .XFD file. These would be
>great if I wanted to use the XF2 emulator, but I don't. I'd like to turn these
>into .DCM files or some other helpful format...but how?

You can convert ATR/XFD images _directly_ to .DCM archives by using Imagic
1.02. Its available at the URL above. If you dont have Win 95/NT
installed, see the suggestion below.

>The only thing I can
>think of is to use a utility like "Disktran" (old utility I used to use to
>transfer a whole disk, sector by sector) on both the real Atari and an
>emulated Atari and send it via serial. Is there another solution?

You can use APE and load the disk image as drive 1, and use any sector
copier with your REAL 1050 as drive 2 and just copy from the disk image
to the real disk.

>Thanks much for any help you folks might have to offer!

When you're talking about one of the very few remaining Atari dealers left in the world, personality of salespeople is low on my list of priorities. If they have what I want for a price I'm willing to pay, I buy it. "Rudeness" is one of those pride issues that isn't cost effective. Let it go and buy the damn power supply, even if it takes a few weeks. Otherwise, list your number. Life is full of trade offs.

> slight detour.

Yes, it is a bit on the extreme side. I stopped buying from B&C
for over a year (back when I was spending over $200 per month, so they
lost a bit of profit). I was not only angry with their payment policy, I
was upset with the woman I spoke with, as she treated me as rudely as she
treated you.
Then, about a year later I wanted an Okimate 10, and I wanted it
bad. BEST and Toad didn't have them, so I broke down and called B&C.
This time Bruce (the "B" of B&C - the woman is the "C" part, but I don't
know her full name) answered the phone. He said he didn't have an
Okimate 10, but they had the Plug 'n Print module (which they'd had for
several years without selling it - I know, I used to visit their store
when I lived in northern CA). Bruce said he'd seen an Okimate at one of
the ubiquitous surplus electronics stores in that area. He offered to go
buy it for me, and sell me the package (at a profit, of course, which I
don't begrudge any company). I was so pleased and impressed with this
effort at customer service that I decided to inquire about payment
methods. After all, I didn't want to wait over a month (after the 3 week
check holding delay and shipping both ways) for my Okimate!
Bruce took care of it. He cleared it in the computer for me (he
said that once you buy from them and get into the computer, they accept
credit cards whether you are listed in the phone directory or not), and I
haven't had trouble with them since.

Perhaps, if you talk to Bruce, you can get some leniency. Or,
offer to make a purchase now via check on the promise that you will have
no future problems with credit.
With so few Atari 8-bit stores around anymore, it is difficult to
avoid dealing with B&C. And, they really do have a great selection.

Well--I think most of us know the "law".
What is upsetting to me is while sysadmins claim that
there is no way they can monitor what goes on in newsgroups
they managed to find me, didn't they?
The CDA is being challenged not only on the grounds of
the vague meaning of "decent", but because sysadmins
claim to be like the telephone companies in that they
can't monitor how its used. Now, I know that they probably
didn't personally watch me, but rather, I was snitched
upon. So--how come pornography newsgroups are allowed
to exist, yet at the same time, sites don't allow the
"warez" groups? This is the hypocricy of UseNet.
As for the porn, they say, "Oh, use Net Nanny" because we
don't have time to screen out kids. I constantly see
the words "don't have time" repeated over and over on
these issues. When did they make time for Uncle Fester?
While I know the ultimate reason for my being singled out
was sheer vengeance and vindictivness on the part of some
local site user because of my history on Nyx, it still
speaks for itself about just how much "time" these sysadmins
have WHEN IT SUITS THEIR PURPOSES!!!

Uncle Fester

.PRO files are images of copy-protected disks, which can only be used with a PC and Steven Tucker's APE software. He can tell you all about it (e-mail classics@nacs.net)...

Yeah, me too. As far as I know, DCM to ATR is a one-way street, as is DCM to XFD. I wish somebody would hack something together to create DCMs from the raw image files. Shouldn't be hard, you'd just need to know the specs of the DCM format... (Hint, hint.)

About EA 'Marble Madness'. I have an old list of commercial software.
I find EA 'Marble Madness' for C= 64/128, Amiga and IBM, but not for
Atari or ST. I think that if anyone has Marble Madness for the 8-bit,
it was some pre-release thing. Somebody said it did come out for the
ST, but wasn't very good. I would bet the Amiga one is the best.

: It was my understanding that when the Atari 5200 came out it was
: essentially the Atari 8 bit computer (400/800/XL) with some minor
: changes in a video game box. Great.

Actually - the end result is minor in its changes, but the actual system
had a totally different memory map, and analog (instead of digital) joysticks.
But.. yeah.

: What then was the 7800? More specifically how did it differ form the
: 5200/8 bit computers?

Pretty much in the same way that the 2600 differed from the 5200/8-bits.
The 7800 is to the 2600 what the 5200 is to the 8-bit. Actually, more
reverse - it wasn't a scaled-down-and-different machine (like the 5200 was
compared to the 8-bits), it was a very sleek souped-up 2600-compatible.
(I believe you can simply plug in 2600 carts and go, actually!) But it
added a lot of features that even we 8-bitters wished we had! (Like
horizontal display list interrupts along with the vertical ones we have
already).

If the work was authored after 1978, the copyright lasts for
the author's life plus 50 years, non-renewable, unless it was a
work for hire, in which case it's 75 years from the date of creation.

2552. New Utility for Managing Disk Images

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-02 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <318891CA.5D01@rcp.co.uk>
Source record: 84179

The first release of ImageMan is available from:

http://www.netlink.co.uk/users/helix/atari8/

ImageMan is a AtariDOS/MyDOS disk image (XFD/ATR) manager
for PC's running MSDOS. It features:

* Loading/Directory of SD/ED AtariDOS/MyDOS images
* Creating blank AtariDOS formatted SD images
* Converting XFD<->ATR
* Adding files to the image (useful if you have just
downloaded one from an FTP site etc) (currently only
works on SD images)
* Deleting files from an image (currently only works
on SD images)
* Extracting files from an image.

Features coming next version:
* Undelete (this can currently be achieved by extracting
the deleted file and adding it again assuming that the
deleted file has not been partially overwritten)
* Creating, Adding and Deleting ED images.
* Converting an SD image to ED.

Future features:
* Support for higher densities
* Any comments/suggestions from users.

2553. Cartridge Portcard for PX Xformer

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-02 00:00:00 UTC
From: rely@ix.netcom.com
Message-ID: <4ma8cf$6o7@dfw-ixnews4.ix.netcom.com>
Source record: 84180

Has anyone tried or thought to try to build a cartridge port expansion card for PCs to work with PC Xfromer? I happen to love SpartaDOS X and BASIC XE. Of course, neither can be used with PCXF. I have to build the programs on my 130XE then x-fer them to my PC to use them. That's not fun. I'd like to be able to edit the programs on the PC too. Unfortunately, I can't have the 130XE at work.

Bob Puff or Mike@FTE are you guys listeniing?

rely@ix.netcom.com Atari user/enthusiast since 1982!

2554. Alternate Reality: I'd like to play this one

Uncle Fester,
Don't get yourself all heated up. I know it is
embarrassing to get 'busted' by your sysadmin. I know that
your internet provider has all those smut sections, but
won't carry 'alt.binaries.comp.atari8bit' (the other one,
alt.binaries.atari8bit.warez never was available anywhere,
but briefly.) We on csa8 have been thru the copyright
debate continuously, ad naseum. Nobody posts to
alt.binaries.comp.atari8bit anyways. So, I think you wanted
to trade stuff. I can't do that, but if you e-mail me, I'll
tell you how to get just about anything you want ('Marble
Madness excluded.)

Source record: 84186

The 1200XL Atari can use a lot of different drives. If it's the same color as the computer, it's probably a model 1050 disk drive. B&C Computervision at 408-986-9960 has the original owners manuals for almost all Atari machines, but you would want a repair type manual. B&C also has the SAMS Computerfacts hardware manuals for the repair of drives and computers and they also sell the actual Atari field service manuals. Neat, huh?

Define cheap. I think $5 for original software is very fair and
when you add in shipping a box full of software could easily cost
you $100. I have some if you are still interested.

Does anyone know where I might find a good 6502 disassembler
for the PC? I wanted to poke around some old Atari 800
executables to see how they did things.

Thanks.

You're right. I kind of overextended myself there.
Most of the flamage was directed here at my local
group of hypocrites and *not* at csa8 at large.
I apologize for making an ass of myself, but that's
what I do best. Hence, my org. :-)
If you've been through half of the bone-headed
personal attacks that I've suffered from at the hands
of the so-called 'academicians' of Nyx, then you'd
understand and probably be as thin-skinned as myself.
The "Free Speech Policy" here is like Orwell's "Animal
Farm"--"Some animals are more equal than others."
I'm one of the lesser "animals" of Nyx and will never
belong to the ruling clique.

Btw--I'm back down on earth now. :-)

Uncle Fester

The 5200 was the same as the 400/800, except it had much less of an operating system, and some
of the custom ICs were remapped to different locations. There were a fair number of 5200 games unofficially ported to the computers (Xevious comes to mind) by "Glenn the 5200 Man". The 7800 was closer to the 2600, a I recall, able to emulate the 2600 but also run new software with over 100 sprites.

I believe the law reads as follows. If a software vendor has gone out of business, the copyright covering the program is no longer valid. This is due to the fact that the copyright is given to the corporation, not the individual who wrote it. If in fact then, the business legally disappears, so does the copyright. Therefore, the programs can be distributed without any legal ramifications. If the copyright was given to an individual, then you have no right to copy and distribute.

Anyone care to refute this.

I discovered by accident sorta, that Sega control pads are compatible
with Ataris. I tried one on a 2600 and it worked fine, and since the
computers have the same joystick ports as the 2600, the Sega controller
should work on your 800XL.

The interesting thing here is that this new drive is
compatable with any computer currently using 720k (3.5) diskettes. I
wish I had the time to check into this more throughly, but it would
seem that current owners of 720k drive controllers might be able to
use this LS-120.

Hello...
I downloaded the "drunk tank" demo ans some others, the music is great..
but the screen "flicks" when one of the voices is activated... I think
that was a bug in the program, but the problem also prestnts in the
german demos fom TOP magazine an the "l'orneta demo" .

I think that this problem is for running this in a NTSC atari and
programmed in PAL ataris but I'm not sure

anybody knows how to fix it ?

Well Maybe not a real program but a ms access database ole'd up
the wazzoo. Just sumthin goofy i'm doin in my spare time. I've allready made
some access stuff for like sio2pc, but sio kinda sux under windows. Right now I
can echo key strokes from access into sio2pc. Kinda cute, like to load i just
pick a file name in a list, hit the load button (side 1 or 2 selectable.. the
button echos "U 1 L 1 filename.atr" for that paticular disk. To flip a disk I
just hit my flip button. Still can't drag-n-drop but its cool anyways.

Hey any Derricks out there??
My pop sez your a windows programmer or sumthin. Anyways use some of that
high powered Bill Gates stuff and make your emulator fly for the folks. Try
somethin like this (kinda like my sio2pc loader.

gets some real pics of some 1050 drives and the silver keys on the atari.
Arrange them like this.

<1050> <1050> <1050> <1050>
1 2 2 4

<silverkey><silverkey><silverkey><silverkey><silverkey>
reset start option select break

Down here is the atari screen

---

make some disk flip buttons, let people activate the start option such and such
with a mouse. Anf for the Kings sake please make it drag and drop. Oh yeah i
also forgot the eject switch on the 1050.

Ahhhhhhhhh. I wish everyone could n-joy windows. I would rather
play any atari game while downloading instead of solitare.

zap zam zowie bOOm crash mash zonk kaboom. I've been hangin out in the
dungeon 2 much man. My AR access database just needs a few more things. Like
good graphics and real music. Even though its runnin on a 486 the maze stuff is
coming along quite nicely. However my artwork is at best cheesy so i am very
sadddened by that.

Hey Gary Gilbertson! How bout hoppin on the old black and white teeth
and jammin me out some tunes? For that matter anyone that can play the old ar
stuff.

One thing Atari users have more of than any other computer group.

> archival format if you want to get technical :)

I see...As I mentioned, I was looking to use these files to create actual disks for my 800, so I'll probably just pass on the .PRO files. Perhaps I can find these same programs in another format someplace.

>You can convert ATR/XFD images _directly_ to .DCM archives by using Imagic

The 7800 had something called the "Maria" chip, which allowed for hundreds of sprites. I think it also used the "Amy" sound chip which offered better sound and music. There might be other enhancements too.

>software with over 100 sprites.
>

The 7800 wan't really "closer" to the 2600, it just had the necessary built-in hardware needed
to run 2600 software. It was, in fact, far more advanced than the 8-bit computers, and
it was originally scheduled to get a computer keyboard and use standard SIO peripherals.
Unfortunately, old Atari fell ill at about the time the system was to be released and the
7800 sat on the shelf for another two years until new Atari finally released it. But, by then
it was too little to late, with new Atari unwilling to port newer games to it, and the NES was
able to eventually swallow up the 7800 because IT got the titles that were in the arcade. It's
really a shame -- the 7800 is a beautifully designed successor to the 8-bits.

I need not point out the similarity to the Jaguar; that's another story...

-Michael Ellis

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

2587. Re: Cartridge Portcard for PX Xformer

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-04 00:00:00 UTC
From: mgorelick@pmh.com
Message-ID: <4mecoq$lg6@alterdial.UU.NET>
Source record: 84114

In article <4ma8cf$6o7@dfw-ixnews4.ix.netcom.com>, rely@ix.netcom.co says...
>
>Has anyone tried or thought to try to build a cartridge port expansion
>card for PCs to work with PC Xfromer? I happen to love SpartaDOS X and
>BASIC XE. Of course, neither can be used with PCXF.

At the risk of going off on a tangent:

Wouldn't it be possible to store the ROM image of a cartridge like Basic XL (from OSS) or whatnot, transfer it to a PC, rename it "ATARIBAS.ROM" and away you go?

I'd have tried this instead of just asking about it, but I still have no 850 interface :-(

2588. Anybody want...

Newsgroup: comp.sys.atari.8bit

From: mgorelick@pmh.com
Message-ID: <4medpr$lg6@alterdial.UU.NET>
Source record: 84115

I have a 1010 cassette recorder and an "Ape Face" printer interface that I have no use for. I'll trade it for virtually anything of use...hell, you can have it if you'll pay for the shipping.

Email me back if you want either item.

2589. Atari 8-Bit Computers: Frequently Asked Questions

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-04 00:00:00 UTC

This file may be reproduced, in whole or in part, so long as the content of
that portion reproduced is not modified, and so long as credit is given to
this FAQ list or its Maintainer, or the author of that section reproduced
when given.

The Atari 8-Bit Computers Frequently Asked Questions List was created to
provide answers to many commonly asked questions found in the Internet's
comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group. It is in
a constant state of development, and comes with no guarantees. If you
see any problems, I need to hear from you!

Telnet
5.1) What is the Cleveland Free-Net Atari SIG?
5.2) What is the Youngstown Free-Net Atari SIG?
5.3) What is the National Capital Free-Net Atari Users SIG?
5.4) What is the Victoria Free-Net Atari Computer Users SIG?
5.5) What is the Closer To Home BBS?
5.6) How can I access the World Wide Web by Telnet?

World Wide Web
7.1) What WWW pages support the 8-bit Atari?

IRC
7.9) What IRC channels discuss the 8-bit Atari?

Online Magazines
8.1) What is the CAIN Newsletter?

8.2) What is Classic Atari OnLine?

File Formats
9.1) What's this UUEncoding stuff (.uu, .uue files) all about?
9.2) What is an .arc file?
9.3) Okay, how about a .dcm file?
9.4) What is an .xmo file?

Emulation
10.1) What 8-bit Atari emulators exist for other computing platforms?

File Transfer Solutions
11.1) What are the best terminal emulators available?
11.2) Can I read/write 8-bit Atari disks on an IBM-PC?
11.3) Can I read/write MS-DOS disks on an 8-bit Atari?
11.4) How do I transfer files using a null modem cable?

Storage Media
12.1) What 5.25" floppy disk drives are available?
12.2) How can I use 3.5" floppy disks with my 8-bit Atari?
12.3) What do I need to connect a hard drive to my 8-bit Atari?
12.4) How can I use an IBM-PC as a storage device for my Atari?

General Interest
13.1) What's the best DOS for the Atari?
13.2) What hardware has Atari created in the 8-bit computer line?
13.3) What are the power-supply requirements for my Atari components?
13.4) What are the pinouts for the...?
13.5) What BBS software can be used on the Atari?
13.6) What version of Atari BASIC do I have?
13.7) What are the Standards for Used 8-Bit Stuff?

Other Documents of Interest
14.1) What vendors, developers, or publishers support the 8-bit Atari?
14.2) Where is my nearest 8-bit Atari BBS?
14.3) Where is my nearest 8-bit Atari user group?
14.4) How do I use my new or emulated Atari?
14.5) What prominent Atarians are reachable by e-mail?

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

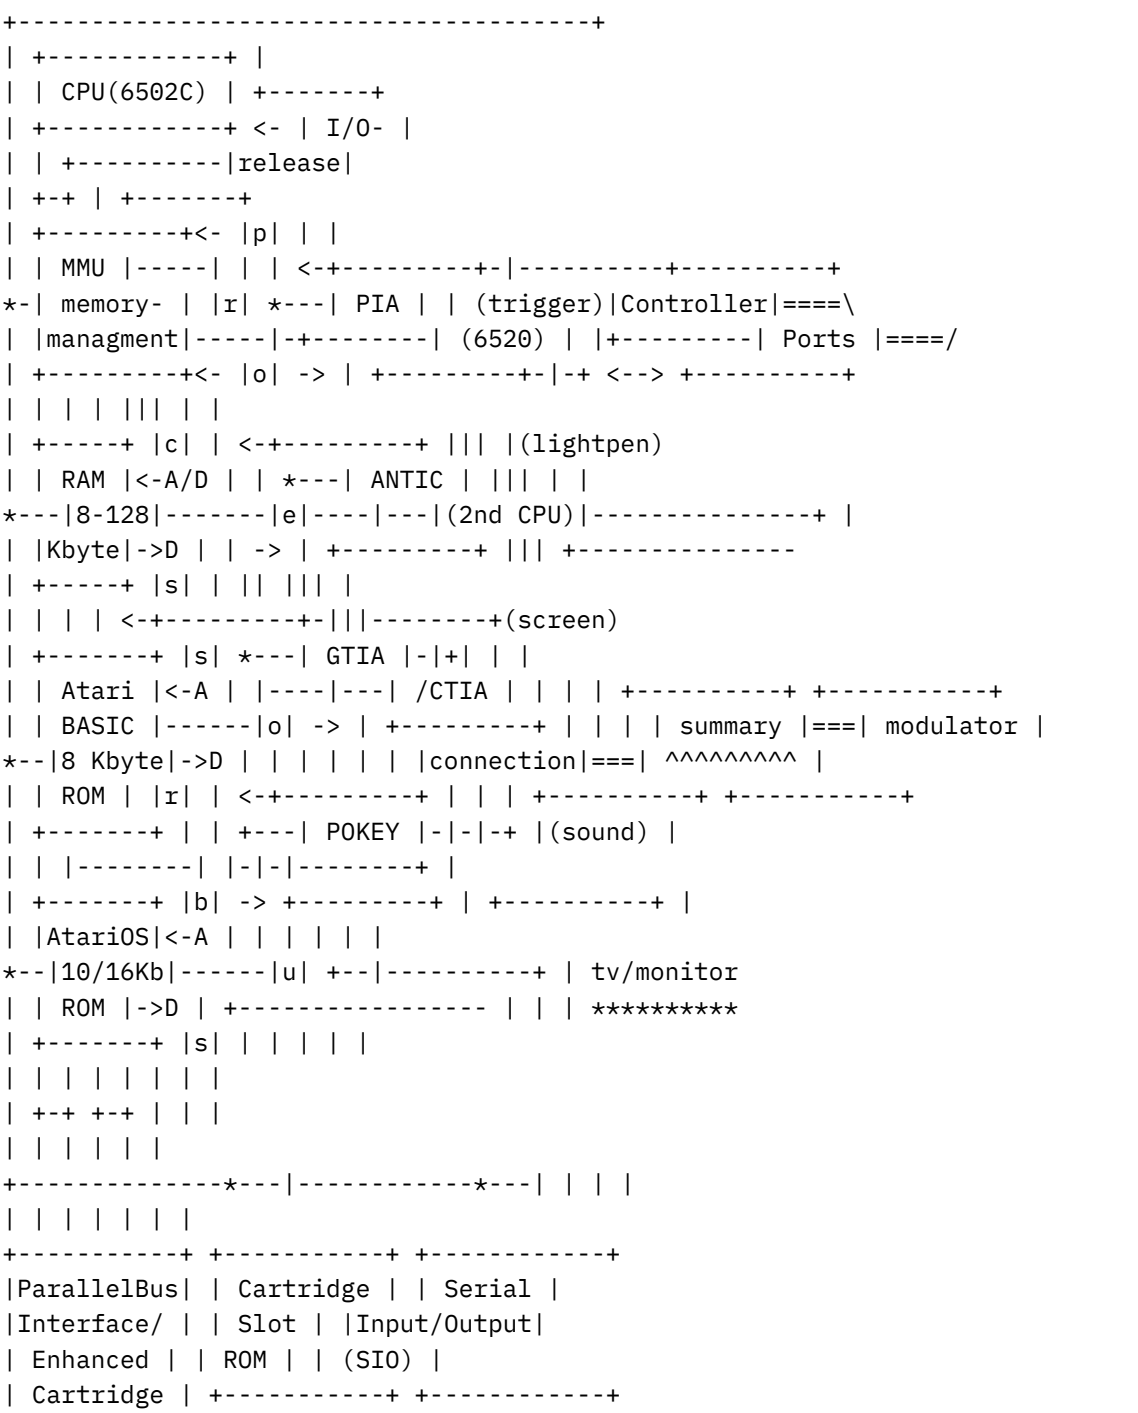
All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which

bank of memory RAS goes to. Why people say freddy does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement

With thanks to mailto:peter@soemtron.sb.sub.de (Peter)



| Interface | | |
+-----------+ | |
| | |
- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Beginners at using the 8-bit Atari platform may wish to contact Bill Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4, 160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also supported. 40 x 24 x 256-character (128 normal, 128 inverse, character set indirection available) text mode is standard (2 colors).
40 x 24 x 128-multi-colored-character (4 colors per character allowed, the other 128 characters have 4th changed into a color 5) and
40 x 12 x 128-multi-colored-character screen modes are available.
GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only, and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics

15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen
modes are available.
Screen modes can be mixed (by lines) down the screen using the Display
List - a program which is executed by the ANTIC graphics chip every
screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd, URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command to LISTSERV@MARIST, or by sending a message to URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please note that this command must NOT be sent to INFO-A8@MARIST or to info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX INFO-A8" command to LISTSERV@MARIST or by sending a message to URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can then be retrieved by means of a "GET INFO-A8 filetype" command, or by using the database search facilities of LISTSERV. Send an "INFO DATABASE" command for more information on the latter.

Recent copies are also kept at URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin.

Mail the text of your post to:

```
group.name-news@newsbase.cs.yale.edu
group.name@pubnews.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name@magus.dgsys.com (unverified)
group.name.usenet@hkucs92.air.org (unverified)
```

For example, to post to comp.sys.atari.8bit, you might send your message to:

comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Be sure to include an appropriate Subject: line, and include your real name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com (Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to mailto:listserv@info.cern.ch (older address) containing

the following single line. (What you put on the subject line doesn't
matter; blank is OK. This line should go in the text of the message.)
You will receive as a reply a simple page intended to help you learn
more about the Web.

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari
/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files (.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You might also suggest what permanent 8bit subdirectory you'd like your file to end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files (.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less) and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please name the parts in the subject line. This is really helpful as the parts usually don't arrive in the proper sequence. Also, please include a message labeled "file transmission," containing a short description of the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to have seen no uploads for years, but there are some files here that aren't on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no (Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson, mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock: ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 4.7) What is Preston Crow's ftp site?

Preston Crow keeps a small site filled with the latest utilities for manipulating .ATR and .XFD files.

URL:ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 4.8) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only)
on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

URL:ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National
Public Telecomputing Network. It can be accessed by any of the following:
telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or
telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are
automatically members of the official Atari user group C.A.I.N. - Central
Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains
the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari
Community E-Mail Directory" listing. Send correspondence and press
releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the Youngstown Free-Net Atari SIG?

Youngstown Free-Net (Youngstown, Ohio USA)
telnet://visitor@yfn.ysu.edu (192.55.234.27)

Type "go atari" to reach the Atari SIG. Write to
mailto:xx140@yfn.ysu.edu for more information.

Subject: 5.3) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.4) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.5) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.6) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not
here.

Subject: 7.9) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 8.1) What is the CAIN Newsletter?

The Central Atari Information Network Newsletter is the monthly online
magazine of the Cleveland Free-Net Atari SIG. The editor is Mark
Leair of the Atari SIG. 8-bit computers support is provided by Michael
Current and Craig Lisowski. For information, write to the Atari SIG at
mailto:xx004@cleveland.freenet.edu .

Subject: 8.2) What is Classic Atari OnLine?

Yes, a new Atari magazine. Classic Atari OnLine is a magazine that
is designed to help Atari experts to Atari novices and prints every
2 months. To download it goto:

http://ourworld.compuserve.com/homepages/dschmud/dsatari.htm

any questions eMail me at: mailto:dschmud@heartland.bradley.edu

----

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert
entire disk images into files. To work with .dcm files you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

Subject: 10.1) What 8-bit Atari emulators exist for other computing
platforms?

These are the four emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
URL:http://www.halcyon.com/brasoft/

2) PC Xformer 3.5, from Branch Always Software, for MS-Windows.
URL:http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari Emulator for Unix and Amiga, by David Firth
Latest version: 0.3.3
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.7 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of

]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt

Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin
port.)

The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'

side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

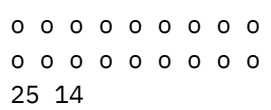
A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.



(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed but also pins 4 and 5 as well as 6 and 8. Or better

yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only

thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition
(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE
computers (and other, those have such connector). Tested with various
Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50,
SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications,
demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson

SIO2PC is a cable and software combination that lets you use your PC as up to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to 16 megs. SIO2PC also lets you redirect the printer output to your PC printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.04 is shareware by Nick Kennedy.
filename: sio404.zip

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.

XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari
components?

As with the rest of this FAQ list, please let me know if any of this
information conflicts with the units you have. I'm also not sure how much
of this section is valid outside North America. If it's not valid where
you are, I need to hear from you!

The most important information is the voltage (in volts) required, and
whether you need a transformer (AC output) or an adapter (DC output). The
power (in watts) and current (in amperes) specifications of the original
equipment as presented here should be regarded as minimum values.
Higher-than-specified power and current capacities are entirely usable,
and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE

cartridge in order to run. It is in the public domain and can import and export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only, control ATASCII graphics are reserved for message data-structure bytes). FOREM-XE BBS is still currently in use as we speak, and may be reached via the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM terminal program of days gone by. I am not familiar with this program. I think that it is written in Action! and only supports XMODEM Checksum transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/vendev/faq.html
news:comp.sys.atari.8bit news:comp.answers news:news.answers
mailto:mail-server@rtfm.mit.edu , message says:
send usenet/news.answers/atari-8-bit/vendev
quit

You can also ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

Rick Detlefsen is presently compiling a new comprehensive Atari computers bulletin board systems list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

Or by Mail: ATARI BBS LIST
C/O RICK DETLEFSEN
8207 BRIARWOOD LANE

>Listen, uncle SHITHEAD. I've been on "the net" since the only
>Internet providers were universities and the military. I *don't* like
>to see whiny little newbie lamers like yourself scream yourself blue
>in the face about your supposed "right" to anything, *especially* when
>you're apparently the only one who *deserves* this right.
>
My aren't we high and mighty? I guess we should all kiss your ass
because you were here first? Go collect your social security, old
fart. If you care anything about the internet you would know it is the
influx of "newbies" and then knowledge that they bring that makes the
net so much fun. I think what Fester is saying is that he wants the
"right" to say what he wants. Which seems to extend to all types of
pornography (even vile and sick shit) on the net, so why shouldn't it
extend to a "warez" list?
I forgot, you know everything, so you no one new to the net could
possibly teach you anything about anything. So sorry, master.

This is the last of the atari stuff that i have.

(1) Atari 400 + power suppluy. looks good, works good.
(1) 1010 tape drive + power suppluy & serial cable. works good.
(1) 1010 tape drive. parts only.
(4) learn basic cassettes. couple of I/O errors in loading on one tape.
(3) cartridges. Pac-Man, Donkey Kong, Basic Cartridge.

I wish to sell ALL of this stuff at once,
So i will not reply to offers on only some pieces.
E-Mail me back and make offer if interested.
Thank You.

I went there after hearing they are still in business...

I found them to be very, very courteous, helpful, and insightful.

I unfortunately blew $600 on 8-bit stuff in one shot, but at
the same time a proud owner of a prototype XC1411 composite
monitor......

I also saw there the rare XF35 3.5 8-bit disc drive...they just sold
it for $225, and I tried unsuccessfully to buy it....

I forgot who they said bought it, but I hope to run into this person
and perhaps pick it up form him (I hate 5.25 discs.....)

Anyway, this isn't a plug, just a fact that they had a great selection
and were very pleasant to deal with...I'm gonna go back next week..

Brian

It's not a programmer's bug that causes the screen to flicker when a voice comes up on the Atari 8 bit computers. It's a hardware conflict problem that's a price you pay for speech synth software. I remember a program called POKER SAM that would blank the screen whenever SAM spoke to avoid the problem, but it was still distracting.

2596. Re: Cartridge Portcard for PX Xformer

Newsgroup: comp.sys.atari.8bit

Message-ID: <4mgag4$ntc@usenetz1.news.prodigy.com>
Source record: 84123

It's funny that you mentioned one of the few cartridges that won't work this way. Most carts are simple mem images that normally just overlay ram all at once. The OSS carts like BasicXL, Action, Mac65, and maybe a few others are 16K roms that overlay 8K of ram space by a bank selection system that OSS used wonderfully to allow access to more ram while the cart is in place. Some newer carts that have old disk games (Archon?) are also special designs I believe that might actually move the rom data into ram before execution. Any confirmation on this from anyone out there?

2597. Atari 800 clasic's any intrested?

From: rely@ix.netcom.com
Message-ID: <4mgas4$7mr@dfw-ixnews8.ix.netcom.com>
Source record: 84126

Unfortunately, the OSS/ICD cartridges are bank switched. It would make it very difficuly to copy the ROM images to disk. The cart port would make all Atari 8-bit cartridges accessible to PCXF users. It would also be less grief for all.

I like the idea of copy protection of PCXf by using the cart port. Interesting idea.

2600. 800XL problems...

>
>I believe you will receive many challenges to your statement.
>
>John
>jvogel@crl.com

A couple of points:

First, when a company goes out of business, SOMEONE owns the assets of that company, be it the company's creditors, the original owner of the company, or whomever. These assets include any copyrights held by the business. So, there is still a valid copyright held by somebody.

The other point, though, is that my original question wasn't whether the copyright held by the nebulous "someone" was valid, it was whether or not it would be enforced. For example, I have doubts as to whether Electronic Arts would bother to prosecute someone for copyright violations on a product that there was no market for, such as 8-bit Atari versions of Archon. Their laywers would have to sue for damages, and it would be pretty hard to prove financial harm in court in such a case.

Back to our regularly scheduled programming...

Yes, you're right. They're eating up more of the Vertical Blank time then
they're alotted on NTSC machines (PAL VB time is longer).

If you can get ahold of a PAL ANTIC chip, the easiest fix is to put it
in your XL in place of your NTSC ANTIC chip. Then, fix your Vertical-Hold
on your monitor or TV to compensate.

There is a full upgrade, including OS replacement, described by Nir Dary,
the guy who figured all this coolness out.

: to avoid the problem, but it was still distracting.

Actually, the speech he was talking about was digitally recorded, not synthetically generated like S.A.M. Also, again the flickering (jumping, actually) was due to timing conflicts because he's running a Made-For-PAL program on an NTSC-based XL.

BTW, for those who don't realize (yet!), you CAN keep the screen on when doing digital sound! There are MANY examples of this, from the old Epyx International Karate, to that old game with the bugs and the magnifying glass ("We gotchya!"), to the EXCELLENT fast-action game "MegaBlast" which boasts multichannel digital sound WHILE all of the action is going on!

2608. Re: Old software, dead companies

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-05 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <phANAFh.lmcclure@delphi.com>
Source record: 84135

In a message dated 5-2-96, Mark Smith said:

| "I believe the law reads as follows. If a software
| vendor has gone out of business, the copyright covering
| the program is no longer valid. This is due to the fact
| that the copyright is given to the corporation, not the
| individual who wrote it. If in fact then, the business
| legally disappears, so does the copyright."
|
|
That would be true if it were not for the fact that copyrights are considered intangible property, and can be sold. It is very rare than any assets of a bankrupt corporation "disappear". At worst, they typically are sold at auction to another corporation or individual. Even if an asset has virtually no value (especially intangible assets, which require no storage space) it is usually sold, as it will be included by the liquidator as a part of a larger lot.
-
In some cases, the new owner may not be actively aware of the ownership of some copyrights on old software, or might simply not care. Yet if they percieve no market for the software, they are not likely to go to the trouble of declaring it as freely distributable either, at least until someone asks. Also, if a company is not actively aware they own the copyright on a specific old program, they are not likely to go to the trouble or researching to see if they do unless they have sufficient financial motivation to do so.
-
While I think this situation is far from ideal (and why I would support any move to give software copyrights shorter, but renewable copyright term lengths), that is the law as it currently stands.

One time a few months back (I think it was in that list some cool dude was compiling that contained all of the Atari software out there ever made), there was mention of a Star Raiders II. Well, SR just happens to be my FAVORITE VIDEO GAME EVER MADE and if there's a Star Raiders II, I'd love to buy it!

If anyone knows if this beast really exists, what its major differences are, and how I can get my hot little hands on it, I'd be VERY VERY grateful!

Actually, I think some companies might want to keep and actually enforce
their copyrights at least so they can retain the option of still selling the
games. No, not to the Atari 8-bit users directly, but rather to the
Nostalgia/Emulator market. Activision has a couple sets of 2600 games for
PCs, and one based on home computer versions as well. Namco and Williams
have been selling their arcade games to be used on home consoles. Microsoft
has a couple sets of classic games out for Windows. If the software was
available free, to be used on emulators they could potentially argue
that it hampers their sales like any other form of piracy. I kinda have
doubts that any cases will really be brought either, but I think most of the
game companies and especially those still in business would have legal
grounds to prove potential loss of earnings-- even if EA hasn't even thought
about selling Archon to the nostalgia market yet.

> Unfortunately, I can't have the 130XE at work.

Yeah, I would love to see that too. I've always wanted to play my game carts on the emulator, but it's a pain in the neck to make disk copies to use on Xformer. It can be just a simple ISA card with the port and Xformer(with a patch I assume) can make traps to this so the Atari OS thinks this is the port. Maybe you can toggle between Left and Right ports for those few 800 carts, or maybe an image of the Translator.

I seriously wish that Darek would consider this, of course I'm still waiting for joystick and MIDI support for Gemulator 95...

2615. Help with ATR8000? (long)

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-05 00:00:00 UTC
From: alexc@3rdplanet.com
Message-ID: <alexc-0505960307330001@news.3rdplanet.com>
Source record: 84142

So I was making my usual monthly round of the thrift stores and junk shops and I picked up an ATR 8000. No docs or cables of course. I took it home and managed with some trial and error to put together a floppy drive cable and hook up two old 360K drives. (If anyone cares, the drive cable is wired straight-through, with no PC-style twist, and the drive select jumpers on the floppies should be set to whatever drive number you want them to be, _not_ all DS1 like on a PC.) I also found a printer cable with the right ends--I think it came from a Kaypro II. (Again, if anyone cares--another straight-through cable, 34-pin edge connecter on one end and male Centronics D-34 on the other.)

Much to my surprise, it all worked when I powered it up. (Although I couldn't test the modem port, since I didn't have the right kind of cable handy.) The printer interface even adds on a CR automatically so you don't need to fiddle with DIP switches if you share a printer between the Atari and another machine, like I do. And the floppy drives are able to read the XF551 DS/DD format. That was a big surprise to me--I thought none of the 8-bit double-sided floppy formats were compatible.

So, what else can I do with this thing? I know it can run 360K 5.25" drives, and also 8" drives, IIRC. I'm not likely to find any working 8" drive mechs, but that means it can also run 1.2Mb 5.25" drives, right? What I really want to know is, what if I plug a 3.5" drive in? Will I get 720K on a 3.5" disk if I tell MyDOS the truth about the drive configuration--i.e. double sided, double density, 80 tracks per side? (Is 1.44Mb a possibility?)

And what's the deal with that edge connector for the serial port? Pinouts, anybody?

A couple other questions:

How do I tell if my ATR unit is one of the ones that can run CP/M, and how does it work? Not like I want to run CP/M on the Atari (ha ha), but it'd be nice to know. All the sockets on the board are filled, I notice--eight of them with 64-kilobit RAMs and one with a Z80 CPU, so I'm guessing I _do_ have the CP/M option. Can the RAM also be used as something useful, like a printer buffer?

Also, there are a dozen or so jumpers on the board, with no clue as to their functions--do I need to be concerned about them? And the reset button on the back isn't connected to anything, just a pair of loose wires--shouldn't it go to one of the jumpers, or to the Z80, or something?

Any help appreciated, as usual...

Whilst reading the usual rubbish I find here, James King wrote something
interesting to All about B&C Computervisions:

Hello James,

JK> I visited B&C this week as well and they were not only VERy courteous,
JK> but have ALWAYS been very courteous. Your bad mouthing B&C after only

All fine and dandy, so far.

JK> having done business with them ONCE (if at all) is very unfair.

But that's just the point. If, on first dealing, you get abuse, you're not
going to go back, are you? Mind you, if the person complaining about the abuse
they received, were abusive themselves, serves them right.

I have found that going in guns blazing, is rarely successful. Far better to
be curteous. If you fail take legal action against whoever. Often, the mere
appearance of a summons to appear in court does the trick, should things ever
get that far.

Source record: 84144

(Fellow has problem with 'ribbon' connector from keyboard to mother board.)
This is a very common problem. We've discussed it some and here's off the top as I type.
It sounds like you may have a problem with only one of the 'traces', I mean the ground or power supply 'trace'. If this is the case, then you may be able to push a thin 'wire' or piece of metal in that place in the mylar and fix it. Look very carefully for where the break is.
Some here have said the problem is frequently in the end of the 'ribbon' that plugs into the socket on the mother board. They suggest a clean cut, about 1/8" up from the end and cut off the covering plastic to make a 'new' end to the ribbon.
This is hard, and is easy to cut the trace when you go to cut off the covering plastic.
I solved a similar problem on my 130xe by finding a particular item at a local electronics surplus that is a perfect 'fit' of a small 'ribbon' that has metal flat 'pins' on both ends of this short ribbon. I was able to cut off the end of the keyboard ribbon and stuff the flat metal pins up under the covering plastic. The other end fit perfectly into the mother board socket.
Barring all above, you could maybe find a new keyboard mylar at B&C. I don't think Amer. Tech. has them, could be wrong.
Again, I think the 'key' is to find the break or bad spot on your ribbon and fix it from there.

One of the things you will find most frustrating about the fine engineering of the XE's are those pesky keyboard "cables"... really, it's just conductive ink masked onto a plastic backing.
It's plugged into the keyboard jack.. and for 1 or 2 cycles, it's fine.

More than that... it's screwed... Try holding the connector up to the light... see if you

can see through the connective zone that's supposed to plug into your keyboard "jack".... if you can see through it.. that's your problem..

Fixes? Look throught any of the electronics magazines for the Silver-based conductive repair
pens... I've used them in the past to repair things like this... they work ok... again, for a connector, the life is only a few cycles... so be careful...

Let me know your results...

From: bob@jriver.com
Message-ID: <4ml496$en8@newsbox.jriver.com>
Source record: 84060

I have an Atari 400 that I dragged out of the attic last night. I've modified it into a 800 equivalent (48k ram, video/audio jacks, 1200 keyboard, etc). I would like to know if it is possible to add a hard drive to it.

I have seen hard drives connected to an 800 before, in 1983 I used a corvus HD that was attached to the 4 parallel joystick ports!

Is there something similar, perhaps a simple circuit that can convert the joystick ports to SCSI levels and OS patches?

The reason I would like to do this is that I have a lot of software on deteriorating 13 year old disks that I'd like to move to a hard drive.

Thanks for any suggestions.

Bob

Star Raiders II exists, and I've got an original disk version (Not for sale, BTW)

It's basically a finished version of the bootleg(?) Last Starfighter, with the Starfighter intro removed and an Atari Logo stuck in it's place, oh, and you can fly backwards, which I seem to remember you couldn't do in Last Starfighter.

"I can't see the solution - Through this state of confusion....."

If possible, how much are you selling the XLs for?
What software do you have?

Who's bitchin? How long have you been reading this group?
Do you know how many times I've read that post about how a bare
Atari 400 must be worth $100 because the fool has held on to it
for so long? Who's to say he didn't purchase it for $49.95 in
1982, lost it in his attic for 13 years and is trying to make a
profit? His prices are ridiculous, his post is on automatic
re-post every 6 weeks, and I'm not sure how in touch with reality
he is! So please stop treating every reader of this group to your
educated language. I have plenty of respect for my old Atari friends
and had quite a bit of fun teasing the Commie-64'ers in my time,
but I've known 10 year olds more mature than you have been lately.

2630. Atari Documentation Archive

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-06 00:00:00 UTC
From: dann@nymt.reuter.com
Message-ID: <4mlrm9$8mj@client1.news.psi.net>
Source record: 84069

I have recently begun scanning in all my old 8-bit instruction manuals. What does everyone think about an archive of documentation for old Atari games? We could keep .JPG images of the graphical portions of the manual and the text could be either scanned, regular text, or even converted to html. I bet a lot of people have software that they no longer have documentation for and would enjoy having such a resource.

I'm not sure if there is a program to extract files out of an XFD image, but there is one that
extracts files out of ATR images. Its is called ATRIMG11.EXE (Atari Disk Image Processor) and
your should be able to get it from http://www.umich.edu/~archive/atari/8bit/Diskutils/

You would have to convert XFD images to ATR images and I'm not sure which program does that, but
you should be able to find one somewhere in the umich archives.

I don't want to be attacking you, but you could always buy new disks (Global, for example, still sells 5-1/4 DS/DD disks for cheap) and then just copy them. If not, then you could snag an emulator, and some of these (at least reportedly) will let you convert Atari disks into ROM images by just loading them through a 5-1/4 floppy on your PC!

First of all, be careful what you do before you infringe on copyrights :-o However, Atari emulators exist (PC XFormer, for example) that will let you load the old Atari XL disks into a 5-1/4 floppy on your PC and then convert them into the corresponding ROM format. Try UMich's Atari archive for an emulator --- I don't have the link on hand --- someone mind posting it?

I've got a Comrex CR-220AT dot matrix printer that will directly connect to an Atari 8-bit SIO connector. No interface is needed. The printer does a draft font and non-Epson compatible dot graphics. It'd be fine for printing casual correspondence or program listings. If you've moved your Atari 8-bit system to the kid's room, this printer would make a fine addition there.

If you have a disk drive for your Atari I'll throw in a disk with TextPro configured for the printer, and Koala Print modified for it to print MicroIllustrator graphics.

If you or someone you know could give this like new looking, like new working printer a home, e-mail me at sgwallace@delphi.com with your plans for it. I'll send a more detailed description and answer any questions.

: hello. how would a person shut off the keyclick on an xe so that it wont
: come thru the tv speaker, yet other sounds will come out as normal? is
: ther anyway to do this? please reply..

Set memory location 731 to a non-zero value. In BASIC, this would be a:

POKE 731,1

You can also make tiny ML program to do this. Try (from Atari DOS) [C]opy
"E:,NOCLICK.COM" (or NOCLICK.AR0 or AUTORUN.SYS or whatever):

Then type:

[ESC] [Control]-[Insert]
[ESC] [Control]-[Insert]
[Inverse] [Shift]-[,] [Inverse]
[Control]-[B]
[Inverse] [Shift]-[,] [Inverse]
[Control]-[B]
[Control]-[A]
[Return]
[Control]-[3]

That SHOULD do it. (The first two keystokes are the two "255" characters
at the beginning of the binary file. The next two (and next two after that)
keystrokes represent the low-byte and high-byte of "731" - the address to
start (and end) the binary load. The last byte is a "1", as in "POKE 731,1").

Finally, [Return] gets it all in through the E:ditor device, and [Control]-[3]
sends an "End-Of-File", so DOS stops copying from E: and saves it into the
file.

Good luck! I hope I got it all right!

You can also change the key repeat rate with byte "730". :) 6 is normal,
2 is a nice fast speed, 1 is insane.

Maybe I should jump in again and stir the pot to see how much meat
is in there.

I wish I could get ahold of some of those copyright holders and have
a LONG talk with them about THEIR responsibilities. I remember
paying 300.00 for visicalc (it wasnt too awful bad, but a lot
of the pd stuff today is much more powerful. I also paid 99.00 dollars
for syncalc because it was taunted in antic and analog as the
definitive software package . I remember that in about 6 months my
disk went to heck and even though I had dropped a huge (at that time)
chunck of change, there was no replies to my letters about the
procedure to get a new copy.
the point being, how would you, the reader react if your new
business software package pooped out and the seller pretended you
didnt exist????
I beleive that sometimes, some folks are pushed into alternative
outlets for getting certain peices of software. Until software
distributors take responsibility for what they advertise their
stuff to do and stand behind the media, and LISTEN to the problems
the user is having and respond to it , or at least having the common
decency to release the software into p/d when they can no longer
support it (or,,,cut the price to bare bones and still support it
when newer versions come out....ie. coreldraw)
that there WILL be under the counter deals made.

As to the folks who collect software just for the hell of it(the
warez guys), it is an obsession and nothing you or I say gonna
stop that from going on.

2640. XFD Question: Nested XFD ???

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-06 00:00:00 UTC
From: RCAD40A@prodigy.com
Message-ID: <4mjoaa$12e0@usenetz1.news.prodigy.com>
Source record: 84147

I Bought the GEMULATOR CD-ROM from Branch Always Software, mainly to get the 3.5 version of XFormer and to poke around through all the included Atari 8-bit software. I was browsing through the ANTIC subdirectory and I came across a couple of interesting .XFD images. They appeared to contain a DOS 2.5 image that had a file inside that was another .XFD image. Actually, the original image and the stored file had the same .XFD image name.

The primary XFD image was the correct file size and could be read by using it as D2: (it had no DOS on it). But, the stored .XFD image in it was smaller than 92K (a partial disk ?)

Anyways, I was thinking about how to extract (expel) a file out of an XFD image? I know that you can use XFormer to load individual files as D2: etc, and then to copy the file into D1: etc. But, how do you extract a file out of an .XFD image? I do not have SIO2PC or the XFomer cable. I just use a null modem cable to connect my real Atari to my PC.

Any comments or ideas? Thanks!
From Doug Feldman, in Ann Arbor, MI

>Hi there,
>
>would anybody tell me how to copy a file from a pc to an atari-portfolio
>and from an atari to a pc via the serial interface of the portfolio. Use
>which software?
>I would really appreciate any reply

You can do it with the parallel port. (Cable and software for the PC
come with it.) However, via the serial port, you would need a comm
program for both machines, a cable, and a null modem. The null modem
simply flops a couple of the lines so that the match up is correct.

If you have a comm program for both machines, you can transfer the
files using Z modem, X modem, or whatever like protocol both machines
support.

You might even be able to "copy the file to and from the com port.
(Haven't tried that in years, and never with the Atari and PC).

Unfortunately there doesn't seem to be a Portfolio specific newsgroup
on the internet. Compuserve has a Portfolio specific area, but alas I
no longer have an account there.

Hope this is of some small help.

Dude, I can buy Atari 400's all day in pawn shops for $5 apiece! That
"original cost $599" isn't going to sway anyone to pay $100!!!

Jeez!

I'm sure the other stuff is equally over-priced!

(snip snip snip)

Actually, the posts and online docs regarding software copyrights clearly
state that if a company goes out of business, then the copyright reverts
to the program's author. It does not disappear.

Yes, Star Raiders II actually does exist. Just a week ago, I bought the
last cartridge version of the game. It is exactly the same as the "Last
Starfighter" and doesnt resemble the original Star Raiders at all.

A utility called myutil is available from barnone.citi.umich.edu, I've tried it with no success, might work better for you. It only works with DD MyDOS disks, though. You'll need to create DCM files with Disk Communicator to produce those, then copy them to the PC with myutil.

There are also two other solutions: send the DCM via a modem or null modem cable, or buy/build an sio2pc cable. The latter is the better of the two, as you can use your PC as a disk drive.

I also visited some of the Apple newsgroups (Someone had given me a
complete IIgs system, and to find a place to get system disks).
Anyway, I visited their ASIMOV ftp site only to find several cracking
programs, Beagle Brother Disk Images and Penguin Software Images
as well as many other commercial packages stored as disk image
files.....

I wasnt aware that Penguin Software was released to public domain....

The question is.... is it?

I worked for penguin software back in my high school years (
1982-1984) assembling software disk and packaging...

There is one person I can ask that can give me an answer, but to my
knowledge, Penguin was never released...

I will get back to you... (BTW, The program was Graphics Magician...)

: You can do it with the parallel port. (Cable and software for the PC
: come with it.) However, via the serial port, you would need a comm
: program for both machines, a cable, and a null modem. The null modem
: simply flops a couple of the lines so that the match up is correct.

: If you have a comm program for both machines, you can transfer the
: files using Z modem, X modem, or whatever like protocol both machines
: support.

: You might even be able to "copy the file to and from the com port.
: (Haven't tried that in years, and never with the Atari and PC).

: Unfortunately there doesn't seem to be a Portfolio specific newsgroup
: on the internet. Compuserve has a Portfolio specific area, but alas I
: no longer have an account there.

: Hope this is of some small help.

Thanx for Your help, Alex. I allready managed it to copy files from
the portfolio
to a pc via the serial interface (on the portfolio copy filename aux and on
pc side using the old windows terminal funktion "receive text-file" -- it
works. But I cannot transfer any file to the portfolio, neither a comm
programm like laplink or intersvr because there is no windows on the port
folio. Any idea to copy a filestring from one of the com ports with commands
like copy, type ?
Thanx in advance

It's a great idea - go to it! =)
Keep in mind that GIFs can be more compact than JPGs for certain
kinds of images (the sorts of illustrations that typically
accompany documentation are a good example).
Also, you may have to deal with the whole copyrights thing
we wrestled with a couple of months ago (though my guess is that
fewer people will feel the need to protect copyrights for
docs as those who do for software).

Oscar

If my memory serves, SRII for the 8-bits was never released. It was in
proto, killed by Atari, sold to another company, and re-released called
something like Buck Rogers (I may have the title confused) with nothing
changed but the name. Back in my K00L WAREZ DAZE, I had the game twice, as
both SRII and Buck Rogers.

For your expanded Atari 400, I would like to suggest finding an old XT or AT clone with a com port and hard disk and then buy Nick Kennedy's SIO2PC cable and software. It allows you to use a PC's hard disk to store disk images and for the PC to act like Atari floppy drives. It goes on the end of the chain of things hooked into your 13 pin connector on the side of your computer. B&C Computervision might have some cables and software available at 408-986-9960. After you get it working, you might try the APE (Atari Peripheral Emulator) software that expands on the concept and allows the PC to emulate all kinds of things. It might not be as fast as some of the hard disk interfaces like Black Box, but it's faster than an Atari 810.

Seeing as no one answered you, I will try.:
The 400/800/1200XL are not very well suited to add a Hard
Disk. You mentioned above the only way, IF, you can find one. I've
only heard of them, never seen one.
The 600XL, 800XL and 130XE have a 'PBI' expantion port
and there are about 3 devices available to go on it with a SCSI interface
included. The BlackBox, the MIO and the SUPRA Hard Disk Interface.
All of these will cost, used, from $50 and upward.
From here I should direct you to the Atari 8Bit FAQ but I don't
have the URL address handy. Someone, fill it in please.
BTW, there is suppose to be a new MIO II comming out that
will allow you to use a IDE drive but I haven't heard of it being released
yet.

Hope this helps; Rich Mier

I don't think you can do 1.44 without a new driver written for
it. But you can do 720 and if you tell SpartaDos 77 track double sided 8
inch drive, you'll get over a meg on both 5.25 and 3.5 inch diskettes,
possibly 1.2meg according to SWP.

>How do I get one, and is this a 8-bit computer or is it a European model?

The 1450 XLD was just a prototype computer that was never released when Atari prepared to launch the XL series back in 1983. It had (or was meant to have) a built-in DD/DS disk drive, an internal 300 baud modem, and voice synthesis (I think). I forgot what the memory was. A noble, but clumsy attempt to get their mitts on the C-64's market....

2676. Atari 8 bit archive

Newsgroup: comp.sys.atari.8bit

Updating search for software for atari 8 bit archive.
Now have about 500 titles, and if can get these DD disk images to
work, will be adding about 50 more. Anyone I'm not already
corresponding with who wants a list, email scharles@superlink.net
Anyone interested in getting s/w email also. Until FTP is active, have
to use email.
Anyone with s/w to share please u/l lists to scharles@superlink.net
Thanks!

2677. 800xl video/memory problem

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-08 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <318d7c1c.12844410@news.superlink.net>
Source record: 84009

Ok, here's a weird problem to solve:
I have an 800 xl with super xl 2.1 installed (give chroma output to my montior and cleans up signal a bit). After the chips heat up, the screen changes to a green background, but it also vaires to all the colors of the spectrum. Sometimes the machine does a "mini reset" which has the unfortunate effect of freezing the machine up, as if you had turned it on and off VERY quickly, scrambling anything in memory.
I've thusly replaced: the memory, the memory control chips, GTIA, POKEY, PIO, OS chip, chip between GTIA and vid output (transistor network). NONE of them has solved the problem.
What could it be!!! The only chip I would like to replace that I cant because I don't have an extra is the basic rom chip. Of all the chips, it gets THE HOTTEST. Can I just remove it and use a basic cart?
HHHHHHHHHEEEEEEEELLLLLLLLLPPPPPPPPPPP!
I can't use my Omnimon if my xl doesn't work and I'm having cracker withdraw!!!!!!!!!!!!!

Does anyone have the games Dunzhin, Kaiv, Wylde or Ziggurat for the 8-bit? I'd really like to get my hands on these. And yes I own all of them legally, but one disk is missing and the other 3 are bad.

Still don't understand why it's okay for C64 and Apple software to be up everywhere on the net, but not Atari 8-bit. Doesn't look like any of the software companies are lining up to have a crack at those sites.

The 1450XLD is a really cool computer that old Atari almost released. It never actually made it to market. I think everyone that reads this group would like to have one, but prototype models are few and far between.

Are you speaking of the MPP MicroNet? If so, it doesn't require any software. It is simply an 8-input, 1-output electronic switchbox. You connect up to eight computers to the inputs on the sides and chain any devices you want to share to the rear connector. Then, when one computer accesses a device, the others are locked out until it's done. The LEDs on the front panel show who owns the lock.

> 2) I don't have the power supply so I need to make one or find one(any body have
> the specs for it?

It's got an internal regulator, so you can feed it anything (within reason) over 5v DC. I just used one of the multi-voltage multi-connector adapters that you can buy at the grocery store. I set it for 6v, and the adapter's 500mA was plenty to drive the device.

800XL. On the main board, left front corner. See the small
'Pot'. This is your problem. This controls the screen color. Maybe just
use some TV Tuner Cleaner on it, move it back and forth a few times
and reset the correct screen color.

>Glenn

>email: glennb@interport.net

Well, according to the 2600/5200/7800 FAQs, the 7800 is basically a
2600 with upgraded graphics, more RAM, etc. The 5200 is more or less
an Atari 400 with some of the I/O locations moved around, a different
OS, and different controller handling. Interestingly, the 5200 had the
same 16K of RAM the 400 did, while the 7800 only had 4K, though most
of it was VRAM, making it quite a bit faster than the 5200's RAM.

Star Raiders II came out in 1986, I believe, originally on disk. I thought it was all right; some neat effects and what-not (e.g., battling motherships, when the Zylon fighters blew up). But it lacked some of the flair of the original.

From what I recall, "The Last Starfighter" idea was canned, after Atari figured a Star Raiders sequel would be more lucrative, partly due to the namesake. So the earlier game became another legendary unreleased software that got released via bootleg.

The Atari 1450XLD looked like a 1200XL or 1400XL, except that it had
a built in 5 1/4" floppy drive. I think the drive was double-sided.
It used DMA for faster disk I/O, (Atari reported like 5x faster than normal)
It also had built in synthesis.

Supposedly, this and the 1400XL were never released. They were featured
in an Atari catalog though, and a number of people claim to own one.
I think I remember seeing one myself somewhere, although my memory
could be faulty.

Source record: 84029

Hi Tom, Further to our conversations regarding using Telnet to access the WWW..

I went on to lynx.cc.ukans.edu today to try out your 'ansi' selection (when choosing 'lynx' or 'www') and also to see how much further I could get.. - It didn't go tooo badly, I was using ICET to begin with but the different screens were overwriting each other without deleting the first one thereby making it really hard to read after about 4 screens, I then switched to Flicker and things seemed to be quite a bit better. (although not 100% it was readable. :-))

Had a nose around, but for the life of me I couldn't find a way to access the WWW to do anything.. (can you help by telling me how to access it please <sick grin>) - I must be doing something wrong, but no matter which command I choose I always seemed to end up with a text file explaining about the different things..

O'yea, I've just found out there is a little problem with the Internet E-mail getting through to me that's why I never recieved your messages.. - They seem to be going to the wrong address for some reason... (it could be at the gateway thingy that it's happening) - No matter, hopefully it will be sorted out soon... :-)

A lot of the disks are protected and I don't have the means (or the
time) to figure out how to copy them. I am going to try the SIO2PC/APE
route. Am already building the interface.

Don't forget the 300 baud built-in modem and speech synthesizer.
According to the pamphalet I have here ("Four New Atari XL Home Computers",(c)
1983) the disc drive was a built in "double-sided dual density disk drive".
would have been nice.

Source record: 84033

Hi, I've had an atari xmm801 dot matrix printer for about as long as they've
been around. The print quality is pretty crappy now and I was wondering what
would be the best way to go about bringing the print quality back. I have a
source for new ribbon cartridges so that isn't the problem(though they probably aren't as
good as what atari used to provide). The manual mentions nothing about cleaning the printer
except to say "get a new ribbon".
help.
randy.

Hi,

I have text doc called "Atari System Reference Manual" but I want
information that that text doesn't have.

I made some asm programs which does DLI interrupts, and I want to
know OPTION key is pressed or not.
That text said CONSOL($D01F) is for [START], [SELECT], [OPTION]
and speaker in Appendix. But there are no information what bit
is for [OPTION]. In "sound" section, it said bit3 is for sound.

Can someone let me know about CONSOL($D01F)?

And, one more simple question. When I use display list and
graphics mode (not ANTIC text mode) and I need 192 liens, must I
put 192 display instructions?

Please reply by both E-mail and posting.
Thanx!

Source record: 84035

J. F. Goodwin (smrgoodw@reading.ac.uk) wrote:
: Anyone out there heard anything about when the new issue's coming out?
--

I stopped subscribing to this magazin in January. I have been meaning to
write the publisher a letter as to why. The reason is simple. I think his
price for the magazine for people who live in North America is a rip off
plain and simple. In the front of his magazine, it says..

"Overseas Rates reflect only the difference in postal costs"

Utter B.S.!

Magazine Only

UK 15 pounds
europe (Air) 17 pounds
Elsewhere (surface) 17 pounds
Elsewhere (Air) 23 pounds

Disk Subscription

UK 25 pounds
Europe 32 pounds
Elsewhere (Sea) 32 pounds
Elsewhere (air) 42 pounds.

Any fool can see that the difference between a disk subscription and a
Magazine only subscription is 10 pounds. If the added cost of (Elsewhere)
surface is 2 pounds and that reflects added postage costs, an (Elsewhere)
Disk subscription by Sea should be 2 pounds over the UK Disk subscription
cost....which is 27 POUNDS!!!! By air is even worse Magazine only by Air
is 23 pounds....a disk subscription should cost 10 pounds more...but no,
it costs 19 POUNDS more.....what is the extra 9 pounds for?

So New Atari User, it seems that your added overseas costs DO NOT reflect the
difference in postal costs.

There is no incentive for me to subscribe living in Canada. It is your loss.

The three low order bits are Option, Select, Start in that order.
In Turbo Basic, PEEK ($D01F) is 7 with none of those three keys pressed, 0
with all three pressed, or 3 if you press Option. (In Atari Basic, it's
PEEK(53279)).

Hey, speaking of 800 and 800XL power supplies...

I've been gathering "stuff" from my house to put into a community garage sale coming up this Saturday, the 11th. I just put prices on my stuff last night, and in so doing noticed that the Atari 800 I'm selling (don't even remember what price I put on it) lacks a power supply. Ironically, I also remember discovering an unrecognized Atari power supply in the vicinity of where this computer was stored for a couple of weeks, and taking that power supply away and dumping it in the box/closet with all the REST of my Atari stuff that I'm NOT selling. With me so far?

Basically, if someone here could tell me how to unambiguously identify an 800 power supply, i.e. what differentiates it from all the OTHER possible Atari-related power supplies, sometime before 5PM Friday the 10th, I'd really appreciate it, because I'd be able to go back and fish out the proper power supply to sell with the 800.

In case you're running out of time by the time you read this, you can leave me voicemail at 1-800-388-0609, mailbox 224-2029. Hoping to hear from you...

How fast is SIO2PC? Has anyone used a ZIP drive on their PC in
conjunction with
SIO2PC? How fast does SIO2PC work with a ZIP drive as opposed to a
regular hard
drive? I'm considering the SIO2PC route to backup and archive all my
old Atari stuff, and it would be neat if it were fast, too.

> have my memory)

I think someone mentioned a Yars clone on the 8-bit, but I don't knw
what it is. Pitty, since I love to get it. In fact, I trying to
write a "sequel" to this game on the ST called 'Final Retribution'.
And I think someone else is writting another clone for the ST but
it's unconfirmed. Could '96 be the Year Of Yar's Copies? :)

I strongly suggest that you try to find a cheap 2600 and a copy of
Yars along with the instruction manual and comic book. Even surf the
Web for more information about it. Hope it works out for you...

>I am an Atari Newbie. As I was looking through the >manuals to a 1050 disk drive I have it mentions an Atari >1450XLD which is a system with a built in drive.

>WOW!!

I used to have one of the original 1450XLD engineering prototypes. I sold it to a collector friend of mine because I was finish having my fun with it. I didn't want it for collecting purposes. I wanted it for use.

Let me give you a quick low down on it:

- Has a built in voice synthisizer. It used the Votrax SC-02 (second generation) chip. Along with the SC-02 were a pair of vocabulary chips. These vocab chips were in 40 pin ceramic packages with the cover scotched taped on. Unfortunately on mine the voice didn't work. Don't know why.

- Built in 300 baud modem. If I remember right it used a Intel chip for the modem. That part work. But again, only 300 baud.

- Built in 40 track DS/DD parallel (not serial) disk drives. These drives were hooked up through the parallel bus and had their own D: drivers. The drives in mine had a piece of sheet metal going across to provide support. This machine was definately a prototype (#5 was on ther right they used a Western Digital 2732 floppy drive controller. Since the drives used a D: handler that came from the parallel bus, the Spartados handler didn't support them. Spartados would only load so far until it loaded it's own D: device handler. I could only use DOS 2.0, 2.5, 3.0, & 4.0 and MyDos with it.

The machine had a 1200XL style keyboard and was in a similar case to the 1200XL except for the added height for the drives.

There were two different types of 1450XLD boards. The one I had was the TONG CPU board. I'm not exactly sure what the other was refered to. The TONG CPU board had a area for a 48 pin chip. It was rumored that this spot was for a Apple II compatiability chip. Also had a prototyping area for the engineers to add extra logic chips.

My machine essentially worked. But before I sold it, it started developing problems with the GTIA chip. The screen would go blue every so often. It was also missing the 1450XLD nameplate.

I managed to get this computer at a Federated liquidation sale for $75 (a incredible find!). The other 4 prototypes were bought before I could get back to get them.

About the only thing I have left of the machine are images of tave a 1400XL also and really enjoy using it. It's neat to turn on the machine (while hold down option and select) and hear the machine speak. It says: "Atari 1400XL self test, press select, start, or reset."

That's about it. Hope this answers your questions about it.

Hello ...
I have a program (imageman) that extracts files from the ATR or DCM
file, but for a disk that not give directory, how can i get an atari
file?,

Seems that there isn't a program to convert these formats to DCM or
atari disks, anybody knows the file specs for .ATR, or .DCM?, so can i
write a program toi convert it to atari disks.

ok. thanks in advance for your reply.
M.

Thank you for noticing this! I always wondered about it; every reference
said 128 colors, but if you actually tried a demo, it was clear that that
wasn't what you got. Do you happen to know why this happens, by any chance?

Just 'cuz I'd finally like the chance to rant about it ;-) let me say that I positively *hate* these people. I found them rude and continually over-priced, but supported them 'cuz they were a local company, a rarity. The thing that clinched it for me was when I was hanging out in their store once and the woman (the notorious 'C') actually _kicked me out_!! Said they didn't want their store turning into a "hangout", even though I was their only customer. The reason they are going out of business (withering slowly, anyway :-) ha ha revenge) is not because of the dwindling 8-bit market but their own anti-salesmanship. Seems to me anyway. I thought Atari people had a special bond and friendliness! :)

I suggest anyone wanting to learn about display lists and Option key presses get a copy of Mapping the Atari, a wonderful book on things like that. Even Your Atari Computer has information on these topics that is easy to understand. BTW, there would actually be a few more than 192 bytes (instructions) for a 192 line display list after you include the instructions for pointing to screen ram and also any blank lines at the top. Maybe 200 bytes or so total?

APE software allows speeds that are 50% faster than Happy Warp Speed, which if I remember correctly, was about double that of a stock 810 or 1050. It may seem to drag when copying a zillion floppies, but when actually using the disks, the speed seems great to me. BTW, for copy protected disks, APE software will be a nice way to go for backing up disks. It allows emulation of lots of different copy protection techniques like bad sectors and such.

You've been waiting for years to find another whole Percom, when you could
simply hook up a second IBM-compatible 360K drive to the Percom
controller? (with a single density controller, you'll only get 180K or
maybe just 90K.) I don't know if you can use more than one controller on
an 8-bit system, but you can sell it in no time (by the time you read
this, you may have already gotten offers).

2729. Re: Q: Atari 5200-7800-8bit

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-10 00:00:00 UTC
From: mrathwel@uoguelph.ca
Message-ID: <4mvhsa$aug@ccshst05.uoguelph.ca>
Source record: 83914

: Well, according to the 2600/5200/7800 FAQs, the 7800 is basically a
: 2600 with upgraded graphics, more RAM, etc.

Think of it this way ... the 5200 was equivilant (roughly) to the
Colecovision, wheras the 7800 was equivilant to the Nintendo
Entertainment system.

The 5200 is more or less
: an Atari 400 with some of the I/O locations moved around, a different
: OS, and different controller handling. Interestingly, the 5200 had the
: same 16K of RAM the 400 did, while the 7800 only had 4K, though most
: of it was VRAM, making it quite a bit faster than the 5200's RAM.

That means little where game systems are concerned because most
of the memory work is done in the cartridges. Most 5200 games were only
16k or so, wheras 7800 carts were usually much larger (up to 144K).

2730. Reborn Newbie Questions: Atari 8bit FAQ/Help with "Chip"

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-10 00:00:00 UTC
From: keshler@dreamscape.com
Message-ID: <4mvm57$ek3@newsfeed.dreamscape.com>
Source record: 83915

Just read posting referring to a URL for an Atari 8 bit URL.
Also (if not in FAQ) interested in any info on how to port Atari
software to PC. Is this just for storage or is an emulator available?
Could someone post and/or E-Mail me (my server updates quite fast)
the URL address? [keshler@dreamscape.com]

Recently dug my 400 out and it is OOS. Bought a 800 years ago just
in case this happened but it doesn't work with the protection bypass
chip I had for it. Posted for help but only responses were for those
trying to sell equipment. Have many (100's) of old games on disk
which I would be willing to share if I could get them working again.
Thanks.

2731. Re: Atari Executable File Format

Newsgroup: comp.sys.atari.8bit

Message-ID: <4n025u$7pb@kendall.mdcc.edu>
Source record: 83916

John Haberfellner (JOHN@ATITECH.MHS.CompuServe.COM) wrote:

: Does anyone know the file format for an Atari executable? The reference
: manual only has the formats for bootable files. What is the format for
: executble files which can be run from dos?

The file goes like this:

$FFFF Header

+-> $xxyy Starting load address
^-------------if $xxyy = $ffff
^ $zzaa Ending load address
^ .... $zzaa-$xxyy+1 bytes of data to be loaded
^<------------repeat until EOF

$02e0-$02e1 is the init address
$02e2-$02e3 is the run address. these tell the loader where to start
executing. I might have these backwards.

Date: 1996-05-10 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4n086t$gan@madeline.INS.CWRU.Edu>
Source record: 83919

Imagic, the usiversal disk image converter for Win95/NT is now
available in version 1.03.

Imagic can take any number of disk images, such as ATR, XFD and DCM
images, and _quickly_ convert them to any other format, INCLUDING DCM!

Thats correct, imagic can _generate_ DCM images on the fly, try it today!

Version 1.03 corrects problem w/ double density DCM decompression and
incorrect reporting of some valid DCM images as 'broken'.

Imagic is available as very inexpensive shareware at
http://www.nacs.net/~classics.

2739. Re: Cartridge Portcard for PX Xformer

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-10 00:00:00 UTC
From: Josh Spatz <mjkv57c@prodigy.com>
Message-ID: <3193F7B0.4BAA@prodigy.com>
Source record: 83924

I think cartridges are THE BEST medium for distributing software, even today. Here's why:

1) Carts are directly addressed as memory by the processor, so they are the fastest media.
2) Carts are virtually impossible to pirate without EPROM equipment and such.
3) Carts can easily hold several megabytes, enough for a single program.
4) Carts are more durable than any other media type.

I don't understand why computer makers abandoned carts. (Did IBM use cartridges in the PCjr? I just got one, and wonder what those two big edge connector slots under the disk drive are). Also why does everyone mock it? You'd think that it would have done well considering what it was competing with. It had a built in disk drive, 16-bit processor, etc. And was competing mostly with 8-bits. I guess it's sort of like what the 1450XLD would have been, execept with a crummy keyboard.

Anyway, I'm kind of going off on a tangent. My point is that it would be a great idea for some PC cartridge media standard to be developed. One Idea could be to create a single cartridge reading device, and then make adaptors that fit into it that have the actual connector and translating circuitry in it. That way, with one peripheral, many computers and consoles could be emulated.

Josh Spatz

2740. A Plan for Atari's Future

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-10 00:00:00 UTC
From: Josh Spatz <mjkv57c@prodigy.com>
Message-ID: <3194004A.4BE9@prodigy.com>
Source record: 83925

I think that there are a number of things Atari can do in order to become a large, dominant company again. With their technology, and especially their name, they probably have more potential than any other company to capture the home market, which is still mostly untapped by the big computer makers.

My first idea would be for them to contract with a large American TV maker (Magnavox, RCA, Zenith, etc.) to integrate a video game system into a television. If the price of the television were to remain unchanged, this would be beneficial to both Atari and the TV maker. First, everyone buys a TV. So people would think "I'm getting a Video game System ffor nothing" and sales of that TV would increase. Atari would get a small amount of money for this. Most of their money would come from sales of games for it, and licensing for other companies to write games. Also, if the any of the customers ever wanted to buy another video game system, it would have to be an Atari, because they'd already have some compatible games. The TV itself would just have a cartrigde port and some controls on top, and jacks for controllers at the bottom. Better yet, the controllers could use the TV's infrared for the remote so you could have wireless controllers. In fact, they could even go so far as to eventually integrate a complete computer system with a with a VCR into a TV. With a wireless keyboard and everything. (I got this idea before I ever heard of the new thing from Gateway. But Gateway's thing is still a big clunky box that has to be attached. It would be much better to have it all in one big unit.) With a good marketing program, this could become THE video game system.
What do you think?

How about this:

Atari could use the current internaet mania and Net PC craze to their advantage. I don't support the idea of a network-only computer. But A well-designed home computer with a cartridge port and/or a CD drive to run programs off and a small hard drive to store data on (Instead of a small HD, what about one of the emerging high capacity floppy technologies, like the new 3M 120Mb 3.5" floppies? This would provide data storage, a way to transport files, and a good way to store programs for developers who cant make carts or CD's. Like how old home computers used to use floppies for everything, only this is 120Mb, so you don't need an HD. It would also give unlimited storage, just buy more disks). It would have a user-freindly OS in ROM, and of course, A high speed modem with internnet software and an access plan. This would be a main selling point. It should have facilitis to use a standard VGA monitor, or hook up to a TV. All this, combined with Atari's name and a good marketing plan, could dominate the home market.

What do you think about this?

One last idea:
Atari could use some of that huge cash surplus to buy Atari Games back and get back into the coin-op business. (Maybe they could buy Willams out. This would give them lots of classic games like Defender. Didn't Williams just buy Atari Games from Warner?). Get this: A combination coin-op game/vending machine that could give free snacks or drinks as prizes for making a high score. This would be interesting and give people an incentive to play the game, as well as keep them there when they get thirsty.
What do you think?

Well that's a mouthfull. I've come up with all of these ideas in the last two weeks, and think they could be feasable and very lucrative.

Post your ideas and responses to mine here.

Thanks,
Josh Spatz

> 2) Carts are virtually impossible to pirate without EPROM
> equipment and such.

Only if you plan on distributing pirated software actually
in cartridges. Most pirates just copy the carts to a file
and distribute the stuff that way. Very easy to do _without_
EPROM equipment and such. You could copy a cart in the Atari
400 with a program to dump the ROM to a file and the only
equipment needed was the tip of a pencil to insert in the
cartridge door power switch to keep power on while you insert
the cartridge and then press the START key. All that was left
to do was to disassemble the resulting file and remove the
"protection" where the cartridge "overwrites" itself.

Yes, it's two bytes of 255, followed by a number of segments, each
with a start and end (or is it length?) address, and the block of data.

If you're interested in this, I suggest you look at my program for
analyzing binary load files at:

>
>Utter B.S.!

[actual prices deleted]

Magazine only subscriptions are sent at a special 'newspaper/magazine' rate. This is not only cheaper, but also rises at a different scale (i.e. doubling the weight does not double the price). Disk subscriptions must be sent at the normal airmail letter rate, which is both more expensive and directly related to the weight of the package.

I don't have my Royal Mail price leaflet at hand at the moment, but I have checked NAU rates in the past, and they do follow the postage rates closely.

You ARE wrong. Companies don't just disappear, their assets are sold to other companies. Assets include tangibles, such as disk duplicating equipment, and intangibles, such as copyrights. Unless the company has PUBLICLY announced "We are giving up the copyright to [software item XXX] and putting it into the public domain", the copyright is still valid through the actual expiration date (which, as has been noted, is 50 years after the death of the author).

>

Let me clarify this once again. The 7800 is NOT an upgraded 2600. It is
a second gerneration 8-bit design. It came with 32K of RAM, had improved
graphics capabilities (more colors, horizontal & vertical DLIs, etc.), tons
and tons of on-screen multi-color sprites, and much, much more. In addition,
the 7800 had an expansion slot on the left side which was supposed to accept
a computer keyboard and standard SIO peripherals. Old Atari originally
intended this system to compete with the other game-console-turned-computer,
the Coleco Adam.

Ran an add for Atari 8-Bit hardware from a School District at low prices..Well maybe I forgot to mention this stuff has 30 day gurantee on it..? Maybe even longer if you twist my arm and pay postage both ways??

No one wants an Atari 400..?? Name a price with Shipping included from what I can determing shipping on this is about $6.00
I do have 1 or 2 with 48k upgrade..

800..old tank of the world..runs and runs..$15.00 shipped

600XL..when I can find them..$15.00 Stock 16k shipped..

800XL..$15.00 shipped

1200XL..$20.00 shipped..weighs more..?

130XE $35.00 shipped..stock...Upgrades available??

Rana Disk Drives..fair shape to plus..?? $10.00 shipped.

Indus Disk Drives...Good shape..$25.00 shipped.

1050 Disk Drives Stock..Good shape..$15.00 shipped

Track Disk Drives when I can locate them..$25.00 Shipped

Percom. Single Density..$10.00 Shipped

Percom..Double Density slave available $20.00 Shipped.

Atari 850 Interface..$25.00 shipped. (No Cables inc)

Atari 810 Disk Drives..$10.00 Shipped..stock..upgraded modles available on request when I can locate them.

1050 Disk drives with generic Doubler, when I can locate them $20.00 shipped..

Parts? I have so many computer ATARI only parts used pulls ect..will negociate a reasonable price..guranteed working for computer or drive..shipping on a single part is $1.50..so go from there..

Upgardes on computers..??I have pulled checked ram for $.50 for 64k and $.75 for 256k ram chips..Can offer complete 800xl or 130XE Upgrade 256k with tested used chips for much less than would cost you go go buy...with docs..

Software? I have over 500 copies of Original software, if you ar
e into the Caset type let me know have a grundle of that sitting
collecting dust..While I may not have what you need now not
saying that I will not come across it tommorow..

Need a Bernoulli box for the 8-bit..have one with several carts
and enclosed in box type with power supply..Power supply costs
me $85.00 so go from there..

Atari 835 modem..antique..with power supply and software
cart..make offer..

Have a couple Accoustical Modems..Make offer..shipped.

2755. Atari Hard Drive Interface! Good Deal!!!

From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <4n0oke$ao4@news.tcd.net>
Source record: 83932

I have just checed stock and have unlucky number (13) last production run KPI-Interface boards left.

Just so you know if you don't! It is the old (Supra Hard Drive Interface).. They put it out as a 20mg hard drive interface, it is capable of...drive 1 is a fake floppy disk double density. drive 2 is set up as a slave..your 810, 1050 ect..set as drive 2 hold down select optiion and it will boot from drive 2..drive 3 is a 16mg partition hard drive, drive 4 16mg hard drive partition, this is where they left off..you configured your drives through 8 by changing the rom..the latter drives 5-8 are 16mg accessable..

I will, set your ROM to accommodate drives 1-8, on a MFM type converted to Scsi drive that reads 256k bytes per sector. You will have to provide me with the drive type when ordering..and I will set the ROM to your drive type...

Price on these close out!!..(Not that they will not be available later at standard price!)..$80.00 plus $8.00 s/h..includes US, Canada, and International shipping...

In order to run this interface..you need either a Scsi hard drive setup, that reads and writes 256k bytes per sector..or a MFM type drive with same stats, interfaced with an Adabtec 4000, 4000a, 5500 or a Omti MFM to Scsi interface.

As far as I know right now I am the only one producing a 130XE to PBI interface..price $15.00 s/h...$4.00..single cartridge module..

Now if you order an interface and can not get it to work on your equipment..will offer the same to you as I have in the past you send me your total setup..pay s/h both ways and I will (test) ect it and send it back to you working..provided none or your parts are in a non-working order...Other words the test and setup is free..I will not replace anything you do not wish replaced..

Back to the interface...There is an upgrade in the works (over 2 years!)..I have suposidly 2 working modles..not completly satisfied with the upgrade yet..It will entaill..plugging in a seperate board..and connecting 5 wires, and jumpering 1 chip. This will make the interface user configurable...

The fake floppy will be gone, the boot drive 2 will be gone unless you menu configure it into the system..the other drives will no longer be ROM controled..But user controled like the

MIO/BB..

Unlike the Supra hard drive interface, this will be completly socketed, you the user can pull and test your own to eliminate problems..(replace bad I/C's)..

There is also a revison, which will cause a complete board re-design to take the interface to Scsi II hard drives..I don't know when this will be available, but I do know there will be at least 3 built!..It has taken me several years, several engineers and programers with many promises to get where I am right now (Lost Faith in Engineers! Lost Faith in Programers!! Many $$ spent on a dieing computer?!!) Sooner or later it will be accomplished even if only 3 exist! I wouldn't even mention it now..but it is not VAPOR WARE..it will happen..

Forgot to mention..the old board even has a printer interface, which no one uses..maybe a couple like me??

Bob.....

Hi Steven,
You seem to be the most innovative Atari programmer around these days.
If only the games that we are all trying to archive and/or store on our
PC's were really worth playing........
That little comment aside, do you have a similar utility for
interconversion of DCM and ATR images that does not require a NT/WIN '95
operating system? What about us DOS / WIN 3.1 old timers?
This reminds me of my recent experience at Egghead. I was looking at
the latest installment of the Activision 2600 video games for PC
computers. I bought the first package about 14 months ago. But now, the
newest one can only be played on a Pentium PC with WIN '95. Is this crazy
or what?

Thanks for your help with connecting old Ataris to the real world of PC's.

2760. 6502 disassembler?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-11 00:00:00 UTC
From: n7ryw@teleport.com
Message-ID: <4n1cis$rhb@nadine.teleport.com>
Source record: 83937

I am looking for a 6502 disassembler. I found one for the Atari called Dis6502, but it doesn't seem to want to work right on my 800XL. The first menu won't work right at all.

I would prefer a cross disassembler that will run on my PC, but an Atari one (that works!) would be good too.

Anyone have any ideas?
Thanks,
Bill

2761. Last Starfughter/Star Raider II

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-11 00:00:00 UTC
From: Jim Treber <jtreber@cris.com>
Message-ID: <3194C671.77F6@cris.com>
Source record: 83938

I talked to an Atari historian whose memory is much better than mine about this game. It seems there was this programmer that spent tons of time developing a game called The Last Starfighter (taken off the movie of the same name, see it if you haven't). He loaned his finished copy out for opinion and review. Needless to say, it ended up on bbs's accross the country in short order. He made no money for his effort. Then Atari stepped in, apparently impressed, and bought the rights to the game, modified it, and renamed it Star Raiders II.

Jim

2762. FS/T: Atari 8-bit computer items [05/11/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-11 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4n1iop$has@dfw-ixnews2.ix.netcom.com>
Source record: 83939

updated 05/11/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$10.00 Astro Chase (Parker Brothers)
$ 6.00 Atari Logo
$ 6.00 Atariwriter
$ 6.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$ 6.00 Computer Chess

$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$10.00 River Raid (Activision)
$10.00 Super Cobra (Parker Brothers)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE, with original power supply, and one (1) Molex connector cable.

$39.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with one (1) Molex connector cable.

This disk drive doesn't include the power supply.

$34.00

*****

LOT #5

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #6

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #7

ATARI 800 COMPUTER *AND* ATARI 1050 DISK DRIVE, for parts only!

These items are not working, but might be used as a source of parts
(example: the 800 keyboard and chips).

$10.00

*****

LOT #8

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me. Please include your
full postal mailing address to save time.

>meetings many moons ago.

Yeah, I bought two copies at a local thrift store today. XE-game system carts. Not too bad of a game, but you generally can only move side to side, not up and down. A real drag. I spent minutes waiting for the baddies to drop down into my sights. The game is very much like the original, and is prettier, but I feel it is much less playable. Oh well, I bought a second copy as an initiator to my game collecting. I really loved Star Raiders, and I wish SR2 lived up to its legacy.

2765. DISPLAY LIST - What are the different codes?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-11 00:00:00 UTC
From: ulf@antic.cls.de
Message-ID: <68gG5caXS7B@antic.cls.de>
Source record: 83942

Hi!

I just noticed that my knowledge about the DISPLAY LIST is no longer as good as it used to be :(. Therefore, I'd like to ask you to send me a list of ALL the different codes you can use to create a new DISPLAY LIST. I need that information to find a bug. Once more, I need an explanation of ALL codes. The more detailed the information, the better are our chances to get a new, superb ATARI 8bit emulator.

Ulf

Ok, I am currently using term80 1.9 to surf the net on my 8bit. If
you get your email address problem fixed up, I could email it to you.
Term80 was especially designed for use at the fastest port speed the
8bit is capable of. Plus, version 1.9 includes modules for use on
isp's which only provide slip/ppp accounts. Some of the included
modules are GETMAIL, SENDMAIL, and WRITEM(ail). This version works
especially well on the two major lynx servers, ukans and panda.

>
> Had a nose around, but for the life of me I couldn't find a way to access the WWW to do anything.. (can you help by >
>telling me how to access it please <sick grin>) - I must be doing something wrong, but no matter which command I choose
>I always seemed to end up with a text file explaining about the different things..

Ukans doesn't seem to support the "g"oto command anymore, since alot
of people used this to abuse irc's. Panda still does. Matter of
fact, you can use "ftp ftp.clark.net", (for example), on panda. On
panda, you can access www pages, converted to lynx format
automatically. You can even access my home page from there, using
term80! Just try "g brutus.bright.net/[ESCAPE control
delete]tomhunt". The escape-control-delete will produce the ascii
equivolent of the tilde character, which is necessary for accessing my
web page.

Everyone should PLEASE remember this one point- One of the major lynx
hosts has shut down the "g"oto command because of abuse of irc's.
Please observe the rules about accessing irc's, as displayed when you
log into panda.

: related to the weight of the package.

: I don't have my Royal Mail price leaflet at hand at the moment, but I have
: checked NAU rates in the past, and they do follow the postage rates closely.

: Simon.Brownlee@jrc.it

Well, this makes sense if they get a special magazine rate. However,
adding a disk is not justification to losing the magazine rate. How many
magazines for computers now inlcude a disk? It would be interesting to
see what their cost is.

The added weight of a disk should not inflate the price that much, and
adding a disk that is part of the magazine should not cause one to have
to pay extra postage.

Either way, NAU loses a subscriber.

>Douglas Neal
>(dugn19@mail.tcd.net)

I had that game, except my version was called "The Last Starfighter". I think it is the same game as Star Raiders II though. Whatever it is called though, it was a really cool game where you fought a ton of ships. If you got through all of the waves you got to fight a mothership that basically went around the screen and pummeled you. Sorry this explanation is so poor but it is hard to explain except that it really reminded me of the last starfighter game in the movie. It was really neat! See ya later!

When you are in orbit (like at game's start) you can't move up
and down. In space battles, you get full freedom of movement.
The docs are somewhat needed. You are attempting to destroy
the enemy fleets and the factories in their home system.

It is much less complicated than the original, but it's
not without some charm.

2771. Imagic Image Converter 1.04 Now Available!

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-12 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4n3itk$nof@madeline.INS.CWRU.Edu>

Imagic, the universal disk image converter for Win95/NT is now
available in version 1.04.

Imagic can take any number of disk images, such as ATR, XFD, SCP, and DCM
images, and _quickly_ convert them to any other format, INCLUDING DCM!

Thats correct, imagic can _generate_ DCM images on the fly, try it today!

Version 1.03 corrects problem w/ double density DCM decompression and
incorrect reporting of some valid DCM images as 'broken'.

Version 1.04 added both create _and_ decompression support for Spartados
SCOPY (*.SCP) Images.

Imagic is available as very inexpensive shareware at
http://www.nacs.net/~classics.

Personally, I wouldn't mind even having a complete 130XE hardware emulator with all necessary ports. It couldn't cost much more than a real 130XE. It could use the host RAM, I/O ports for printer, modem, etc. I would need software to allow building hard drive disk images and allow files to be easily moved to/from the host hard drive and the Atari hd image. It would also need to ne able to access the .ATR, .XFD and possible the .PRO disk images, although the latter would basically be unnecessary since a cart port would be included. It should also have an SIO port for Atari disk drive access.

I'd settle for just the cart port though, just so I could use SpartaDOS and BASIC XE!

How about the following scenario:

Atari is bought from that stupid disk drive manufacturer by
some other game company, say Sega, which keeps the Atari label and
dumps the trashy Atari management. Then Sega would have a "classics"
label with which to market older games and Atari would have the
management, manufacturing and distribution resources it has sorely
needed these past 7 or 8 years. I know, it would go the way of
Activision and Infocom (EA didn't even bother backing up their
computers before giving the hardware to the salvation army:), but
Atari would be alive in spirit, which is more than it is today.

One thing one might do in order to determine whether a copyright still exists on a certain program is to search the U.S. Copyright Office to see what company registered the copyright. There may be a way of searching the Copyright Office on the internet, and if someone knows how, please let me know.

If the search comes up negative, the purported owner of the copyright cannot bring a lawsuit under federal law (Title 17), since registration is a condition that must be complied with prior to such a suit.

Help!
I piced

Let me try this again (my terminal program makes corrections impossible)

Helpo!
I picked up an Atari 400 this weekend.
But the power supply that came in the box won't fit on
the jack on the computer. Could someone please tell me the
output for the power supply for this computer (I want to check
to see if it works).

I have never had an Atari 8-bit computer before. But I have heard great things
about it (I hremember having a friend who had one growing up).
So I figureed for $5 I could not go wrong.

thx in advance. (Please email me any answers because you can see that my
newsreader causes me lots of problems. It is also very buggy).

thx
mike dougherty

>Thanks,
>Josh Spatz
Josh, one thing about Atari as a computer company, they sold off ALL of
their computer related interests rescently. They are strictky a game
company now. I forget who that company is that bought the computer
rights, but they are a peripheral manufacturer. Hard drives I believe.
Atari will never again be Atari computer, unless something magic
happens.

>

If you make them .GIF files they would be more accessible to all Atarians. JPEG isn't an easy format to do on the 8-bit. Not saying it can't or hasn't been done, but the normal distribution format is generally GIF. As for the text in HTML, that's fine for web browsers, but ise ATASCII, compressed with ARC if you wish.

```
------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

The best way to get new information is to join our NAS96 mailing-list.

>to see if it works).
>
The Atari 400 uses a 9 volt AC power supply. The same supply was also
used for the 800 and all Atari 8-bit floppy drives. If your power supply
has a 7-pin connector, it's probably a 5 volt DC supply made for one of
the XL/XE computers.

I'm not saying that a cart reader is a *bad* idea. I'm saying that using it as copy protection *is* as all currently registered users would effectivly be locked out from the upgrade without getting the hardware. The PCXF cable is a *good* idea and I support it with XFSIO (v1.05) myself (which you could check out at my WWW page if it wasn't down at the mo!)

Clarification:

Never PUT IN PRODUCTION, but prototypes do exist and are in the
hands of a few lucky individuals.

2783. UK magazine New Atari User - new issue?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-12 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <3195fbab@pianosa.demon.co.uk>
Source record: 83960

Whilst reading the usual rubbish I find here, William Moeller wrote something interesting to All about UK magazine New Atari User - new issue?:

Hello William,

WM> Well, this makes sense if they get a special magazine rate. However,
WM> adding a disk is not justification to losing the magazine rate. How

I agree with you. It just doesn't seem fair. However, it appears to be the case. :-(

WM> The added weight of a disk should not inflate the price that much, and

Maybe not, but everybody wants their cut. The postal rates are exhorbitant from the UK, once you get above 100 grams in weight.

Mind you, comparing costs: NAU costs 42 quid for 6 issues, inc. disk.

CU Amiga (another British mag) costs 78 quid for 12 issues inc. disk.

In both cases, this is what somebody in Canada would have to pay. Allowing for the fact that these things don't increase/decrease in price pro-rata, NAU doesn't seem that bad a deal. Especially when Page 6 Publishing do all their mailing manually, unlike EMAP, the owners of CU Amiga.

WM> Either way, NAU loses a subscriber.

Which is a great pity.

From: mark@alostend.demon.co.uk
Message-ID: <831925183.23455.0@alostend.demon.co.uk>
Source record: 83962

Hi, newbie alert, to news anyway!!!

Ex Atari freak (800XL) with hundreds of disks and a few tapes with loads of great software. However, being kinda lazy, has anybody got a nice collection of good commercial games already converted.

Yeah, i know this is COPYRIGHT risky but surely if i have already paid for the licence and it shouldn't matter in what format I have the games. Whats the rules on the matter ?

I have the old 800XL fully working with a 1050 drive which reads most of the time but doesn't write, the old Tape Drive, all original documentation inc the irreplacable Mapping the Atari XL/XE. And in the last 4 years PC'c with the current a 486DX4/100 with all the trimmings :)

Fan of IRC (haven't checked out the #atari8 channel yet)

Some crucial titles i have on 5.25" and want on XFD or ATR inc:

Universe, Aternate Reality, Boulderdash, Flip 'n' Flop (the wifes favourite), and MULE (the game not the prog that reads 180K disks)

Anybody got any advice mail me please!

Mark
I.S. Student Degree Year, Scotland

Cross-posted to: comp.sys.cbm,comp.sys.ti,comp.sys.apple2,comp.sys.apple2.marketplace,comp.sys.amiga.software,comp.sys.atari.8bit,comp.sys.mac.games.marketplace,misc.forsale.computers.other.software,misc.forsale.computers.mac-specific.software

I am posting this message for a friend without Internet access.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND BOXES, unless noted with a * which means there is no box. All opened disks have been tested and I will guarantee they work.

Rather than post separate for sale messages for each computer as I have done in the past, I thought I'd combine them into one large list so people could see everything I have available. If you are interested in anything, please read the end of the message before replying.

Items listed in this order:
Part 1. Commodore 64/128 game software (lots), datasette, 2 books
Part 2. Amiga 3.5" game software and book
Part 3. Apple II+/e business software, MIDI interface
Part 4. Atari ST and 8-bit software (no games)
Part 5. Macintosh 3.5" software (several games)
Part 6. TI-99/4A cartridges (several games/education), 1 book
Part 7. Computer books (a few)

Feel free to make reasonable offers on anything below. Few prices are firm, especially if you are buying several other items.

=== Part 1. Commodore 64/128 (all 5.25" disks) ================================

$2.50 each

Deceptor
Desert Fox
Force 7
GEOS Desk Pack I *
Sky Runner

$3.50 each

Blue Angels
Die Hard
Oil Barons (heavy package)
Paperclip 64 *
Paperclip Spell Pack *
PHM Pegasus
Print Power (+Atari)
Top 20 Solid Gold (Cosmi) *
Top Fuel Eliminator

TV Sports Football
X-15 Alpha Mission

$4.50 each

Ace of Aces
Beyond Dark Castle *
Beyond Zork 128 *
Border Zone *
Bureaucracy 128 *
Defender of the Crown
Grave Yardage *
Kings of the Beach *
Millionaire *
Monopoly (Leisure Genius)
Murder by the Dozen *
Nord and Bert *
Pipe Dream *
Tomahawk

=> If you buy all of the C64 software, I will take 50 cents off per package
and ship for free if you don't want the boxes (for items that have the box).

Hardware:
Commodore 64/PET Datasette.....$7

Books:
Commodore 64 Programmer's Reference Guide (orig schematics missing)...$5
Commodore 64 User's Guide (2).....$3

=== Part 2. Amiga 3.5" disks ==========

$5 each

Jack Nicklaus' Golf *
Midwinter
Pioneer Plague *
Warlock
BOOK: Amiga Hardware Reference Manual (Revised) - Addision-Wesley, 1989

=== Part 3. Apple II+/e (all 5.25" disks) ==========

Following is a list of Apple software and hardware I no longer have any use
for. Feel free to make reasonable offers.

ORIGINAL DISKS ONLY for 15 different PFS:File, PFS:Graph, PFS:Write, etc -
50 cents ea. disk - can provide a complete list if interested

Tons of Beagle Brothers Time-Out disks and manuals (no boxes) - DeskTools,
DeskTools II, Filemaster, Graph, MacroTools, MacroTools II, PowerPack,
Quickspell, Report Writer, Sidespread, SpreadTools, Superfonts, Thesaurus,
Ultramacros, Super Macroworks. If anyone is seriously interested in buying
the WHOLE LOT, please respond with your offer. Maybe I'm out of line, but

since these are valuable Appleworks utilities IMO, I was thinking around
$5 each. Correct me if they can be found elsewhere for less.

Probably good hardware (sold to me as working, kept in good condition, but
never used. I'll refund your money if they don't work):
Apple-brand MIDI interface (plugs into ADB port) - $16

Many issues of a specialty Apple magazine called "The Assembly Line". I can
provide a more complete list of issues if someone is seriously interested.

=== Part 4. Atari ==

Atari ST 3.5" software - $2 each
E-Z Track MIDI Sequencer - new, unopened (2 of them)
Personal Pascal *
ST Key *

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk -- will trade

=> Take all 4 Atari ST and 6 Atari 8-bit packages above for $20 + shipping

=== Part 5. Macintosh 3.5" disks ===

$2.50 each

Crimson Crown
Enchanted Scepters
Frogger (untested -- it may only run on a Mac 512K or possibly a Plus,
neither of which I have access to; disk seems error-free)
Ground Zero
Mastertype
Rival 1.1.4
Time and Magik

$3.50 each

Click Change 1.04
Corruption
Deja Vu

$4.50 each

Mac Plot, standard V3.4
Pools of Radiance
Status Mac - 1991, System 7 compatible, unopened

Strategic Conquest Plus - disks only - $1.50

Note: Some of these games are old and may only run on older Macintoshes
with System 6 or earlier.

=== Part 6. TI-99/4A ==

Working cartridges - no boxes

$3 each

Beginning Grammar, no docs
Connect Four, no docs
Household Budget Management, w/ docs
Munchman, w/ docs
Personal Record Keeping, w/ docs
Superfly, no docs
Terminal Emulator II, w/ docs and keyboard templates
BOOK: Programming BASIC with the TI Home Computer - Peckham

Cartridges WANTED (will also trade the above for or possibly buy):
Beyond Parsec, Bigfoot, Computer War, Frogger (Parker Bros), Hopper,
Jumpman Jr., Space Journey, Spy's Demise, Star Maze, and Tris.

=== Part 7. Books ===

Amiga Hardware Reference Manual (Revised) - Addision-Wesley, 1989..... $6
Commodore 64 Programmer's Reference Guide (orig schematics missing)... $5
Commodore 64 User's Guide (2)..... $3 ea
Programming BASIC with the TI Home Computer - Peckham..... $3

==

The above prices do not include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how
heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or
priority US mail. I don't have time to deal with lots of small transactions,
so I need to ask a minimum of $15 worth of items. If you buy a lot of stuff
at once, I will make you a deal on the shipping. In general, a few pieces of
software cost $4 or $5 to ship.

I will only ship within the continental UNITED STATES.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the message
or in the subject header: "Forward to Randall". Because these messages will
be hand-carried on floppy disk or sent to me via modem only once or twice
per week, it may take me a little while to respond.

The copy protection would be for PCXf itself, not other programs.
Especially is PCXf was to be distributed in a 16K bank-switched cart,
like the OSS/ICD programming language carts.

That's right. Before the XLs and XEs, a nice way to get 192 lines with 4 colors was to change a graphics 8 screen (Antic mode 15?) into what was then called "7 1/2" (Antic 14?).

I found the letter from Trip Hawkins in the April 1986 issue of Antic. Here
it is:

The response of your readers to Antic editorials is growing. We have
received quite a few letters, and because of the interest shown by Atari
users, we are planning the following hit products for the Atari 800
in 1986:
Adventure Construction Set
Heart of Africa
Mail Order Monsters
Marble Madness
Racing Destruction Set
Skyfox
Software Golden Oldies (Software Country)
Ultima IV (Origin Systems)

2796. NEW: XFD-Tools v0.1

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-13 00:00:00 UTC
From: ipoorten@cs.vu.nl
Message-ID: <DrCyJ8.F84.0.-s@cs.vu.nl>
Source record: 83973

Hi everybody!

Never thought of releasing this software, but a friend told me to do so!
Hence, I wrote a man page and bundled it together in a tar.gz file.

Description:

(http://pmwww.cs.vu.nl/home/ipoorten/Atari.8bit.Homepage/software.html)

This package contains unix tools for manipulation of XFD diskimages
which are used by several Atari 8-Bit emulators. It's possible to
read/write from/to diskimages and get a directory listing. Because
the read/write utils write/read to/from stdout/stdin (what a sentence :)
one can use them easily in conjunction with other unix tools. For example:

xfd_read img1.xfd BLA.1 | a2u | nroff -man | u2a | xfd_write img2.xfd BLA.ASC

At the moment, two filters are part of the package to convert from/to ATASCII.
Many other filters can be thought of, such as sound conversion and
graphics. In the (near?) future, those will be added. Contributions
are always welcome. As always, this package is on our local
FTP server.

To Download:

point your browser to:

http://pmwww.cs.vu.nl/home/ipoorten/Atari.8bit.Homepage/software.html

or get it directly from:

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit/xfdtools.v0.1.tar.gz

Enjoy it! Comments and contributions are welcome, as allways, flames to
/dev/null...

later!

2797. Memory upgrades for 65 XE ???

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-13 00:00:00 UTC
From: Mariano Dominguez Molina <mariano@ce.fciencias.unam.mx>
Message-ID: <3197C4B8.41C6@ce.fciencias.unam.mx>
Source record: 83974

Hello:
I would like to build a 256 K or more memory expansion for my atari, I have the diagrams for a Bucholz expansion, but i don't know if i can use it, (should i buy a 800 XL?).

Does anybody knows if there is an upgrade for 65 XE?, and in that case is 130 XE compatible?

Thanks in advance.

Have you forgotten that this is comp.sys.atari.8bit? CD-ROM is fine for
storing encyclopedias and phone books, but it encourages bloated,
memory-hogging software like Windows 95, which requires RAM as big as last
year's hard drive. And it is odd that, even before the CD-ROM, cartridges
were not more popular on "serious" computers like IBM and Macintosh.

Actually, no. But the poster I was commenting on was talking about
implementing some sort of cartridge standard on PCs today.

> CD-ROM is fine for
>storing encyclopedias and phone books, but it encourages bloated,
>memory-hogging software like Windows 95, which requires RAM as big as last
>year's hard drive.

I agree that CDROM's vast capacity does encourage the sort of behavior
that you describe. And I don't like that one bit, however, Win95 is
a poor example of the CDROM abuse. Win95 is indeed bloated also in my
opinion, but not due to the existence of CDROMs, it is bloated mostly
due to the baggage that it carries - backward compatibility. I'm sure
there are other reasons as well, e.g. supporting every little feature
that most people donot need, but the main reason for the high complexity
of the operating system is the backward compatibility. I'm sure Linux
wouldn't be what it is today had it started with a goal of bulletproof
MSDOS and Win3.1 compatibility. So let's not bag on Win95 too much -
I am very well aware of its problems..

> And it is odd that, even before the CD-ROM, cartridges
>were not more popular on "serious" computers like IBM and Macintosh.

This is probably a marketting thing. I would have done the same in
their position.

2801. Disk formats?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-13 00:00:00 UTC
From: John Haberfellner <JOHN@ATITECH.MHS.CompuServe.COM>
Message-ID: <19960513233311.aaaa000Uk@babyblue.cs.yale.edu>
Source record: 83978

Does anyone have all of the possible disk formats for the Atari 8 bit?

By this I mean how many tracks, sectors/track and bytes/sector and
wether sector 0 is the innermost or outermost track, for
all of the versions of Atari DOS/MyDOS/SpartaDOS. I'm also looking
for information on where to find and how to interpret the volume info
(VTOC) for all of these different DOSes.

I'd appreciate any help I can get in figuring this out.

John Haberfellner.

P.S. Is there a web/ftp site I can get this information from?

2802. Integrating Netware & Atari 8bits

Gave me trouble too. You need a second joystick plugged
in to use the other weapons.

Use the second joystick. I forgot which one was what, but if you move the
second joystick a certain direction, it would activate a certain weapon
(use the fire button as usual). It kind of makes for clumsy gameplaying,
but once you get the hang of it, it's not so bad. I usually played with
the second joystick in-between my legs...not too comfortable. :)

Of course, maybe it's best that you get someone to help you...

It should work, but only up to 9600bps. The 850 wasn't designed to do anything faster than that. I would suggest the CSS Black Box if you need faster speed for I/O.

Yes, there are two xl/xe emulators for Linux, Ace and Atari800

Atari800 is the better of the two. It is well developed, and it is capable
of running things that other emulators can't.

Ace is in a fairly early stage, but looks promising.

I don't have the addresses for them, but a good place to look is:

You can use any standard _extenal_ modem w/ an 850 interface or PR
connection.

If you use APE you can use a internal or external modem at upto 57600kbps,
with flow control. Thats about 3x faster than an 850 interface or pc
connection can deliver data.

Hello ...
you can use the other weapons with a second joystick, pull down to
change weapon and push trigger to use it, so you can use the smoke
screen and the oil...

using two joysticks makes the game difficult, so you can build a
joystick or adapt a 3 -button one.

> it to the shelves for the 8-bit?

I suppose it was just as well. I tended to feel most of the stuff that EA released for the Atari were substandard translations, when compared to the C-64. It was like whatever programmers they hired only marginally knew the Atari system, and this just gave us a flat or watered down version. It always irritated me to see cruddy graphics or simple sound effects and no music (either that or it was poorly done) that poorly reflected the system. So as a result, I never really bothered to pick up too many of their titles.

Activision had this problem early on; their earliest games for the Atari computer looked almost exactly like the 2600, with little adjustments. Makes sense, I guess, since that's where the games originated from. <g>

I say let HIM burn an 80MB Microsoft Word cartridge. The reason will probably
be clear by the end of the ordeal.

-Michael Ellis

BTW, how do you suppose the memory map would look for a given computer after
you've blocked off a number of 128 megabyte portions of RAM for use in multitasking
cart software (presumably, you could multitask the carts in the various ports, and
no more). What a mess...

A 14.4K modem will work with a MIO, BlackBox and a P:R:C
but I'm not sure if it will on a 850. I once heard that some will and some
won't handle over 9600. No CTS/RTS flow control. Stickly XON/XOFF
software control.

> have the diagrams for a Bucholz expansion, but i don't know if i can use
> it, (should i buy a 800 XL?).

If you have the original 800 or 400, it won't work. The Bucholz
expansion is for the 800XL.

> Does anybody knows if there is an upgrade for 65 XE?, and in that case
> is 130 XE compatible?

Yes. The 65XE is harder and requires a custom part out of the
130XE. The 130XE is mostly wiring after you have the 2nd bank of 64K
chips replaced with 256K. If I remember correctly, it just requires a
74LS158 and a couple resistors (besides the 8-256K RAMs). It amounts
to a lot of de-soldering and soldering because the RAMs are NOT mounted
on sockets.
Also, there are the NEWELL upgrades, up to 4Megs but not
recommended. The 1Meg upgrade is the best and most compatible
800XL or XE are available - 1200XL also.
Newell upgrades are available from B&C Computer and Fine-Tooned
Engineering. Maybe Best Electronics.

The fire button on joystick #2 controls the oil slick/smoke screen and the fire button on joystick #1 controls machine gun/missiles. The computer picks the slick/screen at random (if you have both) and it automatically will fire a missile if a helicopter is around (and you have the missiles).

I recently sold a bunch of my Atari stuff, here's what I have left...
$70 + shipping gets it all, otherwise asking the prices listed.

Software:
LJK Letterperfect Wordprocessor (w/original binder /manual)

LJK Dataperfect Database (w/manual)

LJK Disk Utility (w/manual)
++LJK Wordprocessor and Database were reviewed as the best available for
the Atari 800 when the computer was current++All 3 LJK products Asking $25
+ shipping

Atari Bond Analysis
Atari Stock Analysis - Asking $5 + shipping for both Analysis programs.
======================
Games ($6 ea,+shipping, otherwise $50 + shipping gets all the games in
this section plus about 30 floppy disks (they've got stuff on them - use
it or erase it plus a hole punch thingie to punch the side of the ss disks
so they can be used on both sides) :

Jumpman
Castle Wolfenstein
Temple of Aphshai
Deadline
Infidel (w/invisiclues booklet)
Coast To Coast Highway
Leather Godesses of Phobos (even the scratch n' sniff stuff still works)
(games have original documentation - most have original packaging)
Jupiter Mission (backup disks & documentation)
ZORK 1 Maze Map (sealed in plastic laminate)
======================
Books:

The Creative Atari by David Small, et al. (orig. 15.95) $5 + shipping
Atari Basic Quick Reference Guide (card)
======================
Magazines:
The entire selection below $10 + shipping

2831. Announce: XL-it! Version 0.13

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-15 00:00:00 UTC
From: Markus Gietzen <iig05-1@htw.uni-sb.de>
Message-ID: <3199C842.7F38@htw.uni-sb.de>
Source record: 83858
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

XL-it! Version 0.13 is now available from this site:

"http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html"

XL-it! is a freeware Atari XL/XE emulator for MS-DOS (>=i386).

Altough it is still in an early stage it runs already many
of our loved games.

This is a fraction of the games which are working:

- Boulder Dash, M.U.L.E., Alternate Reality, BlackLamp, Plastron
- Schreckenstein, Ninja, Mario Brothers, Ballblaster, Pitfall
- Xevious, Defender, DigDug, Asteroids, Choplifter, Missile Command
- Frogger, BlueMax ...

New features:

- Write-support
- support for 4 drives
- 2-3 times faster
- Monitor: assembler, modify memory, search memory
- several bugfixes

Bye,
Markus

A program called ADIR on my web page (see below) directories and
extracts from single density AtariDOS/MyDOS disks. The source
code (in C) can also be obtained from the web page so you extract
the volume information from there.

There seems to be a lack of information on higher densities. So if
you find anything else out then please let me know.

Atari Misc for sale

The XF551 Enhancer (25$) - this upgrade restores 100% compability with previous disk drives for the Atari 8-bit, while retaining the advanteges of
it's double=sided design.

XF-Dual 5.25/3.5 drive upgrade from C.s.s (30$)

The XF Update from C.s.s ($25) this upgrade is a new operating system for
the XF551, that runs more commercial software, changes density properly,
supports ultra speed data transfer etc... this upgrade comes with an IBM/ST transfer utility.

CONVOX Voice Master ($35) this hardware can record and playback speech and
have a speech word recodnition utility, the packedge comes with docs and disk.

Pro Burner Cartrige (50$) this is a rare cartrige from Thompson electronics,
the Pro burner Cartrige is a general Purpose EPROM programmer for the Atari
400,800,600xl,800xl and 130xe. it handels all common Eproms (2732/A-27128/A)
and a veriety of single voltage supply EEPROMS and all the atari roms.
the cartrige comes with a manual.

A/D CONVERTOR ($50) this is a sound sampling cartrige from Mirage software -
poland, and was also sold by A.N.G. with this cartrige you can sample sound
up to 21khz, the cartige have an audio input. and it comes with a disk with
diffrent utility to sample and playback digitized sound.

MIDITRACK III (50$) a MIDI recorder, MIDI synchronizer and MIDI remote control
system for 130xe/800xl computer. this packedge cames with the interface, docs,
disks etc... i will also include few extra utilities for the Miditrack like:
K3 wavetable editor and more, will also include a manual for the Miditrack 2

Flight Simulator 2 cartrige and disk (15$) box and manual.

65XE 128K memory upgrade (15$) upgrade your 65XE to 128K

RANA 1000 disk drive (35$)

INDUS Gt DISK drive (35$)

The XF35 kt (20$) it's a 3.5" Drive conversion the the Atari Xf551
Owners

Quintopous Delux (30$) use the quintopus to connect one end of the
SIO cable to your computer
and the other end to port on the quintopus, conncect up to 5
peripherals directly to the quintopus.
elimenates the use of a daisy chain connection.

Cartriges no box:
(3$ each) star raiders, captain beeble, concotes, squish em, b.c.s
quest for tires, time bounds,
galaxian

(5$ each) Hard Ball, One on One, Desert Falcon, Karateka,

850 Interface no power supply or manual (10$)

XF351 DRIVE (75$) include power supply and disks

I have few more items i need to add to this list....

the prices are not includoing postage.

>but ise ATASCII, compressed with ARC if you wish.

Actually, since GIF is copyrighted by CompuServe, and since CompuServe started actively enforcing that copyright a year or two ago, GIFs have been disappearing and JPEGs are now far more common. (Has anybody ACTUALLY INVESTIGATED the issues/feasibility of doing a JPEG viewer, or at least a printer (should be easier: print in strips, requiring storing only PART of the image at a time), for the Atari 8-bit? Jeff Potter? :-))

In any case, I highly doubt that anyone is going to be browsing the Web (in a graphical manner, anyway) with an Atari 8-bit, so the format of the graphics seems to be somewhat irrelevant on that basis. It might be fairly simple to store TWO versions of each graphic: a JPEG version for high-resolution, inline (or not) Web-browsing readers, and some sort of Atari-8-bit-specific (maybe just GR.8 screen memory dump), lower-resolution version that could be easily handled (viewed, printed) on the 8bit with existing tools or simple extensions of them. The extra overhead of storing this second version of each graphic ought to be fairly minimal, compared to the resources ALREADY required for JPEGs and websites in general!

Comments?

> Three of their sorry titles come to mind right off the bat:
>
> Kaboom!

> Demon Attack

It was actually Imagic. They're the ones that super-botched up the home translation of the "Star Wars" arcade game (but it was Parker Bros. who released it). Anyway, I
never understood the popularity of "Demon Attack"; I remember that when it came out, it was like the first major title released for the 2600 that didn't come Atari. And when I finally got to play it; it was like... "Huh?" I got tired of shooting endlessly and mindlessly very quickly, never mind fact that the aliens changed each wave. I had no patience to find out what they were!

> Pitfall Harry

Actually, the original "Pitfall!" wasn't all that bad; the graphics were more colorful and smoother (although the sound was unremarkable) -- it was the "The Lost Caverns" sequel that looked like the 2600. But I suppose that was made up for the fact that it included the big bonus game when you "won." I was told that none of the other systems had this extra part -- not even for the C-64. That portion of the game was really tough, as it required fast (really fast) reflexes and superb timing. Once, I remember it took me like three hours to win that (back in '84).

> While they were considered "classics" on the 2600, it amazed
> me that they didn't even attempt to dress up the sound and
> graphics for the computer versions.

The defunct magazine, "Computer Games" used to give high marks for those games in particular, even if the translation was just "flat." I guess one reason was that it maintained the gameplay and feel, which was pretty important to them.

Source record: 83869

Hi everybody....

I have investigated writing a JPEG viewer for the 8-bit. It would seem to be a *lot* easier for the 65816, as the native number format in JPEG is 16-bit signed integer. If I get encouraged, I may pick it back up.

I did write a viewer and printer interface for the TIFF protocol. This is a fairly widely used format, with lots of extensions (that I did not support). The printer drivers were for Epson 9-pin and Epson and Citizen 24-pin.

I agree there should be two formats. I have access to a high speed link
so I don't mind getting large GIFs/JPEGs but I think there may be a fair
few Atari people out there running on low baud modems. Doesn't most modern
day scanner software provide character recognition? If this is the case
then a plain text version would be the best format.

Source record: 83873

My web page http://www.netlink.co.uk/users/helix/atari8/
now includes "Monitor" a 6502 Disassembler that runs on MSDOS
systems. Ideal for loading and hacking around with Atari files from
BBSs, FTP sites, or extracted using other utilities available from
my web page.

A list of features available in V1.0 is as follows:

* Multiple panes. allows a disassembly of subroutines etc. to be
viewed at the same time as their calling code;

* Atari mode. Equates are used instead of memory addresses;

* Hex Dump;

* Offset. Modifies the offset of the loaded file so that jumps
etc. can be resolved easier;

* Analyses the header of AtariDOS/MyDOS files providing load
address, run address and a suggested offset;

* Modify memory;

* Search memory;

* Load / Write file. (Current max file size is 48Kbytes);

* Converts Dec<->Hex.

I think that's a bit over doing it. Multitasking the emulator with other Win programs is enough. I don't think the 8-bit system could handle such complex stuff. Not that that would be a bad thing. There were a few attemps early-on to do multitasking in the 8-bit computers, but they would swap out blocks of ram ro disk and insert others. I believe the program for this was Snap Shot. It did nothing with carts. However, the OSS/ICD carts do something like this with their stacking. You could have your R-Time 8, SDX, and BASIC XE carts stacked and switch from one to the other for what ever you needed. I've had this configuration lots of times. It works beautifully!

The best would be to OCR the scanned images and convert to web-browsable
html, and leave the figures as gif. JPGs are awful for high-contrast
black and white line diagrams. Most often the resulting file size will
be larger than that for the equivalent gif file.

SSS tt eeee lll lll aaaa 999 666 0.2

================================================================================
A Bradford W. Mott production in association with Seunghee Lee!
================================================================================

Stella 96 is an Atari 2600 emulator. Currently, it is a work-in-progress
and should be consider ALPHA level software. However, you can play
games starting with this release. This release consists of a source code
distribution that's known to compile under Linux using GCC 2.7.2 (it may
compile on other Unix machines as well). This distribution does not
contain any 2600 ROMs and please don't write me asking for ROMs because
they're copyrighted! If you own any of the Activision Action Packs you
can use the ROM images from it with Stella 96.

Supported Systems
=================

Stella 96 is currently supported on the following systems:

* Linux 1.x.x (SVGALIB, X-Windows)

* Stella 96 should compile under most Unix operating systems as long as
it has X-Windows install. However, the current support for using the
keyboard as a joystick is not very good.

Required Software/Hardware
==========================

Stella 96 requires the following software and hardware:

* ANSI C++ Compiler (GCC 2.7.2 is known to work)

* SVGALIB and/or X-Windows

* Linux kernel joystick driver (not really required but strongly suggested)

* 2600 ROM images

* At least a 486 DX4 100 with a fast video card
```

Distribution Site
==========

The Stella 96 distribution can be obtained from the Stella 96 home page at:

http://www4.ncsu.edu/~bwmott/www/2600

Contacts
========

If you have any questions regarding Stella 96 send mail to:

Which of JPEG vs. GIF is better (at compression anyway) is usually
determined by the content. Photos of real world scenes compress
better in jpeg; and stuff like line diagrams or nondithered 16-color
diagrams are better in GIF.

If the images are stuff like circuit schematics or other line
diagrams, though, I suggest bilevel TIFF using packbits or FAX
compression. Even _I_ could write a viewer for bilevel TIFF display.

The only difficuulty I see with "plain text" versions is that -- as I
understand it -- we're talking about DIAGRAMS and GRAPHICS here. I for
one am inevitably frustrated by manuals which attempt to render diagrams
using text characters; they look ugly and primitive and make the portions
of the diagram that actually ARE text hard to separate, visually, from
the parts that are supposed to be "lines" etc.

On the other hand, Ivan, you have a valid point, and it's almost
certain that "plain text" renditions of a diagram will be even SMALLER
than even the simplest "graphical" rendition.

Okay, so for an even SMALLER bit of just a LITTLE MORE overhead, we
can put graphics up in THREE forms: JPEG/GIF, Atari-specific graphic,
and plain-text. THAT shouldn't be too difficult to do. Eh?

>
> - Peter

Yeah, why isn't he "for real". Guess what, cartridges have been developed
that have megabytes (not megabits) of storage... and they aren't slower
than CD-ROMs, cause CD-ROMs, at least until recently, have been dead slow.
The reason why everything is on CD-ROM these days is cost. Period. CDs
are cheaper to produce than disks or cartridges. It costs more to make
a production run of cartridges than CDs.

Very few CD-ROMs use the capacity of the CD-ROM... it is just cheaper to send
one CD than 10 3.5" disks.

After being out of the Atari for 10 years, and getting back into it, I
find that pitfall ii is still a lot of fun to play- the best I was
able to finish it in was about 18 1/2 minutes (I used to put on this
one cd while playing). I can still finish it but it took me about 45
minutes this time. One of the best 8 bit atari games, IMHO.

Actually, Compuserve isn't the culprit behind the GIF situation.

Compuserve used the Lev-Zimpel-Welch (LZW) compression scheme in the
definition of the GIF file format. Unisys had been granted a patent
on that format (yes -- it's an invention that is non-trivial and can
be patented). Compuserve ended up forking over a tidy sum in past
royalties, and as a consequence of the settlement with Compuserve
Compuserve now collects a fee for any one producing a program that
creates files in the GIF format (and promptly turns over the
money to Unisys). Programs that simply display images from GIF
files do not require the royalty.

But none of this prohibits people from creating and posting new gifs. Compuserve only wants royalties from people who sell new programs that create them. If you use a modern scanner on a PC or a Mac, the provided software could very likely stuff the image into whatever file format you want. The discussion seems to have deviated into whether writing a program to scan the docs and write a GIF file is feasable.

A documentation archive would be invaluable. Now a days, when someone purchases an Atari 8-bit piece of hardware or software, it rarely comes with a power supply much less the directions.

2868. XE GAME SYSTEM HELP!

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-17 00:00:00 UTC
From: Josher <jmickman@ix.netcom.com>
Message-ID: <319C1DCC.6DBD@ix.netcom.com>
Source record: 83891

I was helping my mom move when I came across my Atari XE game system computer. I haven't seen it in about 7 years. The keyboard line is broke and so is the power cord(I could probly fix that). I have several games. I need information on a repair place(Somewhere in Minnesota preferred). I also need info on where I could buy stuff for this system(Disk Drive, Printer, Games, etc.).

Please e-mail me with info.

ALL HELP IS APPRECIATED!

Thanks!

-Josh Jones

Jeff, Good to see your name pop up here. I've been off GEnie for a while and had no internet/usenet access for a while.
Absolutely! Build it! Distribute it! Anything new like this is always exciting and welcomed. When it's done, I'd like to get updates for all of your projects since Colorview 2.6. Let me know how much you want and I'll send it to you. Maybe you could e-mail me a list of your projects since CV2.6.
One of these years I will get back on ColorDump 2.0. It's in progress and has a much faster image to bit-image data conversion, but I never finished to printer driver part. The menu selections have grown a lot too. I'll send you a copy when I finish it.

Look for the Atari 8-Bit Vendor and Developer FAQ, which is regularly posted in this newsgroup. You might find it by searching ftp://rtfm.mit.edu or http://www.dejanews.com . Also, check your local thrift stores and flea markets. Finding a used machine can be cheaper than repairing one. An 800XL or 65XE is almost the same as the Game System, except that they don't have the built in Missile Command and the removable keyboard.

Do you mean Atari 8-bit or ST/TT/Falcon? I've never seen a virus for the
8-bit. Not that it wouldn't be possible, but there isn't much room to
hide one in 64K RAM and 90K floppy disks (some users have more, but most
software does not require more than that). Only a small percentage of
8-bit users have hard disks, which is where viruses usually hide and
do their mischief.

2874. transfer prg between st and xl

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-17 00:00:00 UTC
From: apc08fi@apc1-ln.uni-duisburg.de
Message-ID: <4nhnls$7s8@h20-hrze.uni-duisburg.de>
Source record: 83897

hi out there,

i am looking for people, who own

- an atari st with a 5.25 floppy disk (drive b:)
- an atari 800xl or similar with a atari 1050 floppy.

Perhaps you can help me testing my transfer program I have written
for the st to read and write all normal 1050 enhanced density disks
(the MFM type which is created by the i option of the DOS 2.5 with 133120 bytes).
It works fine with all disks when i am using my newer atari 1050
floppy from about 1988 (platine rev 2). I am able to transfer disk images
from the st to the xl and vice versa using DOS 2.5 disks, save the
disk images on the st side, look at the directories and so on.

But when I am using disks formated with my older 1050 (1985-86,
platine rev. 0), there are some problems rereading disks which are
newly written on the st side. So the st also reads the disks of this
floppy but the 1050 does not accept disks written on the st.
There are only a few sectors which are not accessible. I guess it is
a sync problem which perhaps can be solved by a special track format.

But first i want to ensure that it is a common error. Anyone interested
in beta-testing ? Any help appreciated.

Please email to

apc08fi@apc1-ln.uni-duisburg.de

I have a problem:......

I have a few copies of an old atari 8bit game published by Avalon Hill, called Close Assault. It is a computer moderated wargame, with a hex board, counter pieces and play against a Human Opponent or an AI.

It is apparently written in Basic, and probably compiled or otherwise protected from hacking.

I want the orignal Atari Basic code, so that I can rewrite it in Microsoft Visual Basic v4.0

can anyone help me out? Is the a hacker that can crack this, decompile or unprotect it, and gimme the Atari Basic code?

Paul....

Stan Lackey (whose address Portal does not pull in for me here) writes:

>Which of JPEG vs. GIF is better (at compression anyway) is usually
>determined by the content. Photos of real world scenes compress
>better in jpeg; and stuff like line diagrams or nondithered 16-color
>diagrams are better in GIF.

Interesting; didn't know that. Probably because JPEG sticks to 24-
bit data, whereas GIF provides the capability to pare down its palette
to however few colors are actually in the image. Is that it, or am I
way off base?

>If the images are stuff like circuit schematics or other line
>diagrams, though, I suggest bilevel TIFF using packbits or FAX
>compression. Even _I_ could write a viewer for bilevel TIFF display.

Hmm, so could I, as long as I had access to the public-domain TIFF
library -- but TIFF seems like almost "overkill" for saving bilevel
information... The overhead is going to be larger than the data...
On the other hand, it's PORTABLE... though whether the TIFF library
will be portable enough (read: small enough) to fit on the Atari,
is at present an open question. :-)

I suppose I could pick through the TIFF spec and cobble up a limited
TIFF reader that could handle bilevel and nothing else... :-)

Sorry, I don't have the setup you are looking for, BUT;
The older 1050, I think if you look at the PROM rev you will find
it is a rev K. If you change this out for the rev L PROM, it should
work. Somehing to do with the original Atari DOS 3 and the
later DOS 2.5. There is a simular problem with the INDUS GT
drive, the older ones for DOS 3 and the later ones after DOS 2.5
was released. (All those marked 'Future Systems' are Okay.)
On a simular note, a XF551 upgraded to a 3.5", 720K
drive by Bob Puff of CSS you can READ a ST/PC formatted
720K disc on your 8Bit. The upgrade comes with a utility to do
this and it does work. However, you can NOT WRITE to Disc
from the 8bit. This is how I've been moving programs and .TXT
files from my ST/Falcon, to my 8Bit.
I would be very interested in a program for the
ST/FALCON that could read a SpartaDOS formated, 720K
disc. Read and Write would be even better.

Hope this helps; Rich Mier

Scott,

From my limited understanding of the issue, the GIF Encoding/Compression
is under copyright.

Good ideas (that have potential profit) are worth copyrighting or
patenting, don't you agree?

>web page....

I got their catalog, as it were. Four photocopied pages (front & back)
peppered with prices scratched out and re-written. Looks like they
made a little effort at alphabetizing the lists, but didn't quite
make it. All the A's are together, all the B's are together . . .
other than that it's completely random. Sifting through the lists is
a chore. Figure if the printed catalog is assembled this shabbily, a
web page would be a disaster.

No great shakes on what they have. In fact, it's pretty disappointing.
Shrinked 2600 games bottom out at $10, loose carts start at $2 for
even the most obnoxiously common titles (Combat, ET, Pacman), shrinked
7800 games for either $20 or $30, and 5200 games for between $10 and
$20. Worst price gouge of all is $50 for a used 2600 console. You
heard correctly, **fifty clams** for what everybody's picking up by
the carload at thrifts for nothing. Only one or two things of even
moderate interest to me as an Atari 26/52/7800 buff, and my collection
is positively puny compared to most others.

Best Electronics has much better deals for most of the same stuff.
Shoot, even Radio Shack prices can match a good number of them.

In short, it somewhat resembles the larger FS posts on rgvc, with
all the random junk somebody might have accumulated from thrifts and
fleas, except the prices are a bit out of line.

One man's opinion.

2883. Upgrading my 65 XE to maximum ??

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-17 00:00:00 UTC
From: Mariano Dominguez Molina <mariano@ce.fciencias.unam.mx>
Message-ID: <319CC4BB.167E@ce.fciencias.unam.mx>
Source record: 83906

Hello, again ...
I want to make a lot modification to my 65 XE in this order

+Memory upgrade (256K or more)
+PAL/NTSC upgrade
+6502C -> 65216 (?) sweet-16 upgrade

(I'm crazy, yes)

A few questions :
Are these compatibles ?
I don't have any diagrams and i'd like to build these,
where can I find it?

TNX.
M.

2884. Atari Equipment For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-18 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <4njhgd$ffp@main.freenet.hamilton.on.ca>
Source record: 83811

I have the following surplus Atari equipment which I will accept offers on:

I reserve the right to reject the best offer if in my opinion, it would be better to keep said item as a backup.

The Multiplexer, with 1 Master and 3 Slaves. Possible (not confirmed) problem with (NEVER USED) third Slave cart. The cart seemed to switch Ident numbers during a test. Unknown potential problem. AS IS. (Original master and slaves work fine)

Black Box ***CASE****.

Offers from outside of USA only. Reason? CSS charges double to ship to Canada. With exchange and taxes, I spent way more than $40 US on this. I expect an offer of around $30. Someone outside of the USA would prefer to purchase this used from me rather than pay twice the shipping and related taxes.

Adaptec 4000a controller board.

Rtime 8

Express Cart terminal

Atari 810 disk drive with "The Chip"
Comes with instructions and software disk.

CSS Hard Drive Backup Program.

Wico Track Ball

Atari XE Light Gun

Please make offer in US funds. Shipping paid by purchaser. (Note: Shipping from Canada is twice as expensive as to Canada from the USA) Will not be responsible for lost shipments if purchaser does not insure! All items are working and in excellent condition except where noted.

Please leave Email to William Moeller at af332@freenet.hamilton.on.ca

Note: To Rec.classic.video.game people. The Atari 8-bit may be somewhat like the Atari 2600 VCS in that it uses "carts" for some games. However, the Express Cart, R-time 8 cart, and Multiplexer carts are not "collectibles" unless you are willing to make a serious offer. The MUX Express cart and Rtime 8, are worth $300 US funds new. I recently got an offer from someone who would take all the above items "off my hands" for $14 US funds. Ya right....

2891. Yours For The Shipping!

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-18 00:00:00 UTC
From: sgwallace@delphi.com
Message-ID: <JHOPZV+.sgwallace@delphi.com>
Source record: 83818

5/18/96
So far there hasn't been even one inquiry about this
printer. Afraid someone already got it - or do you mean
it's not even worth GIVING away?

C'mon, think! You or somebody you know MUST be able to use
a printer for their Atari 8-bit system. This useful
peripheral would look neat sitting next to an XL because its
color scheme matches the Atari XL line of computers
(chocolate brown lower section with cream white top).
However it will work WITHOUT AN INTERFACE with an Atari
XEGS, 130XE, 65XE, 800XL, 600XL, 1200XL, 800, or 400
computer. A hinged smoked plastic cover allows the plain 9
1/2 X 11 inch pin feed fanfold paper to be seen as it is
being printed by the reliable "uni-hammer" type dot matrix
print head. Print speed is 50 cps unidirectional. The pull
tractor keeps the paper aligned and will accommodate paper
widths from 4 1/2 to 10 inches. The printer's 132 character
set includes international characters. It'll print 80
characters per line, or 40 double wide characters, and will
underscore. Its bit image graphics mode prints up to 480
dot columns per line. The printer stands about 16"W by 10"D
(not including a 5" rear paper shelf) by 5"H and weighs
about 10 pounds.

It's yours - ready to print - no strings attached for the
cost of U.S. shipping. You'll get the printer in its
original box plus extra ribbon cartridges, SIO cable,
owner's manual, service manual, and disk with TextPro and
Koala Print configured for it if you have a disk drive.

I'd like this printer to be hooked up to an Atari 8-bit
system so a kid could print their homework, or so a budding
programmer could print out program listings. It's not been
in use for a couple of years but still works fine. It's
taking up room. Think it over. If you or someone you know
could use this printer, e-mail me - sgwallace@delphi.com.
You CAN get something for nothing.

Steve

2892. seeking anti-virus software for Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-18 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <319e41ab@pianosa.demon.co.uk>
Source record: 83819

Whilst reading the usual rubbish I find here, Chris Brown wrote something
interesting to All about seeking anti-virus software for Atari:

Hello Chris,

CB> Probably not, seeing that there are VERY few viruses for teh 8-bit..
CB> (like.. maybe.. uh.. one?)

And that one being Atari, no doubt. :-)

It's pretty neat overall, but when I try and play M.U.L.E. the P/M
priorities are screwed up. It's not really so bad, but when you're moving
around town you end up being underneath it and not able to tell where you are.

It depends on what system you are using. The 400 and 800 did use the
NMI for the reset key. (That's why when the system locks up, pressing
RESET doesn't do anything.) However, the XL and XE series have the
reset button wired directly to the hardware reset line on all the
important chips, and that's how resets are done on those systems.

Updating atari archive information. The current LIST of about 500
titles is available from my homepage
http://mars.superlink.net/scharles/
but currently the software is NOT there (yet). I will be happy to send
it via email, and once again, if anyone has anything not on the list,
would appreciate emailing it to me. Also, there will be an ongoing
column there for those who wish to learn about copy protection schemes
on the 8-bit (and how to remove them), along with the documentation
for OMNIMON XL in html format, for those of you that bought an 800xl
or 130xe that has "This strange chip inside it. What does it do?" :)

2896. Reset key

Newsgroup: comp.sys.atari.8bit

From: uglmiller@cc.memphis.edu
Message-ID: <4nk8dq$bq2@oolong.memphis.edu>
Source record: 83823

What exactly happens when the user presses RESET? Mapping the Atari claims that an NMI occurs, but my tests indicate otherwise. Disassembling the NMI portion of the ROMs showed that no RESET NMI is ever checked for, so it must be catching it some other way. Anyone know?

quit

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.
```

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, public domain software/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

More BRIEF Definitions

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware - protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

===>> Much of what is popularly referred to as PD is really Freeware! <<<==

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine, published by Robert Boardman and Howard E. Carson; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this

list, please do your part in keeping it useful for everyone!
